## ACCESSION NUMBER RANGES

Accession numbers cited in this Supplement fall within the following ranges:

**STAR (N-10000 Series)**    N 75-29996—N 75-32000

**IAA (A-10000 Series)**    A 75-41899—A 75-45158

This bibliography was prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by Informatics Information Systems Company

# AEROSPACE MEDICINE AND BIOLOGY

## A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 148)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in November 1975 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA)*

Scientific and Technical Information Office  
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

DECEMBER 1975  
Washington, D C

**NASA SP-7011** and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, **Aerospace Medicine and Biology (Volumes I - XI)** should be directed to NTIS.

**This Supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161 for \$4 00 For copies mailed to addresses outside the United States, add \$2 50 per copy for handling and postage**

# INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* (NASA SP-7011) lists 245 reports, articles and other documents announced during November 1975 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964, since that time, monthly supplements have been issued.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes—subject and personal author—are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1975 Supplements.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A75-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc (AIAA), as follows. Paper copies are available at \$5.00 per document up to a maximum of 20 pages. The charge for each additional page is 25 cents. Microfiche<sup>(1)</sup> are available at the rate of \$1.50 per microfiche for documents identified by the '#' symbol following the accession number. A number of publications, because of their special characteristics, are available only for reference in the AIAA Technical Information Service Library. Minimum airmail postage to foreign countries is \$1.00. Please refer to the accession number, e.g. (A75-10763), when requesting publications.

## STAR ENTRIES (N75-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail NTIS Sold by the National Technical Information Service to U.S. customers at the price shown in the citation following the letters HC (hard, paper, or facsimile copy). Customers outside the U.S. should add \$2.50 per copy for handling and postage charges to the price shown. (Prices shown in earlier *STAR* volumes, 1962-1974, have been superseded but may be calculated from the number of pages shown in the citation. The price schedule by page count was given in the last *STAR* issue of 1974 or may be obtained from NTIS.)

Microfiche<sup>(1)</sup> are available at a standard price of \$2.25 (plus \$1.50 for non-U.S. customers) regardless of age for those accessions followed by a "#" symbol. Accession numbers followed by a "+" sign are not available as microfiche because of size or reproducibility.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Unit.

**NOTE ON ORDERING DOCUMENTS** When ordering NASA publications (those followed by the "\*" symbol), use the N accession number.

NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number.

Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other report number shown on the last line of the citation not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail SOD (or GPO) Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard \$2.25 price, for those documents identified by a "#" symbol.)

(1) A microfiche is a transparent sheet of film 105 by 148mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail NASA Public Document Rooms Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave, S W, Washington, D C 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory

Avail ERDA Depository Libraries Organizations in U S cities and abroad that maintain collections of Energy Research and Development Administration reports, usually in microfiche form, are listed in *Nuclear Science Abstracts* Services available from the ERDA and its depositories are described in a booklet, *Science Information Available from the Energy Research and Development Administration* (TID-4550), which may be obtained without charge from the ERDA Technical Information Center

Avail Univ Microfilms Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) at \$10 00 each and microfilm at \$4 00 each regardless of the length of the manuscript Handling and shipping charges are additional All requests should cite the author and the Order Number as they appear in the citation

Avail USGS Originals of many reports from the U S Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this Introduction The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction

Avail HMSO Publications of Her Majesty's Stationery Office are sold in the U S by Pendragon House, Inc (PHI), Redwood City, California The U S price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI

Avail BLL (formerly NLL) British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England Photocopies available from this organization at the price shown (If none is given, inquiry should be addressed to the BLL)

Avail ZLDI Sold by the Zentralstelle fur Luftfahrt dokumentation und -Information, Munich, Federal Republic of Germany, at the price shown in deutschmarks (DM)

Avail Issuing Activity, or Corporate Author, or no indication of availability Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document

Avail U S Patent Office Sold by Commissioner of Patents, U S Patent Office, at the standard price of 50 cents each, postage free

Other availabilities If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line

#### **SUBSCRIPTION AVAILABILITY**

**This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplements, excluding the annual cumulative index, is \$18.75 domestic \$23.50 foreign. All questions relating to the subscriptions should be referred to NTIS.**

## TYPICAL CITATION AND ABSTRACT FROM IAA

# AEROSPACE MEDICINE AND BIOLOGY

*A Continuing Bibliography (Suppl. 148)*

DECEMBER 1975

## IAA ENTRIES

**A75-41913** Ventral midbrain stimulation, blood pressure responses and their relation to the dopaminergic nigro-striatal pathways. A Spring and W Winkelmuller (Hannover, Medizinische Hochschule, Hanover, West Germany) *Pflugers Archiv*, vol 358, no 4, 1975, p 339-348 20 refs

**A75-42052** Reliability of life support systems as related to general space flight safety requirements B A Adamovich and G G Ter-Minasyan (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR) *Journal of the Astronautical Sciences*, vol 22, Oct-Dec 1974, p 85-94 14 refs

An approach for increasing the reliability of the life support system of a spacecraft is discussed. The approach is based on a selection of the system elements with the best reliability potential at the initiation of the system development. In the absence of concrete empirical information regarding the reliability of the considered system components, a comparative reliability evaluation for given alternate possibilities has to be conducted. G.R.

**A75-42192** A numerical study of pulsatile flow through constricted arteries B J Daly (California, University, Los Alamos, N Mex) In *International Conference on Numerical Methods in Fluid Dynamics*, 4th, Boulder, Colo, June 24-28, 1974, *Proceedings* New York, Springer-Verlag New York, Inc, 1975, p 117-124 5 refs

The current paper describes a numerical technique of examining flow phenomena associated with the formation, growth and detachment of plaque material at arterial walls. The study concentrates on two aspects of blood flow in large arteries: a nonisotropic and space-varying elastic model of distensible arteries, and an efficient procedure for calculating pulsatile flow. The calculation procedure makes use of the arbitrary Lagrangian-Eulerian method for the computation of transient, multidimensional, viscous flow. S J M

**A75-42263** # Study of the characteristics of decompressive gas formation with the aid of ultrasound (Issledovanie zakonomernosti dekompressionsnogo gazoobrazovaniia s pomoshch'iu ul'trazvuka) I A Sapov, L K Volkov, V V Men'shikov, and I P lunkin (Voenno-Meditsinskaya Akademiia, Samostoiatel'noe Konstruktorsko-Tekhnologicheskoe Biuro Biofizpribor, Leningrad, USSR) *Akademiia Nauk SSSR, Doklady*, vol 222, May 11, 1975, p 508-511 10 refs In Russian

The paper describes experiments conducted on dogs, in which ultrasonic methods were used to determine the threshold level at which the tissues of a living organism can be saturated by an indifferent gas (N<sub>2</sub>) before the appearance of gas bubbles in the venous blood flow. The dogs were subjected to increased pressures for various lengths of time and then returned to normal pressure in order that decompression effects might be observed. The symptoms of decompression sickness were monitored while the appearance of gas bubbles in the blood flow was detected by Doppler reflected ultrasound. Analysis of data on pressure and exposure, compression

sickness symptoms, and the appearance of bubbles reveals a zone of latent decompression illness where bubbles are present without signs of decompression illness

P T H

**A75-42316** # Sialoproteids of the liver and blood serum in rats exposed to small doses of ionizing radiation (Sialoproteidy pcheleni i syvorotki krovi krys pri deistvii nebol'shikh doz ioniziruiushchego radiatsii) E V Malashevich (Akademiiia Nauk Belorusskoi SSR, Institut Fiziologii, Minsk, Belorussian SSR) *Akademiiia Nauk BSSR, Doklady*, vol 19, July 1975, p 654-656 8 refs In Russian

**A75-42320** The electrical response of the human eye to sinusoidal light stimulation A Troelstra (Rice University, Houston, Tex) and C A Garcia (Texas, University, Houston, Tex) *IEEE Transactions on Biomedical Engineering*, vol BME-22, Sept 1975, p 369-378 19 refs Grant No NIH-5-S05-RR-07103

Experiments have been performed to study the exact nature of ERG response to sinusoidal light stimulation, to reveal the factors affecting the harmonic distortion in these responses, and to determine how this is related to stimulus parameters and clinical abnormalities. Following a period of 15 min of initial dark adaptation, 10 normal human subjects and 40 clinical patients were tested to obtain flash ERG and ERB response to sinusoidal stimulation for a wide range of stimulus frequencies (0.5-24 Hz) and a modulation percentage of nearly 85%. When sinusoidally modulated light is used to stimulate the retina, the resulting ERG potentials are generally not sinusoidal due to nonlinearities in the system. However, the responses are found to be very reproducible and to be easily characterized by a few parameters on the basis of a Fourier analysis. Amplitude and phase characteristics can be understood using a simple model for the scotopic B-wave system and additive interaction by the photopic system. It is suggested that electroretinographic responses in patients with retinal abnormalities may be indicative of the character of these abnormalities. S D

**A75-42321** Analysis of plethysmographic estimation of alveolar pressure F P Primiano, Jr and I Greber (Case-Western-Reserve University, Cleveland, Ohio) *IEEE Transactions on Biomedical Engineering*, vol BME-22, Sept 1975, p 393-399 15 refs Research supported by the Cleveland Cystic Fibrosis Foundation and Health Fund of Greater Cleveland, Grant No NIH-HE-13885

Relationships between the change in a representative alveolar pressure in a pulmonary system which acts as a single mechanical compartment and changes in measurable variables are derived for several plethysmographic systems. Derivations considering air as a one-component gas are presented for the pressure and flow-displacement plethysmographs in which the subject exchanges respiration gas with air in the box, and for a plethysmograph from which the subject breathes gas from outside the box using a tube through the box wall. A set of assumptions and approximations which can be invoked to develop the standard differential plethysmographic equations is explicitly stated. The analysis is extended to include multicomponent gas mixtures and mass exchange between alveolar gas and blood for a generalized plethysmographic configuration. Some practical requirements on experimental conditions arising from the derived relationships and the assumptions and approximations used in the derivations are considered. (Author)

**A75-42322** Analog sample/hold circuit for physiological signal monitoring A T Johnson (Maryland, University, College Park, Md) *IEEE Transactions on Biomedical Engineering*, vol BME-22, Sept 1975, p 420-423 8 refs Army supported research

A sample/hold circuit is proposed for holding calibration signal while adjustments are made with minimum test disruption. The circuit employs analog methods, since infinite resolution, simpler and less expensive circuitry in combination with recent developments in FET operational amplifiers permit much longer hold times than previously possible. The circuit block diagram is described, along with circuit schematic and operation. The performance of the circuit presented is discussed as to fidelity of stored voltage and voltage drift. It is shown that the circuit yields a performance which several years ago would have been unattainable at moderate cost. S D

**A75-42360** The sequence of normal recovery of excitability in the dog heart J A Abildskov (Utah, University, Salt Lake City, Utah) *Circulation*, vol 52, Sept 1975, p 442-446 18 refs. Research supported by the Richard A and Nora Eccles Harrison Fund for Electrocardiographic Research, Grants No NIH-HL-13480, No NIH-NHLI-72-2988

The sequence with which 18 to 70 ventricular sites recovered excitability after normal excitation was determined in 15 dogs. At the epicardial level the recovery sequence was similar to that of normal activation. The sequence of excitation and recovery differed at the endocardium with some basal areas recovering excitability earlier than the apex despite later activation. Evidence of a normal epicardial to endocardial recovery sequence was also obtained. The findings are compatible with and provide a tentative explanation of some features of T waves in human body surface electrocardiograms. (Author)

**A75-42475** Geochemistry and the origin of life Edited by K A Kvenvolden (NASA, Ames Research Center, Moffett Field, Calif) Stroudsburg, Pa, Dowden, Hutchinson and Ross, Inc (Benchmark Papers in Geology Volume 14), 1974 436 p \$26

The origin of life on earth is examined from a viewpoint stressing the validity of the concept of chemical evolution. The different geological formations supporting the mechanisms of the theory are described, the stage of chemical evolution (preceding that of biological evolution) would have taken place from the time of the origin of the earth and meteorites, 4.6 billion years ago, to the early Precambrian period, about 3.2 billion years ago. Specific aspects of the problem discussed include amino acids from spark discharges and their comparison with the Murchison meteorite amino acids, the properties and theory of genesis of the carbonaceous complex within the cold Bokeveld meteorite, ammonium ion concentration in the primitive ocean, the oxygen isotope chemistry of ancient charts, the origin and rise of oxygen concentration in the earth's atmosphere, Precambrian microorganisms and evolutionary events prior to the origin of vascular plants, and biogenicity and significance of the oldest known stromatolites. S J M

**A75-42578** High-speed holography of vibrating objects and rapid events T Uyemura and Y Yamamoto (Tokyo, University, Tokyo, Japan) In High speed photography, Proceedings of the Eleventh International Congress, London, England, September 15-21, 1974 London, Chapman and Hall, Ltd, 1975, p 271-276

Vibrations of ultra-sonic bonders and eardrums of frog, guinea-pig and human were studied by means of the time averaged holographic interferometry. A new technique of mechanical chopping systems for stroboscopic holographic interferometry has been developed. The fringes generated by real-time holographic interferometry were photographed by a high-speed cinecamera Ruby laser Q-switched by a few methods was improved to take high quality holograms. (Author)

**A75-42580** Microholography - Interferometric investigation of deformations of the eardrum of guinea pigs undergoing transient sound effects (Microholographie - Etude interférométrique des déformations du tympan du cobaye sous l'effet de bruits impulsionsnels) P Smigelski, F Albe, H Fagot, A Dancer, and R

Franke (Institut Franco-Allemand de Recherches, Saint-Louis, Haut-Rhin, France) In High speed photography, Proceedings of the Eleventh International Congress, London, England, September 15-21, 1974 London, Chapman and Hall, Ltd, 1975, p 289-294 In French Research supported by the Direction des Recherches et Moyens d'Essais

**A75-42644** # The effect of decompression on the alimentary canal (Wpływ dekomprezji na przewód pokarmowy) B Bembrowski and E Sokolowski (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland) *Postepy Astronautyki*, vol 8, no 1, 1975, p 27-35 11 refs In Polish

The results of X-ray examinations of the gastrointestinal tract in men under hypobaric conditions are discussed. X-ray photographs reveal buildup of gases in the stomach pit during high-altitude flight. The functional and anatomical status of the tract under low-pressure conditions is discussed. P T H

**A75-42645** # Acceleration tolerance level dependence on age and some morphotic features M Wojtkowiak (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland) *Postepy Astronautyki*, vol 8, no 1, 1975, p 49-60 8 refs In Polish

Five hundred men in the age range of 20-45 years were tested on a centrifuge. A linear acceleration increase program at the rate of 0.1 g/s was accepted. An organism tolerance limit was set at the acceleration value corresponding to total loss of vision. The age, height, and body weight of each person was recorded and indices of constitution according to Rohrer were calculated. The results were compared with the acceleration tolerance level. A dependence of acceleration tolerance level upon age and constitution was discovered. It was proved that the highest accelerations were tolerated by men of strong and proportional constitution, of short stature and middle body weight. The lowest tolerances were found in tall men with a low body weight. A small weight excess in relation to height seems to favor acceleration tolerance. (Author)

**A75-42682** Stereoillusion based on visual persistence M Morgan (Cambridge University, Cambridge, England) *Nature*, vol 256, Aug 21, 1975, p 639, 640 6 refs

The question is considered of what is perceived when a stroboscopically moving target is viewed with a filter over one eye. The experimental investigation was based on use of a haploscopic display in which the number of bars presented separately to the two eyes was controlled on an oscilloscope display by a digital computer. The appearance of the fused display is described together with the display appearance to an observer with one eye covered. It is shown that the fused display gave the impression of a picket fence in motion together with the impression of depth to the motion, while clear depth was seen in the latter case only when the Pulfrich and persistence effects reinforced each other. It is noted that the reported effect cannot be explained by existing knowledge of static stereopsis or by the conventional explanation of the Pulfrich effect itself. Some possible explanations are briefly discussed. F G M

**A75-42683** Spontaneous voltage fluctuations in retinal cones and bipolar cells E J Simon, T D Lamb, and A L Hodgkin (Cambridge University, Cambridge, England) *Nature*, vol 256, Aug 21, 1975, p 661, 662 12 refs

Based on the hypothesis that vertebrate rods and cones continuously release transmitter in the dark and that light suppresses this release, it is shown that the bipolar cells which receive information from the cones are electrically noisy in the dark because of random fluctuations in the release of cone transmitter. It is also shown that these bipolar cells are relatively quiet in light, when transmitter release is suppressed. An intracellular recording from a hyperpolarizing bipolar cell in the isolated eyecup of a turtle is presented to illustrate these effects. The possible order of magnitude of the events underlying the dark noise of a bipolar cell is estimated to be 0.24 mV. It is found that a steady light suppresses noise in

cones as well as in bipolar cells. A possible source of dark noise in cones is shown to be random closure of the light-sensitive ionic channels

F G M

**A75-42707 \* # Noise in space** W P Rader, J Baratono (Martin Marietta Aerospace, Denver, Colo.), H Bandgren, and R Erwin (NASA, Marshall Space Flight Center, Huntsville, Ala.) *Acoustical Society of America, Meeting, 89th, Austin, Tex., Apr 7-11, 1975, Paper 32 p*

The Skylab program presented an excellent opportunity to investigate the effects of noise on man confined in limited space for long periods of time. This paper summarizes the results of a 4 year study to achieve a habitable noise environment for the Skylab astronauts. Noise control measures are described and noise measurements obtained during the Skylab missions are presented, as well as the astronauts' reactions to and evaluations of the noise environment

(Author)

**A75-42752 Autonomic nervous system and adaptation to cold in man** J LeBlanc, S Dulac, J Côte, and B Girard (Université Laval, Quebec, Canada) *Journal of Applied Physiology*, vol 39, Aug 1975, p 181 186 8 refs Defence Research Board of Canada Grant No 4310 140

The responses to a cold hand test (blood pressure increase and tachycardia) and to a cold face test (blood pressure increase and bradycardia) were used to study the role of the autonomic nervous system in cold adaptation in humans. Results indicate that repeated exposures to severe cold in men activate some adaptive mechanisms characterized by a diminution of the sympathetic response and a concomitant enhancement of the vagal activation normally observed when the extremities and the face are exposed to cold

(Author)

**A75-42753 Sleep patterns after graded exercise** C M Shapiro, R D Griesel, P R Bartel, and P L Jooste (Witwatersrand, University, South African Council for Scientific and Industrial Research, National Institute for Personnel Research, Chamber of Mines of South Africa, Human Sciences Laboratory, Johannesburg, Republic of South Africa) *Journal of Applied Physiology*, vol 39, Aug 1975, p 187-190 23 refs

The effects of six graded and measured exercise activities on sleep patterns were investigated in two healthy young men. Electrophysiological recordings were made continuously throughout the night to distinguish sleep states. This experiment was designed to test the hypothesis of a relation between physical activity and slow-wave sleep (SWS stages 3 and 4 of non-REM sleep). A progressive increase in SWS over the whole-night sleep record was found with progressively increasing physical fatigue. A fall in rapid-eye movement (REM) sleep and at higher exercise levels, of stage 2 sleep, was found. The results support the hypothesis that SWS is involved in the recovery process from fatigue

(Author)

**A75-42754 Simulation of regional lung emptying during slow and forced expirations** J Pardaens, K P van de Woestijne, and J Clement (Akademisch Zeikenhuis St Rafael, Louvain, Belgium) *Journal of Applied Physiology*, vol 39, Aug 1975, p 191 198 33 refs Research supported by the Fonds voor Geneeskundig Wetenschappelijk Onderzoek

Regional lung emptying was simulated by means of a bialveolar lung model. The influence of bronchial asymmetry and the vertical pleural pressure gradient was evaluated. The model suggests that (1) *in vivo* the influence of the pleural pressure gradient prevails over that of the bronchial asymmetry, (2) in the presence of this gradient, the shape of phases III and IV of the single breath washout curves obtained following inspiration of a tracer gas bolus at residual volume is determined by the recoil pressure-volume curve of the lung, by the vertical displacements of the alveoli, and, at higher flow rates, by the elastic characteristics of the airways, (3) if the pleural pressure gradient is independent of lung volume and of flow rate, the factors mentioned in 2 suffice to produce single-breath washout

curves (phases III and IV) and regional vs overall lung volume relationships corresponding to those observed *in vivo*

(Author)

**A75-42755 Experimental cardiac necrosis in hypobaric and anemic hypoxia** J J McGrath, B Ostadal, J Prochazka, M Wachtlova, and V Rychterova (Illinois, University, Peoria, Ill., Ceskoslovenska Akademie Ved, Fysiologický Ustav, Karlova Univerzita, Prague, Czechoslovakia) *Journal of Applied Physiology*, vol 39, Aug 1975, p 205-208 25 refs

Resistance to isoproterenol induced cardiac necrosis (IPRO) was compared in rats exposed to two types of hypoxia (i.e., hypobaric and anemic). IPRO was induced by two consecutive, subcutaneous injections of isoproterenol (80 mg/kg) at 24-hr intervals. The animals were killed on the third day and the severity of the lesion was evaluated on a 0 (no damage) to 4 (severely damaged) scale. Hypobaric hypoxia affords some protection against IPRO which is not afforded by anemic hypoxia. Similarities and differences in the two hypoxias are discussed

(Author)

**A75-42756 Adaptation of brain monoamine synthesis to hypoxia in the rat** J N Davis (U.S. Veterans Administration Hospital, Duke University, Durham, N.C.) *Journal of Applied Physiology*, vol 39, Aug 1975, p 215-220 38 refs Grants No NIH-HLO-7896, No NIH-NS-06233

Oxygen is a substrate in the synthesis of the neurotransmitters, norepinephrine, dopamine, and serotonin. Changes in environmental oxygen appear to cause corresponding alterations in brain monoamine synthesis *in vivo*. The effect of chronic hypoxia was studied by exposing rats to 10% oxygen for up to 36 hr. Brain monoamine synthesis, estimated *in vivo*, decreased initially and then returned to control levels, despite continued exposure to 10% oxygen. During this apparent adaptation to hypoxia, there were no changes in the concentration of brain serotonin, norepinephrine, dopamine, or tryptophan, while brain tyrosine increased after 24 hr of exposure. The adaptation of brain monoamine synthesis to hypoxia appeared to correlate with adaptive changes in brain tissue oxygen rather than any change in the intraneuronal regulation of amine synthesis

(Author)

**A75-42757 Prediction of body composition in habitually active middle-aged men** S Lewis, W L Haskell, H Klein, J Halpern, and P D Wood (Stanford University, Stanford, Calif.) *Journal of Applied Physiology*, vol 39, Aug 1975, p 221-225 32 refs

In 45 physically active men (ages 35-67 yr) who underwent hydrostatic weighing to determine body composition, multiple regression equations were developed for the prediction of body density, lean body weight (LBW), fat body weight, and % fat using selected anthropometric measurements. The prediction accuracy for these parameters using several previously generated anthropometric regression equations was also determined. Analysis of previous data indicated that in selected populations total body weight can account for a relatively large fraction of the variance in LBW. LBW may be estimated quite accurately in physically active men with one of several regression equations which include total body weight as an independent variable

**A75-42758 Circadian variations in the sweating mechanism** J Timbal, J Colin, and C Boutelier (Centre d'Essais en Vol, Brétigny-sur-Orge, Essonne, France) *Journal of Applied Physiology*, vol 39, Aug 1975, p 226-230 24 refs Research supported by the Direction des Recherches et Moyens d'Essais

Sweat rates and body temperatures of human subjects were measured at 0200, 1000, and 1800 hr during a heat exposure of 90 min. The latent period of sweating was not significantly altered in the evening but significantly shortened during the night. Mean body temperature corresponding to the onset of sweating was nearer to the basal body temperature during the night, while during the day the difference between these two temperatures became larger. This phenomenon seems related to the circadian cycle of vasomotor adjustment, since during the night body conductance was higher than

during the day and corresponded to a state of vasodilatation similar to that observed at the onset of sweating During the day, this situation was reversed

**A75-42759** Turnover of free fatty acids during recovery from exercise L Hagenfeldt (Karolinska Hospital, Stockholm, Sweden) and J Wahren (Serafimer Hospital, Stockholm, Sweden) *Journal of Applied Physiology*, vol 39, Aug 1975, p 247-250 23 refs Swedish Medical Research Council Grant No 19X-722

The turnover of plasma free fatty acid (FFA) was studied during the recovery from exercise with the aid of a continuous infusion of C-14 labeled oleic acid It is concluded that the postexercise peak in arterial FFA is a consequence of augmented release of FFA into the plasma pool above the level during exercise, possibly related to the release of sympathetic vasoconstrictor tone As a consequence, the rate of removal of FFA rises at the end of exercise and remains augmented above the basal level for as long as the arterial concentration is increased

**A75-42760** Effects of equivalent sea-level and altitude training on maximal oxygen uptake and running performance W C Adams, E M Bernauer, D B Dill, and J B Bomar, Jr (California, University, Davis, Calif, US Air Force Academy, Colorado Springs, Colo) *Journal of Applied Physiology*, vol 39, Aug 1975, p 262-266 20 refs NSF Grant No 35281, Contract No F44620-72-C-0011, Grants No AF AFOSR-PO-72-0001, No PHS-HD-05625

Twelve middle-distance runners, each having recently completed a competitive track season, were divided into two groups matched for maximal oxygen uptake, 2-mile run time, and age Group 1 trained for 3 wk at Davis, Pb = 760 mm Hg, running 19.3 km/day at 75% of sea level (SL) maximal oxygen uptake, while group 2 trained an equivalent distance at the same relative intensity at the US Air Force Academy (AFA), Pb = 586 mm Hg The groups then exchanged sites and followed a training program of similar intensity to the group preceding it for an additional 3 wk It is concluded that there is no potentiating effect of hard endurance training at 2,300-m over equivalently severe SL training on SL maximal oxygen uptake or 2-mile performance time in already well conditioned middle-distance runners

**A75-42762** Shunt dynamics in experimental atrial septal defects J A Alexander, J C Rembert, W C Sealy, and J C Greenfield, Jr (Duke University, US Veterans Administration Hospital, Durham, NC) *Journal of Applied Physiology*, vol 39, Aug 1975, p 281-286 14 refs Grants No PHS-HL-09711, No PHS-HL-01782

In order to study the hemodynamic variables involving the magnitude, direction, and timing of phasic shunt flow, both the interatrial pressure gradient and blood flow along with other pertinent hemodynamic variables were measured instantaneously across a surgically created atrial septal defect (ASD) in seven awake dogs Atrial and ventricular pacing and infusion of phenylephrine and isoproterenol were used to alter hemodynamic conditions The wave form of phasic ASD flow was similar both in configuration and

timing to the interatrial pressure gradient During the cardiac cycle, both left-to-right (L-R) and right-to-left (R-L) shunting occurred atrial contraction augmented L-R flow, the onset of ventricular contraction was associated with R-L flow, during the latter part of ventricular contraction, flow returned to L-R with the maximum L-R shunting occurring in early diastole Tachycardia, infusion of phenylephrine and isoproterenol did not alter the phasic flow pattern

**A75-42764** Circadian variations in concentrations of plasma thyroxine and triiodothyronine in man A Balsam, C R Dobbs, and L E Lepo (USAF, School of Aerospace Medicine, Brooks AFB, Tex) *Journal of Applied Physiology*, vol 39, Aug 1975, p 297-299 16 refs

The purpose of the present study is to evaluate whether periodic changes in the levels of thyroxine (T<sub>4</sub>) and triiodothyronine (T<sub>3</sub>) could be detected by assay techniques considered specific for these iodothyronines, to determine the interrelationships between circadian variations in plasma levels of T<sub>4</sub> and T<sub>3</sub>, and to estimate the correlation between fluctuations in plasma levels of iodothyronines and plasma total protein concentration The study confirms the existence of a circadian rhythm of plasma T<sub>4</sub> and demonstrates the presence of a parallel rhythm of plasma T<sub>3</sub> It is suggested that fluctuations in hormonal binding by plasma proteins may be responsible for the observed variation in plasma total hormone measurements

**A75-42766** Computerized method for analyzing maximum and partial expiratory flow-volume curves R J Soto, H V Forster, and B Rasmussen (Wisconsin, Medical College, Milwaukee, Wis) *Journal of Applied Physiology*, vol 39, Aug 1975, p 315-317 8 refs

Computerized instrumentation and software have been developed to obtain maximum expiratory flow-volume (MEFV) and

partial expiratory flow-volume (PEFV) curves. The computerized system calculates and prints out the flow at 25% and 40% of control vital capacity (VC), the expiratory volume, peak expiratory flow rate, and expiratory volume at one second (FEV1) divided by VC, the latter expressed as a percent. The flow-volume curves can be displayed on an oscilloscope or plotter and stored on magnetic tape. A pilot study was completed to demonstrate the reliability and validity of the data obtained. **A75-42767 \*** A multichannel implantable telemetry system for flow, pressure, and ECG measurements T B Fryer, H Sandler, W Freund, E P McCutcheon, and E L Carlson (NASA, Ames Research Center, Moffett Field, Calif) *Journal of Applied Physiology*, vol 39, Aug 1975, p 318-326 22 refs.

The design, principles of operation, and performance of an implantable miniaturized (48 cu cm in volume) multiplex telemetry system for simultaneous measurement of up to eight physiological parameters (including cardiovascular data) are described. Integrated circuits are used to reduce the size, complexity, and cost of fabrication. Power consumption is reduced using recently developed complementary MOS devices. PWM technique is selected as it is relatively easy to implement, lends itself to ICs, and provides an accurate means of transmitting data. The system is totally implantable within the chest of a test animal, with no wire penetrating through the skin. It is shown that the described system permits repeated measurement of the physiological effects of a variety of interventions in awake unanesthetized animals. S D

**A75-42768** A high accuracy linear rate meter G R Wyss (Washington, University, Seattle, Wash) *Journal of Applied Physiology*, vol 39, Aug 1975, p 327-330 Grant No NIH-GM 00260

By implementing analog computer techniques using digital circuits, an instantaneous rate meter was built with approximately 100 times the accuracy of commercially available rate meters. The circuit is accurate to within plus or minus 0.2 events/min over a range of rates of 0.2-900 epm. Modifications can be made to provide a digital display of rate. The circuit design techniques used in developing the rate meter may be used to generate a wide variety of functions of time with very high accuracy. (Author)

**A75-42769** Multichannel subcarrier ECG, respiration, and temperature biotelemetry system E N Smith and T J Salb, Jr (Texas Tech University, Lubbock, Tex) *Journal of Applied Physiology*, vol 39, Aug 1975, p 331-334 12 refs. Research supported by the Texas Tech University

A three channel biotelemetry system measuring ECG, respiration, and body temperature is described. The transmitter employs a 6-kHz subcarrier oscillator and is small enough for surgical implantation in animals the size of rats or larger. The frequency modulated 6 kHz tone from the receiver can be demodulated directly or recorded on an inexpensive cassette tape recorder for future analysis. The transmitter cost is approximately \$35.00 and measures 3 x 1 cm. A battery life of several weeks and transmitter range of 10-100 m is typical. Transmission is on the FM broadcast band (88-108 MHz) and reception from an inexpensive FM portable receiver is possible. (Author)

**A75-42775 \*** Diagnostic accuracy of an ultrasonic multiple transducer cardiac imaging system R L Popp, O R Brown, and D C Harrison (Stanford University, Stanford, Calif) *American Heart Journal*, vol 90, Sept 1975, p 329-334 Grant No NGR-05-020-305

An ultrasonic multiple-transducer imaging system for intracardiac structure visualization is developed in order to simplify visualization of the human heart *in vivo* without radiation hazard or invasion of the body. Results of the evaluation of the diagnostic accuracy of the devised system in a clinical setting for adult patients are presented and discussed. Criteria are presented for recognition of mitral valve prolapse, mitral stenosis, pericardial effusion, atrial septal defect, and left ventricular dyssynergy. The probable cause for false-positive and false-negative diagnoses is discussed. However,

hypertrophic myopathy and congestive myopathy were unable to be detected. Since only qualitative criteria were used, it was not possible to differentiate patients with left ventricular volume overload from patients without cardiac pathology. S D

**A75-42793 #** Visual masking and saccadic suppression N A Iakimov, L I Mitrani, and S M Mateev (Bulgarska Akademija na Naukite, Institut po Fiziologija, Sofia, Bulgaria) *Bulgarska Akademija Nauk, Doklady*, vol 28, no 6, 1975, p 833-835 7 refs

Structured backgrounds were presented to subjects with normal vision during the course of saccadic eye movements, and the thresholds for detecting a visual test stimulus when the structured background disappeared just before or after the onset of saccade were compared. The backgrounds consisted of a uniformly illuminated field crossed by a dark horizontal stripe or a grating of vertical black and white bars crossed by a dark horizontal stripe. The test stimulus was a bright circle. The results showed a significant enhancement of saccadic suppression when the background structure disappeared after the onset of saccade, as opposed to the case when it disappeared before saccade onset. It is concluded that saccadic suppression is a kind of visual masking which occurs at the initial displacement of contours over the retina at the very beginning of saccade even when moving edges do not cross the locus of the stimulus retinal image. **A75-42799 \*** Quantitative relationship between airborne viable and total particles G S Oxborrow, N D Fields, J R Puleo, and C M Herring (U S Public Health Service, Center for Disease Control, Cape Canaveral, Fla) *Health Laboratory Science*, vol 12, Jan 1975, p 47-51 13 refs Contract No NAS7-100

The numbers of viable and total particles in a microbiological laboratory and in a class 100,000 clean room were examined for a predictable relationship to aid the monitoring of airborne microbial contamination. Over 99% of the total particles present in both areas were less than 1 micron in size, however, only 1 in 10,000 of the particles this size were viable. At the other end of the particle size scale, it was found that less than 0.1% of the total particles were greater than 5.4 microns in size, but only 4.5% of these particles were viable. Viable particles make up only a very small portion of the total particles making any correlation undetectable. An analysis of the combined data from both areas using only total and viable particles over 5.4 microns showed a positive correlation. An analysis of the data from each area individually showed no correlation. (Author)

**A75-42801 #** Specific and general mechanisms of brain support of psychic activity in man and prospects of this problem (Chastnye i obshchie mekhanizmy mozgovogo obespechenija psichicheskoi deiatel'nosti cheloveka i perspektivnye problemy) N P Bekhtereva (Akademija Meditsinskikh Nauk SSSR, Leningrad, USSR) *Fiziologija Cheloveka*, vol 1, Jan-Feb 1975, p 6-17 74 refs. In Russian

Results of investigations on the neurophysiological mechanisms underlying the psychic activity in man are reviewed and discussed. Particular attention is given to the analysis of normal and pathological emotional responses and to the brain coding mechanism of verbal signals. A number of theses are set forth regarding the problems of structural-functional support of psychic activity, the role of the long-term memory matrix in the stable fixation of a pathologic condition, the theory of emotions, and verbal memory. Experiments are performed to study some aspects of neurophysiological coding of higher psychic functions. Particular attention is given to the processes underlying the formation, reorganization, and interaction of the code forms of verbal signals as a function of the degree of the potential activity of the engrams for long-term verbal memory and the processes involved in their activation in performing associative logic operations. Experimental findings suggest that engrams of long-term verbal memory have active information and control functions and that the patterns of the controlling neural code which ensure the formation and supervision of verbal responses are derived code forms related to the various realizations of the associative logic operations.

**A75-42805 # Cooperative mechanisms for the sensitivity of brain tissue to external and internal electric fields (Kooperativnye mekhanizmy vospriimchivosti mozgovoi tkani k vneshimu i vnutrennemu elektricheskemu poliam)** W R Adey (California, University, Los Angeles, Calif.) *Fiziologiya Cheloveka*, vol 1, Jan-Feb 1975, p 59-68 38 refs In Russian (Translation)

The effect of weak electric and electromagnetic fields on the behavioral responses in man and animal is investigated. The data collected are compared with changes in neurophysiological activity and with biochemical transformations occurring at the membrane level. Major conclusions are that (1) there is an interaction between brain tissue components and electrical and electromagnetic fields, (2) calcium ions play an important part in the realization of cooperative processes on the membrane surface, and (3) internal electrical gradients, including EEG, may have a significant effect on neurochemical transformations at the membrane level. Possible paths of information processing by brain tissues are identified.

V B Grechin (Akademii Meditsinskikh Nauk SSSR, Leningrad, USSR) *Fiziologiya Cheloveka*, vol 1, Jan-Feb 1975, p 90-97 10 refs In Russian

Experiments are performed to study the variation characteristics of nonelectric slow processes in the deep structures of the human brain during long-term retention with allowance for reproduction quality. A given activity of the operative memory type with a retention duration up to 10 min is shown to cause distinct changes in the nonelectric slow processes involved. A short-term reproducible change in the pO<sub>2</sub> level is revealed in the region of subcortical nuclei. A long retention in operative memory tests is shown to cause changes in the spectral composition of the spontaneous fluctuations of pO<sub>2</sub> and in local blood flow, an increase in blood flow level and a decrease in impedance in the region of deep structures. The dynamic trend of these processes is discussed.

**A75-42811 # Mechanism of the adaptation of the auditory apparatus to an acoustic load (O mekhanizme adaptatsii sluchkovogo pribora k zvukovoi nagruzke)** L Ia Balonov, V L Deglin, and D A Kaufman (Akademii Nauk SSSR, Institut Evoliutsionnoi Fiziologii i Biokhimii, Leningrad, USSR) *Fiziologiya Cheloveka*, vol 1, Jan-Feb 1975, p 152-159 33 refs In Russian

Experiments are performed to study the characteristics of poststimulatory auditory adaptation (PSAA) after administration of neuropharmaceuticals selectively affecting the activity of nonspecific brain systems and after bilateral and unilateral electroconvulsive seizures. Experimental findings confirm that adaptability of the auditory system is regulated by the reticular structures of the brain stem and posterior hypothalamus, and that the reticular influences regulating PSAA are brought into play at a level not exceeding the second neuron of the auditory path and appear to be distinct for the right and left sides of the auditory system. The magnitude of PSAA may serve as a quantitative measure of the nonspecific activation of each of the cerebellar hemispheres. S D

**A75-42812 # Correlation between evoked potentials and processes of sensory analysis in man (Korrelatsiya vyzvannyykh potentsialov s protsessami sensornogo analiza v cheloveka)** L M Puchinskaya (Akademia Nauk SSSR, Institut Vysshei Nervnoi Deiatel'nosti i Neurofiziologii, Moscow, USSR) *Fiziologiya Cheloveka*, vol 1, Jan-Feb 1975, p 160-166 13 refs In Russian

Experiments are performed to study the effect of light flashes with two different intensities on the evoked potentials (EPs) in the occipital and central regions in the brain of healthy adults. Resulting EPs are compared with the subjective perception of any difference between the applied stimuli. Two processes are investigated: elementary perception and a more complex perception associated with discrimination of certain stimuli from a variety of stimuli in connection with their significance. It is found that, as in psychology, these two processes exhibit distinct differences according to the electrographic response of the visual cortex. Experimental findings suggest that both perception and recognition of stimuli are reflected in the behavior of EPs in the visual cortical zones, apparently the secondary and tertiary ones. S D

**A75-42813 # Relationship among the kinematic characteristics of human walking (O sviazi kinematicheskikh kharakteristik khod'by cheloveka)** A L Karpovich (Akademia Nauk SSSR, Institut Problem Upravleniya, Moscow, USSR) and V V Smolianinov (Akademia Nauk SSSR, Institut Problem Peredachi Informatsii, Moscow, USSR) *Fiziologiya Cheloveka*, vol 1, Jan-Feb 1975, p 167-175 7 refs In Russian

Experimental relationships are obtained among the kinematic characteristics of human walking for a wide range of paces under the following locomotor regimes: standard forward and backward walking, walking with constant duration of a locomotor cycle, and walking with constant stride length. The results point to the possibility of a common representation of the various walking regimes on the basis of a certain hierarchy in the kinematic invariant correlations. S D

**A75-42814 # Quantitative regulation and information estimates for the systemic activity of the brain (Kolichestvennye regulatsionnye i informatsionnye otsenki sistemnoi deiatel'nosti golovnogo mozga)** B M Shishkin (Akademia Meditsinskikh Nauk SSSR, Leningrad, USSR) *Fiziologiya Cheloveka*, vol 1, Jan-Feb 1975, p 176-182 13 refs In Russian

Methods of the theory of automatic control are used to obtain quantitative criteria for estimating the systemic activity of the human brain. It is shown that the derived parameters for the regulatory, entropic, and structural stability of the discussed biological system adequately reflect the dynamics and quality of the self-regulatory processes involved in the central nervous system. S D

**A75-42815 # A structural method for investigation of slow fluctuations in the human brain (Strukturnyi metod issledovaniia medlennykh kolebanii v golovnom mozge cheloveka)** Iu D Kropotov (Akademia Meditsinskikh Nauk SSSR, Leningrad, USSR) *Fiziologiya Cheloveka*, vol 1, Jan-Feb 1975, p 183-187 15 refs In Russian

A structural technique is proposed for the analysis of the slow fluctuations of oxygen tension and electrical potential in the

neuronal-glial cell populations of the human brain. The proposed technique provides a representation of slow processes in the form of a discrete sequence of points characterized by structural parameters. The parameters selected are the duration and amplitude of ascending and descending phases as well as the period and asymmetry coefficient of the fluctuations. A possible physiological interpretation of the involved structural parameters is given. S D

**A75-42827 \*** *Autosomal recombination in males of Drosophila melanogaster caused by a transmissible factor* F R Waddle (Fayetteville State College, Fayetteville, NC) and I I Oster (Bowling Green State University, Bowling Green, Ohio) *Journal of Genetics*, vol 61, June 1974, p 177-183 Research supported by the Bowling Green State University, NSF Grant No GB-29140, Grant No NGR-36-017-014

**A75-42828 \*** *Differential permeation of artemia cysts and cucumber seeds by alcohols* C W Smith and S M Siegel (Hawaii, University, Honolulu, Hawaii) *Journal of Histochemistry and Cytochemistry*, vol 23, no 1, 1975, p 80-83 10 refs Research supported by the University of Hawaii, Grant No NGL-12 001-042

The rate of penetration of the simpler alcohols into brine shrimp cysts and cucumber seeds was studied. In solutions below 70% the rate of penetration is related to lipid solvent capacity of the alcohol. In concentrations above 70%, particularly in absolute alcohols, methanol penetrates brine shrimp rapidly and ethanol penetrates slowly. All the other alcohols tested did not penetrate the dormant structures. Ethionine and deuterioxy-methanol did not affect the rate of penetration of methanol. It is suggested that in dehydrated membranes the lipid moiety is protected by a continuous sheet of protein. Methanol, which is fairly similar to water, is probably able to penetrate the membrane by initiating a conformation change in the protein, exposing the lipid which subsequently dissolves in the methanol thus destroying the membrane. (Author)

**A75-42830 \*** *Metabolic studies of transient tyrosinemia in premature infants* S A Fernbach, R E Summons, W E Pereira, and A M Duffield (Stanford University, Stanford, Calif) *Pediatric Research*, vol 9, 1975, p 172-176 32 refs Grant No NGR 05 020-632

The recently developed technique of gas chromatography-mass spectrometry supported by computer has considerably improved the analysis of physiologic fluids. This study attempted to demonstrate the value of this system in the investigation of metabolite patterns in urine in two metabolic problems of prematurity: transient tyrosinemia and late metabolic acidosis. Serial 24-hr urine specimens were analyzed in 9 infants. Transient tyrosinemia, characterized by 5-10-fold increases over basal excretion of tyrosine, p-hydroxyphenyllactate, and p-hydroxyphenylpyruvate in urine, was noted in five of the infants. Late metabolic acidosis was seen in four infants, but bore no relation to transient tyrosinemia. (Author)

**A75-42856 # A program-controlled device for operative man/minicomputer interaction (Programmno-upravliaemoe ustroistvo operativnoi dvustoronnei sviazi cheloveka s minielektronno-vychislitel'noi mashinoi)** V M Griznov and I Tomik (Ob'edinennyi Institut Iadernykh Issledovanii, Dubna, USSR) *Pribory i Tekhnika Eksperimenta*, May-June 1975, p 77-79 7 refs In Russian

A technique is proposed for realizing a program-controlled device which is a component part of an automated system for the accumulation and processing of spectrometric data and is used for the visual display of the experimental blocks in a form which is familiar to the investigator for an effective control of the course of the relevant experiment and subsequent processing of the experimental data. The device is designed to be used in conjunction with the minicomputer TRA-1 (PDP 8E), thereby providing operative man/minicomputer interaction. The factors justifying the use of the program channel are discussed. The commands of the device are examined, stressing the possibility of the programmed combination

of these commands into larger ones Examples of programming the device are provided

**A75-42902** The application of human operator describing functions to studies on the effects of alcohol and marijuana on human performance L D Reid and M F K Ibrahim (Toronto, University, Toronto, Canada) *IEEE Transactions on Systems, Man, and Cybernetics*, vol SMC-5, Sept 1975, p 506-519 12 refs Research supported by the Commission of Inquiry Into the Non-Medical Use of Drugs and Alcoholism and Drug Addiction Research Foundation

**A75-42903** ROBNAV - A range-based robot navigation and obstacle avoidance algorithm D F Cahn and S R Phillips (California, University, Berkeley, Calif) *IEEE Transactions on Systems, Man, and Cybernetics*, vol SMC-5, Sept 1975, p 544-551 22 refs Grant No PHS-EY-00276

An algorithm has been developed that efficiently solves a large class of robot navigation and obstacle avoidance problems using range information as its sole input from the environment. The system resides in a minicomputer and requires very small memory (1500 words) and computing time (1.35 s) allocations while solving simulated problems of broadly ranging spatial complexity and operational intricacy. It is thus a prime candidate for use in mobile robots or manipulators where real-time operation is desired. (Author)

**A75-42997** # On differences in sensitivity of the thermoreceptors of the skin to radiative and convective thermal action (O razlichiiakh chuvstvitel'nosti termoreseptorov kozhi k luchistomu i konvektivnomu teplovomu vozdeistviyu) K P Ivanov (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR) and L M Melesova (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR) *Akademiiia Nauk SSSR, Doklady*, vol 222, June 21, 1975, p 1480-1483 6 refs In Russian

Qualitative analysis of the comparative sensitivity of the skin thermoreceptors to radiative and convective thermal effects was carried out by analyzing the biopotentials from skin nerves in rabbits. It was found that both cold and heat thermoreceptors give sufficiently distinct reactions only to convective thermal stimuli. Radiative heating in the same temperature limits as convective heating evoked a barely perceptible response. The insufficiently developed thermo-regulatory reactions to radiative action is attributed to the low sensitivity of the skin thermoreceptors to infrared radiation

**A75-43004** Physiological effects of long time sitting F Formeller (U S Naval Material Command, Naval Air Development Center, Warminster, Pa) *SAFE Journal*, vol 5, Fall Quarter, 1975, p 16-19 5 refs

Following a summary of previous research concerning seat design influence on blood flow and related effects during long-term sitting, results of a new experiment in this field are reported. The present study was conducted to establish techniques for measuring the physiological effects of sitting, as well as to determine the improvements associated with the Koch seat cushion stimulator assembly. Dependent variables monitored during the 6-hour tests were skin blood flow, blood volume changes, human alertness, discomfort index, and nerve transmission time. The test program showed that quantitative measurements can be made of blood flow changes by impedance plethysmography in the legs of seated subjects. Pulsation of the Koch assembly increased knee area temperature 0.5 to 3.0 F and relieved subjective discomfort

**A75-43249** # Computer simulation of robot-manipulator control (Modelirovaniye na EVM upravleniya robotom-manipulatorom). D E Okhotsimskii, V A Sarychev, E Iu Zueva, S A Mirer, Iu A Sadov, A Iu Shneider, and N I Iakovlev Moscow,

Institut Prikladnoi Matematiki AN SSSR, 1974 42 p 15 refs In Russian

This preprint describes a complex computer simulation of a robot-manipulator which, in accordance with a task given in the form of a sketch, finds necessary parts on an assembly table and stacks them. Discussion centers on simulation of the external environment, analysis of the sketch, and the necessary levels of manipulator control. The simulated environment consists of multifaceted bodies and is perceived by the robot as a linear perspective image. The three-dimensional shape of each part and the relative arrangement of the parts are reproduced from a three-projection sketch of the assembled design. For achieving this task, a manipulator with seven degrees of freedom is simulated on a kinematic level. Several algorithms for manipulator control are presented

**A75-43275** Myocardial calcium in experimental myocardial infarction A A Yunice, D J Baxter, S Kraikitpanitch, and R D Lindeman (U S Veterans Administration Hospital, Oklahoma, University, Oklahoma City, Okla) *Cardiology*, vol 59, no 6, 1974, p 367-375 16 refs Research supported by the U S Veterans Administration, Grant No NIH-HE-12882

Significant increases in myocardial calcium and sodium concentrations and decreases in magnesium and potassium concentrations were observed in infarcted myocardium 5 days after injury when compared against normal myocardium from the same animals. Intermediate changes were observed in periinfarct tissues. Even apparently normal myocardium from infarcted animals showed these same changes when compared against normal myocardium from animals without infarction. Ca-45 uptake into intact myocardium and specifically the mitochondrial fraction were still increased more than threefold during the 24-hour period prior to sacrifice on the fifth postinfarction day. Myocardial calcium appears to be in a readily exchangeable equilibrium with circulating serum calcium even in this late stage in the evolution of the infarction

**A75-43350** Optokinetic nystagmus during selective retinal stimulation M Cheng and J S Outerbridge (Royal Victoria Hospital, Montreal, Canada) *Experimental Brain Research*, vol 23, Aug 14, 1975, p 129-139 13 refs Medical Research Council of Canada Grant No MA-3794

Nystagmic eye movements in response to selective optokinetic stimulation of different parts of the retina were studied in normal human subjects by two methods: (1) a digital computer controlled by the eye movement signal was used to generate an optokinetic display which stimulated only the peripheral retina, in turn simulating a central scotoma, and (2) a single dot of 0.6 degrees in diameter was used as the stimulus during maintained forward gaze. Results show that stimulation of the central or peripheral retina alone can produce optokinetic nystagmus in man, and that essentially the same type of nystagmus is produced in both cases. The slow phase velocity of nystagmus evoked from the peripheral retina falls off rapidly with distance from the fovea but can be facilitated by attention. Results are compared with other findings and a possible explanation is offered for the observed variation in slow phase speed which occurs during constant-velocity optokinetic stimulation

**A75-43423** Reaction times in the detection of gratings by human observers - A probabilistic mechanism D J Tolhurst (Physiological Laboratory, Cambridge, England) *Vision Research*, vol 15, Oct 1975, p 1143-1149 15 refs

Reaction times were measured for sinusoidal gratings which were flashed on with various temporal waveforms. The contrast was close to threshold. At low spatial-frequencies, the reaction times were grouped just after any sudden transients in the stimulus, even when this was at the end of the stimulus. At higher spatial-frequencies, the reaction times were not related to the time of sudden changes in contrast but were distributed throughout the body of the stimulus, the longer the stimulus duration, the greater was the chance that the stimulus would be detected. These results can be explained if a stimulus can be detected at any time when the visual system's response to it is moderately high and not simply at the time when the response is greatest. At low spatial-frequencies, the channels have transient step-responses, at higher frequencies, the responses are sustained. (Author)

**A75-43424** Sustained and transient channels in human vision D J Tolhurst (Physiological Laboratory, Cambridge, England) *Vision Research*, vol 15, Oct 1975, p 1151-1155 12 refs

The sensitivity for 4 msec flashes of sinusoidal grating was determined at various times during and after a subthreshold 800 msec flash of grating of the same spatial-frequency. At frequencies of 2 c/deg and below, the sensitivity to the short flash was transiently changed for about 100 msec after the onset and the offset of the long flash. If the gratings in the long and short flashes were spatially in phase, the sensitivity to the short flash was increased at the onset of the long flash but was decreased at the offset. A phase-shift of 180 deg caused an inversion of these effects. At higher spatial-frequencies, the sensitivity to the short flash was increased to a new steady level for the duration of the long flash, when the gratings were in phase. A phase-shift of 180 deg did not cause an inversion; the sensitivity was changed transiently at the onset and offset of the long flash. It is argued that the results can be explained by supposing the existence of two types of channel at these spatial-frequencies. (Author)

**A75-43425** Saccadic suppression in the monkey C W Mohler and R Cechner (Case-Western-Reserve University, Cleveland, Ohio) *Vision Research*, vol 15, Oct 1975, p 1157-1160 9 refs. Grants No NIH-RR-07113-03, No NIH-RR-07113-04

Three rhesus monkeys were trained to make a behavioral response to a short duration flash of light presented during the eye movements of optokinetic nystagmus. This behavioral testing demonstrated a visual threshold elevation of 0.5-0.8 log units from 25 msec before until 50 msec after onset of the fast phase of optokinetic nystagmus in the monkey, similar to the phenomenon of saccadic suppression in the human. Following behavioral testing, chronically implanted electrodes in the striate visual cortex of these monkeys measured the visual evoked response during suppression of the monkey's behavioral response. The cortical response to light was decreased during the fast phase of optokinetic nystagmus, but this reduction in visual cortical response was not specifically related to the decrease in the monkey's perception of the light. **A75-43434** Anaerobic recovery in man P Cerretelli, G Ambrosoli, and M Fumagalli (Milano, Università, CNR, Centro Studi di Fisiologia del Lavoro Muscolare, Milan, Italy) *European Journal of Applied Physiology*, vol 34, no 3, 1975, p 141-148 22 refs

The present study experimentally investigated the possible occurrence of anaerobic recovery in the human body. Subjects were exercised for 20 sec at supramaximal level, then at maximal level for 3 min. During both periods, blood lactate concentration was

measured. It was found to increase consistently during the 3-min period, after a sharp rise during the 20-sec period. This finding is taken to be evidence for energy production in the muscle by anaerobic glycolysis. S J M

**A75-43435** Experimental study of the performance of competition swimmers J P Charbonnier, J R Lacour, J Riffat, and R Flandrois (CNRS, Laboratoire de Physiologie, Lyons, Saint-Etienne, Université, Saint-Etienne, France) *European Journal of Applied Physiology*, vol 34, no 3, 1975, p 157-167 29 refs

Experiments were conducted to determine the availability of power and the forces opposing forward motion in swimming. A parameter designated VO<sub>2</sub> max water showed a high correlation with competition performances of the swimmers tested. This parameter equals VO<sub>2</sub> max arm work plus one-sixth of the difference between VO<sub>2</sub> max leg work and VO<sub>2</sub> max arm work. Leg and arm maximum oxygen uptake rates were measured in the laboratory; they were fairly close to each other for swimmers, but leg VO<sub>2</sub> max was larger than arm VO<sub>2</sub> max for nonswimmers. S J M

**A75-43436** Ammonia production following maximal exercise - Treadmill vs bicycle testing J E Wilkerson, D L Batterton, and S M Horvath (California, University, Santa Barbara, Calif.) *European Journal of Applied Physiology*, vol 34, no 3, 1975, p 169-172 10 refs Grant No AF AFOSR-73-2455

Out of a population of 20 healthy male volunteers, half performed constant-speed incremental-load maximal aerobic-capacity tests on a motor-driven treadmill, while the other half performed similar tests on a bicycle ergometer. The two groups, matched for size and age, showed no significant differences in maximal aerobic capacity, maximum heart rate, or post-exercise (4 min) peripheral venous-blood concentrations of lactate or pyruvate. However, post-exercise peripheral venous-blood ammonia levels were significantly higher in the group tested on the bicycle ergometer than in the treadmill group. (Author)

**A75-43437** Leg muscle metabolism during exercise in the heat and cold W J Fink, D L Costill, and P J Van Handel (Ball State University, Muncie, Ind.) *European Journal of Applied Physiology*, vol 34, no 3, 1975, p 183-190 12 refs Research supported by Ball State University, Grant No NIH-R01-AM-17083-01

Experiments are reported which demonstrate that the rate of glycolysis during exercise in man is enhanced in the heat as compared with in cold environments. This conclusion is substantiated by greater blood lactate concentration and muscle glycogen utilization in the heat than in the cold. The findings are compatible with earlier studies showing a decreased availability of muscle oxygen to muscle vasoconstriction in the heat. These factors may in part account for the exhaustion frequently observed during prolonged heavy exercise in warm environments. S J M

**A75-43500** Visual texture as a factor in the apparent velocity of objective motion and motion aftereffects J T Walker (Missouri, University, St Louis, Mo) *Perception and Psychophysics*, vol 18, no 2, Aug 1975, p 175-180 18 refs Grant No PHS-1-R03 MH-18809-01

The apparent velocity of an objectively rotating visually textured disk is an increasing monotonic function of the coarseness (size) of visual texture. The apparent velocity of a negative motion aftereffect increases with coarseness of moving induction texture but decreases with coarseness of stationary test texture, and there is an interaction between induction and test textures. An explanation of these effects is based principally on the assumption of greater lateral inhibition between neighboring elements in finer textures. (Author)

**A75-43820** # Acoustic Doppler echocardiograph (Ul'trakvokoi Dopplerovskii ekhokardiograf) V A Boltenkov and V N Pervushin (Odesskii Politekhnicheskii Institut, Odessa, Ukrainian

SSR) *Akustika i Ul'trazvukovaia Tekhnika*, no 10, 1975, p 42-46  
In Russian

The design and principles of operation of an acoustic Doppler echocardiograph with improved measurement characteristics for evaluating the biomechanics of the cardiac cycle are described. The possibility of developing a phase-meter acoustic Doppler system for measuring the distance from emitter to sounded object is examined. The capability of the system to measure the velocity of the motion of the sounded object is discussed. S D

**A75-43844** Optimum uses of psychobiological, sensorimotor, and performance measurement strategies E A Alluisi (Old Dominion University, Norfolk, Va) *Human Factors*, vol 17, Aug 1975, p 309-320 26 refs Grant No DAHC19-74-G-0018, Contract No N00014-70-C-0350 ARPA Order 1595

The selection of a criterion, index, or output to measure, when an experiment is planned will influence not only the conduct of the study, but also the findings and the generalizations that can properly be made on the basis of the results. Guidelines for making such selections among psychobiological, sensorimotor, and performance measurement domains are presented, based on the summary findings of research in four areas: the behavioral effects of (1) occupational exposure to inorganic lead, (2) exposure to carbon monoxide, (3) sleep loss, and (4) infectious disease. Three dimensions that must be considered in order to optimize the selection are (1) the purpose, immediate and distal, of the specific study, (2) the degree of specificity vs generality of the organismic changes involved, and (3) the desired area(s) of generalization of the results or findings of the study. (Author)

**A75-43845** Visual time compression - Spatial and temporal cues L A Scanlan (Illinois, University, Urbana, Ill) *Human Factors*, vol 17, Aug 1975, p 337-345 14 refs Contract No F44620-70-C-0105

An experiment was performed to compare target detection performance on a standard time-compressed display with performance on two displays that provided both spatial and temporal target cues. A time-compressed display, which is one way to accentuate the coherent motion of targets relative to random noise on a radarscope, is obtained by storing several past image frames and playing them back in the order in which they were collected, but at a faster rate. Tremendous improvements in target detection performance were indeed realized by the addition of spatial cues, eight stored frames was the optimum number for best performance. S J M

**A75-43846** The effect of target surround density on visual search performance T H Monk and B Brown (Nottingham University, Nottingham, England) *Human Factors*, vol 17, Aug 1975, p 356-360 21 refs Science Research Council Grant No B/SR/8627

Results of visual search tests are reported which show that increasing the target surround density in a display has a camouflaging, rather than an enhancing, effect. Target surround density was measured by summing the number  $n$  of nontargets in the four cardinal positions of the target surround with the number  $c$  of nontargets in the four corners of the target surround. This sum could be any integer from 0 to 8, and the desired number was programmed into the computer generating the display. The least squares fit between geometric mean search time and this number produced a linear correlation, thus substantiating the above conclusion. S J M

**A75-43847** Pacing, product complexity, and task perception in simulated inspection L H McFarling (U S Army, Fort Sam Houston, Tex) and N W Heimstra (South Dakota, University, Vermillion, S Dak) *Human Factors*, vol 17, Aug 1975, p 361-367 8 refs Grant No PHS-5-T01-OH-00002

This investigation examined potential performance or motivational differences between self-paced and machine-paced inspection tasks, and measured subject perceptions of inspection tasks. Twenty women served as inspectors in the investigation. Subjects in both self-paced and machine-paced conditions inspected simulated printed circuits varying in circuit complexity. Performance measures of

defect detection rate, false alarm rate, and time required for decision were recorded. Self-paced subjects performed better, but both groups suffered performance decrements on the more complex circuits. Both groups found the task basically dull and uninteresting. (Author)

**A75-43848** Motion relationships in aircraft attitude and guidance displays - A flight experiment S N Roscoe and R C Williges (Illinois, University, Urbana, Ill) *Human Factors*, vol 17, Aug 1975, p 374-387 25 refs Navy-sponsored research

Sixteen nonpilot Naval ROTC students were tested on tasks involving conflicting visual and vestibular cues while flying with each of four basic aircraft attitude presentations (moving horizon, moving airplane, frequency-separated, and kinalog) in a Beechcraft C-45H airplane. Flight-director versions of each display presenting either compensatory or pursuit steering guidance were also compared on a command flight path tracking task involving random heading changes. For all attitude presentations, pursuit tracking was superior to compensatory tracking and the order of merit of the four attitude presentations in flight casts doubt upon the validity of previous simulator experiments. It was concluded that the principle of display frequency separation provides at least equivalent pilot steering-performance to that obtained with the conventional moving horizon format, while the anticipatory cues it affords tends to reduce the incidence of control reversals under circumstances of subliminal angular acceleration by providing initial direction-of-motion compatibility. (Author)

**A75-43849** Aircraft simulator motion and the order of merit of flight attitude and steering guidance displays F Inc, R C Williges, and S N Roscoe (Illinois, University, Urbana, Ill) *Human Factors*, vol 17, Aug 1975, p 388-400 22 refs Navy-USAF-supported research

Nonpilot subjects were tested in various simulated flight tasks in order to provide information concerning both the frequency-separated display principle and the effects of simulated motion cues. The frequency-separated display tested led to reductions in disturbed attitude tracking errors, in the incidence of control reversals, and in recovery times to level flight from unknown attitudes. Two modes of simulator motion (steady bank angle and constant roll) were tested and both facilitated disturbed attitude tracking performance, but inappropriate gravitational forces created by sustained banking motion interfered with command flight path tracking. 'Washout motion' (constant roll) gave results most closely approximating flight data. The present study was based in format on the previous investigation by Roscoe and Williges (1975). It is concluded that caution must be exercised in generalizing experimental findings in simulators with no cockpit motion, or with inappropriate acceleration cues, to flight performance prediction. S J M

**A75-43850** The transition of experienced pilots to a frequency-separated aircraft attitude display D B Beringer, R C Williges, and S N Roscoe (Illinois, University, Urbana, Ill) *Human Factors*, vol 17, Aug 1975, p 401-414 19 refs Navy-sponsored research

Independent groups of eight professional pilots each were given one flight in a Link GAT-2 simulator and one flight in a Beechcraft C-45H using, respectively, the moving horizon, moving airplane, and frequency-separated attitude displays. The flight tasks performed by the subjects included recovery from unknown attitudes, disturbed attitude tracking, and completion of an area navigation course. Data collected in the C-45H aircraft demonstrated superior performance of both the frequency-separated and moving horizon displays when compared to the moving airplane display during unknown attitude recoveries. The frequency-separated display was superior to all others during disturbed attitude tracking. It was concluded that the flight performance of experienced pilots during their initial transition to a frequency-separated flight attitude presentation is at least comparable, and for some tasks superior, to their flight performance with the conventional moving horizon presentation. (Author)

**A75-43888** The origin of optical asymmetry on earth T L V Ulbricht (Agricultural Research Council, London, England) *Origins of Life*, vol 6, July 1975, p 303-315 67 refs

The nature of optical isomerism, and the problem of the origin of optical asymmetry in relation to the origin of life are defined. Developments in particle physics, such as the discovery of parity nonconservation in weak interactions and more recently, of neutral currents, are described. Their significance is that there are a number of possible mechanisms whereby the fundamental asymmetry of matter could be reflected in a preference for one enantiomer over the other, and that, contrary to long-established views, optical isomers do not have identical energy contents. The difference, however, is estimated to be very small. Theories regarding the origin of optical asymmetry are classified in a two-dimensional matrix (origin by chance or due to already existing order, susceptible or not susceptible to experimental test). Recent experimental results and theoretical speculations are reviewed, and proposals are made for further experimental work. (Author)

**A75-43889** Nonlinear mathematical models for the origin of asymmetry in biological molecules A R Hochstim *Origins of Life*, vol 6, July 1975, p 317-366 45 refs

The theory of the origin of chirality via a difference in the initial concentrations of two separate populations of primeval organic molecules and possibly even two types of primeval organisms is discussed. In this theory, chance factors would cause either L- or D-molecules to become extinct, and nonlinear kinetic processes would amplify the asymmetry between the rate constants of formation for the two types of molecules, leading to the death of one enantiomorph. Spatial diffusion could lead to spatial separation between the enantiomorph populations. The works of Frank (1953) and Calvin (1969) play an integral role in the analysis. S J M

**A75-43890 \*** Asymmetric adsorption by quartz - A model for the prebiotic origin of optical activity W M Bonner, P R Kavasmanek, F S Martin (Stanford University, Stanford, Calif.) and J J Flores (NASA, Ames Research Center, Planetary Biology Div., Moffett Field, Calif.) *Origins of Life*, vol 6, July 1975, p 367-376 31 refs Grant No NGL-05-020-582

One mechanism previously proposed for the abiotic accumulation of molecules of one chirality in nature is asymmetric adsorption on the chiral surfaces of optically active quartz crystals. Earlier literature in this field is reviewed, with the conclusion that previous investigations of this phenomenon, using optical rotation criteria, have afforded ambiguous results. We now have studied the adsorption of radioactive D and L-alanine on powdered d and L-quartz, using change in radioactivity level as a criterion for both gross and differential adsorption. d-Quartz preferentially adsorbed D-alanine from anhydrous dimethyl-formamide solution, and L-quartz L-alanine. The differential adsorption varied between 10 and 18%. The implications of these observations are discussed from the viewpoint of early chemical evolution and the origin of optically active organic compounds in nature. (Author)

**A75-43891** The temperature dependences of some types of gaseous ionic reactions of astrochemical interest M Meot Ner and F H Field (Rockefeller University, New York, N Y) *Origins of Life*, vol 6, July 1975, p 377-393 23 refs NSF-supported research

The rate constants of ion-molecule reactions which are of potential significance in astrochemical systems are found to exhibit significant, and in many cases, negative temperature dependences. The rate constants of fast ion-polar molecule reactions (e.g.,  $XH(+) + B$  yields  $BH(+) + X$ ) may increase by a factor of 5-10 between 1000 and 10 K. Slow reactions that proceed via reaction complexes (e.g., H(-) transfer and association reactions) often exhibit temperature dependences of the form  $k = A(T^{-n})$ ,  $n = 1-5$ . Both transition state theory considerations and the coupled-oscillator RRRK-type model are seen to be able to account qualitatively for the behavior of slow ion-molecule reactions. (Author)

**A75-43892 \*** Fluorescence detection of organic molecules in the Jovian atmosphere. J S. Levine and R S. Rogowski (NASA,

Langley Research Center, Environmental and Space Sciences Div., Hampton, Va) *(Conference on the Chemical Evolution of the Giant Planets, University of Maryland, College Park, Md., Oct 23-26, 1974) Origins of Life*, vol 6, July 1975, p 395-399 21 refs

A search for fluorescent emission due to the presence of possible organic molecules in the Jovian atmosphere is described. We first consider natural Jovian fluorescent emission excited by precipitating auroral particles. Due to our lack of knowledge of the Jovian precipitating particle energies and fluxes we next consider fluorescent emission excited by a laser system aboard a Jupiter spacecraft. Laser-induced fluorescence is routinely used to monitor trace constituents and pollutants in the terrestrial atmosphere. Several spacecraft laser systems are currently under development. Our calculations indicate that laser-induced fluorescent detection is approximately two orders of magnitude more sensitive than rocket ultraviolet measurements of possible Jovian absorption features at 2600 Å that have been attributed to the presence of adenine or benzene. (Author)

**A75-43893** Synthesis of biological molecules on molecular sieves G Poncelet, A T Van Assche, and J J Frépiat (Laboratoire de Physico-Chimie Minerale, Louvain-la-Neuve, Belgium) *Origins of Life*, vol 6, July 1975, p 401-406 6 refs

Tests were conducted to determine whether zeolite catalysts (Ca Y, NH<sub>4</sub>-Y, and Fe-X sieves) would enable biological molecules to form from simple gaseous molecules commonly found in planetary atmospheres. In the experiments, several amino acids were detected by an amino acid analyzer after heating CO and NH<sub>3</sub> with the catalysts. Radioactive tracers were used to determine whether such production was due to contamination, and the tracers ruled out this possibility. S J M

**A75-43894** Polymerization of amino acid methyl esters via their copper complexes A Brack, D Louembe, and G Spach (CNRS, Centre de Biophysique Moléculaire, Orléans, Loiret, France) *(International Conference on the Origin of Life, 4th, Barcelona, Spain, June 1973) Origins of Life*, vol 6, July 1975, p 407-411 11 refs

Polymerization of glycine methyl ester catalyzed by cupric ions in organic solvents yields oligoglycines with a degree of polymerization up to nine. With a trifunctional amino acid, the yield and degree of polymerization were much lower. Extension of this reaction to an aqueous medium was not successful even when copper ions were complexed with substances like montmorillonite or fatty acids. The prebiotic significance of this reaction is discussed. (Author)

**A75-43895** Primary catalytic systems of biogenesis and structure-functional evolution of biocatalysts G Georgiev (Sofiiski D'rzhaven Universitet, Sofia, Bulgaria) and N Bak'rzhieva (Bulgarian Academy of Sciences, Institute of Plant Physiology, Sofia, Bulgaria) *Origins of Life*, vol 6, July 1975, p 413-421 60 refs

An important aspect of biological evolution is the development of biocatalysts. The connection between abiotic and biological catalysts is discussed, and the role of metal ions as primary catalysts is considered. The evolutionary demand for greater specificity and efficiency may have been fulfilled through the formation of metal-organic complexes and later through enzyme systems. Metal ions are probably responsible for the formation of some of the isoenzymes found in contemporary organisms. (Author)

**A75-43896** Speculations on the evolution of the genetic code H Hartman (Tel Aviv University, Tel Aviv, Israel) *Origins of Life*, vol 6, July 1975, p 423-427 17 refs

An evolutionary scheme is postulated in which the bases enter the genetic code in a definite temporal sequence and the correlated amino acids are assigned definite functions in the evolving system. The scheme requires a singlet code (guanine coding for glycine) evolving into a doublet code (guanine-cytosine doublet coding for glycine (GG), ala (GC), arg (CG), and pro (CC)). The doublet code evolves into a triplet code. Polymerization of nucleotides is thought to have been by block polymerization rather than by a template mechanism. The proteins formed at first were simple structural peptides. No

direct nucleotide-amino acid stereo-chemical interaction was required. Rather an adaptor-type indirect mechanism is thought to have been functioning since the origin (Author)

**A75-43897 \*** **Exponential kinetics of formation of organic microstructures** C L Fraser and C E Folsome (Hawaii, University, Honolulu, Hawaii) *Origins of Life*, vol 6, July 1975, p 429-433 5 refs Research supported by the University of Hawaii, Grant No NGR-12-001-109

Organic microstructure production in Miller-Urey spark discharge flasks is an energy-dependent, autocatalytic process which follows first order kinetics similar to microbial growth curves. These relationships hold for all three major morphological types of microstructures observed. The three types are assembled from smaller precursor subunits which associate according to a binomial distribution. These structures could have formed bounded systems in which pre-biological processes might have occurred (Author)

**A75-43898** **On the evolution of the photosynthetic pigments** V B Evstigneev (Academy of Sciences, Institute of Photosynthesis, Moscow, USSR) *Origins of Life*, vol 6, July 1975, p 435-439 11 refs

Some properties of tetrapyrroles with a closed porphyrin ring containing a metal ion in the center are discussed in connection with their relative evolutionary photosynthetic value. It is concluded that the pigment composition of the photosynthetic apparatus of present-day organisms is the result of a long period of evolutionary selection of the most suitable major pigment and of the best relationship between this pigment and other pigments, some of which were later relegated to minor roles S J M

**A75-43899** **On the origin of plastids** M S Odintsova and N P Iurina (Academy of Sciences, Institute of Biochemistry, Moscow, USSR) *Origins of Life*, vol 6, July 1975, p 441-446 9 refs

The buoyant density in CsCl of ribosomes from chloroplasts of the green alga Chlorella pyrenoidosa and two species of higher plants, Pisum sativum and Chenopodium album, has been studied. From the relative protein content it was calculated that 70S ribosomes from chloroplasts are much smaller than 80S cytoplasmic ribosomes (3.0-3.1 million and 4.0 million daltons, respectively) and slightly larger than 70S ribosomes from bacteria (E. coli 2.5 million daltons). Chloroplast ribosomes from pea seedlings were analyzed by two-dimensional polyacrylamide gel electrophoresis. They appear to contain 71 proteins. This indicates that chloroplast ribosomes contain a larger number of proteins than do the ribosomes from E. coli and other species of Enterobacteriaceae. Further study will permit a probable evaluation of the validity of Mereschkowsky's hypothesis that the photosynthetic plastids of eukaryotic plant cells are the evolutionary descendants of endosymbiotic blue-green algae (Author)

**A75-43900** **Stanford workshop on extraterrestrial civilization - Opening a new scientific dialog** J B Carlson (Maryland, University, College Park, Md) and P A Sturrock (Stanford University, Stanford, Calif) *Origins of Life*, vol 6, July 1975, p 459-470 11 refs

The existence of extraterrestrial civilization (ETC), interstellar communication, human contact with ETC, unidentified flying object (UFO) evidence, the evaluation of UFO phenomena, and the assessment of our ignorance about the universe are discussed. The organization of the Stanford workshop (August 29-30, 1974) convened to study these topics is also described. There were two groups of scientists those considering physical, astronomical, and biological theoretical knowledge relative to ETC and searching for extraterrestrial radio signals, and those pursuing the UFO problem by analyzing eyewitness reports and photographs S J M

**A75-43941** **Coronary artery cyclic AMP content during adrenergic receptor stimulation** C L Seidel, R L Schnarr, and H

V Sparks (Michigan, University, Ann Arbor, Mich) *American Journal of Physiology*, vol 229, Aug 1975, p 265-269 14 refs

The hypothesis that changes in cyclic AMP content mediate mechanical response of coronary smooth muscle following adrenergic receptor stimulation is tested. Tension changes in strips of coronary smooth muscle following addition of agonists or adrenergic blocking agents to the surrounding bath are measured, and the level of cyclic AMP in identically treated strips is determined by chromatography and radioimmunoassay. Results indicate that while the contraction of coronary arteries associated with alpha-receptor stimulation is not mediated by changes in cyclic AMP content, an increase in cyclic AMP may mediate relaxation associated with beta-receptor stimulation C K D

A study is summarized which demonstrates that depletion of the biogenic amines 5-hydroxytryptamine (5-HT) or norepinephrine (NE) alters the normal thermoregulatory responses to acute temperature stress. Specifically, NE depletion caused a significant depression in equilibrium rectal temperature at 22°C and a greater depression in rectal temperature than controls in response to cold (6°C) stress. NE depletion also resulted in a significantly higher rectal temperature response to acute heat (38°C) stress. Depletion of 5-HT had less severe effects. It remains unclear whether the primary site of action of these agents is central or peripheral S J M

**A75-44049 #** **Effect of linear acceleration on nystagmic response induced by angular acceleration** (Vlianie lineinogo uskorenija na nystagmennuju reakciju, vyzvannuju uglovym uskoreniem) F A Solodovnik *Fiziologija Cheloveka*, vol 1, Mar-Apr 1975, p 271-275 20 refs In Russian

Experiments were conducted to study the effect of linear acceleration on the nystagmic response of healthy subjects (aged 20-32 yr) sitting in a rocker provided with a rotating seat. The relation of the degree of nystagmus to the type of stimulation of the otolithic apparatus is identified. It is shown that under linear acceleration, the nystagmic response caused by angular accelerations changes only under the action of negative angular acceleration. There was no great difference in the degree of nystagmus for a linear acceleration in the sagittal and frontal planes. Experimental results

suggest that stimulation of the otolithic apparatus may affect the nystagmus response only at the moment the apparatus is stimulated

A75-44050 # Characteristics of the regulation of cardiac rhythm during mental work (Osobennosti regulatsii serdechnogo ritma pri umstvennoi rabote) R M Baevskii and V I Kudriavtseva (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR) *Fiziologiya Cheloveka*, vol 1, Mar-Apr 1975, p 296-301 25 refs In Russian

The characteristics of the regulation of cardiac rhythm are studied as a function of the degree of mental fatigue during prolonged monotonous work in a man/machine system. It is shown that during a mental work associated with receiving and decoding of numerical and alphabetic information, changes in the statistical characteristics of cardiac rhythm are observed beginning with the 3rd to 4th hour of work, due to the regulatory activity of the autonomic nervous system and the subcortical centers. Early signs of mental fatigue are found to be a decrease in the mode amplitude (number of cardiointervals whose magnitude corresponds to the mode), an increase in the variational range, a decrease in the stress index, and an increase in the amplitude of the slow waves of cardiac rhythm with a period of 30-70 sec

A75-44051 # Frequency characteristics of the regulatory systems of the heart (Chastotnye kharakteristiki regulatorynykh sistem serdtsa) V L Karpman and M G Bershadskii (Tsentral'nyi Institut Fizicheskoi Kul'tury, Moscow, USSR) *Fiziologiya Cheloveka*, vol 1, Mar-Apr 1975, p 359-365 16 refs In Russian

This study is concerned with the frequency analysis of the functional effectiveness of the regulatory systems of the heart in well-trained athletes. The input signals correspond to bicycle ergometric loads varying in accordance to a sinusoidal, while the output signals are represented by the variation of heart rate, the duration of isometric and isotonic contractions of the heart. The frequency range of the input loads is split into three zones: (1) frequency of load oscillations ranging from extremely low frequencies to nearly 0.04 rad/sec zone of optimal regulation of cardiac activity, where the amplitude and frequency distortions are small, (2) from 0.04 to 0.28 rad/sec zone characterized by disorders in the adaptation of the heart and its regulatory systems to varying loads, where the amplitude and frequency distortions are well pronounced, and (3) from 0.28 rad/sec on zone of insensitivity to the regulatory systems of the heart. Athletes training for endurance are found to exhibit higher indices of regulation than those engaged in power types of physical activities  
SD

A75-44106 # Effects of aircraft simulator motion cue fidelity on pilot performance R C Williges, C O Hopkins, and D J Rose (Illinois, University, Urbana, Ill) *Deutsche Gesellschaft fur Ortung und Navigation, Nationale Tagung uber Simulation im Dienste des Verkehrs, Bremen, West Germany, Apr 15-17, 1975, Paper 12* 11 p 18 refs

Studies were conducted to determine whether and how required simulator cue fidelity varies with desired application of a simulator. When the simulator was used for equipment design research, high-fidelity washout motion (where rate of roll of the simulated airplane is the input to the simulator roll axis instead of bank angle) produced results most comparable to the aircraft. When the simulator was used for pilot proficiency assessment, less realistic sustained motion (with the cockpit following a scaled-down linear analog of the bank angle of the simulated airplane after a certain time lag) provided simulator check-ride data of the highest predictive value. When the simulator was used as a synthetic training device for instrument-referenced maneuvers, the no-motion condition yielded as much transfer as either of the other simulator motion modes

A75-44128 \* # Response and adaptation of Beagle dogs to hypergravity J Oyama (NASA, Ames Research Center, Biomedical Research Div, Moffett Field, Calif) In *Life sciences and space research XIII, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974* Berlin, East Germany, Akademie-Verlag GmbH, 1975, p 11-17 9 refs

Eight male Beagle dogs, five months old, were centrifuged continuously for three months at progressively increasing loads. Heart rate and deep body temperature were monitored continuously by implant biotelemetry. Initially, centrifuged dogs showed transient decreases in heart rate and body temperature along with changes in their diurnal rhythm patterns. Compared with normal gravity controls, exposed dogs showed a slower growth rate and a reduced amount of body fat. Blood protein, total lipids, cholesterol, calcium, packed cell volume, red blood cell count, and hemoglobin were also decreased significantly. Absolute weights of the leg bones of centrifuged dogs were significantly greater than controls. Photon absorptiometry revealed significant density increases in selective regions of the femur and humerus of centrifuged dogs. In spite of the various changes noted, results from this and other studies affirm the view that dogs can tolerate and adapt to sustained loads as high as

25 g without serious impairment of their body structure and function  
(Author)

**A75-44129 \*** # **Gravitational effects on body composition in birds** A H Smith, O Sanchez, and R R Burton (California, University, Davis, Calif) In Life sciences and space research XIII, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974 Berlin, East Germany, Akademie-Verlag GmbH, 1975, p 21-27 11 refs Grant No NGR 05 004-008

Gallinaceous birds, presenting a wide range of body size, were adapted physiologically to hyperdynamic environments, provided by chronic centrifugation. Chemical composition was measured directly on prepared carcasses, which were anatomically comparable, and more amenable to analysis than the intact body. Body mass and body fat decreased arithmetically with increasing field strength and also with increasing body mass. Water content of lean tissue increased in hyperdynamic environments, but irrespectively of body size

**A75-44131 \*** # **Influence of simulated weightlessness on the rate of anomalies of the flour beetle *Tribolium confusum*** W Bruegleb, J Neubert, A Schatz, and F Sinapius (Deutsche Forschungs- und Versuchsanstalt fu Luft- und Raumfahrt, Institut für Flugmedizin, Bad Godesberg, West Germany) In Life sciences and space research XIII, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974 Berlin, East Germany, Akademie Verlag GmbH, 1975, p 49-52 11 refs

Experiments with *Tribolium confusum* showed that the morphological characteristics of the beetles are modified by simulated weightlessness (fast running clinostat). Because of possible side effects due to differences in fertility of inbred lines, the first experiments were made with a genetically heterogeneous stock. Thereafter experiments were continued with inbred beetles. For both stocks a rise of mainly wing anomalies resulted from rotation of whole cultures of beetles within horizontal tubes. The extent to which these anomalies are teratogenic or genetic has not yet been analysed in detail  
(Author)

**A75-44132 \*** # **The development of seedling shoots under space flight conditions** A J Merkys, A L Mashinskii, R S Laurinavicius, G S Nechitailo, A V Iaroshius, and E A Izupak (Lithuanian Academy of Sciences, Institute of Botany, Vilnius, Lithuanian SSR) In Life sciences and space research XIII, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974 Berlin, East Germany, Akademie-Verlag GmbH, 1975, p 53-57 5 refs

Experiments were conducted to determine whether seeds could germinate in a weightless environment, and if so what would determine the direction they germinated in. Germination was 100% under both experimental and control conditions, and it is concluded that germination, growth, and morphogenesis of a shoot in space flight takes place without significant change from normal. Thus the

first phases of growth are already determined in the embryo and do not need the action of gravity for successful morphogenesis of the seedling and root

**A75-44133 \*** # **Is the detection of optical activity in extraterrestrial samples a safe indicator for life?** W Thiemann (Kernforschungsanlage Jülich GmbH, Jülich, West Germany) In Life sciences and space research XIII, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974 Berlin, East Germany, Akademie-Verlag GmbH, 1975, p 63-69 30 refs

The validity of using optical activity testing of extraterrestrial samples to determine the existence of living matter is investigated. It has been shown that spontaneous deracemization can occur without the aid of life, so such a method would not be foolproof. Polarimetric measurements could be useful, however, if (1) they were performed at least three wavelengths of the Hg spectrum to yield some information about the optical rotatory dispersion of the sample, (2) they were performed on many (between 10 and 100) independently collected samples, and (3) correlation of optical activity with definite chemical structures was achieved  
S J M

**A75-44134 \*** # **Radio-chemical synthesis of amino acids in aqueous media containing carbohydrates, hydrocarbons and nitrates** M A Khenokh, E A Kuzicheva, and E M Lapinskaia (Academy of Sciences, Institute of Cytology, Leningrad, USSR) In Life sciences and space research XIII, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974 Berlin, East Germany, Akademie-Verlag GmbH, 1975, p 71-74 8 refs

Experiments were performed to determine whether solutions of carbohydrates, hydrocarbons, and inorganic nitrate would form amino acids under ionizing irradiation. It was found that this is so, and thus it is concluded that a similar process took place during prebiological chemical evolution on earth. Since amino acids with long carbon chains were the most susceptible of the acids formed to radiolytic destruction, it is suggested that polypeptides first formed in the primary hydrosphere were composed mainly of amino acids with short carbon chains

**A75-44136 \*** # **Membrane damage in dehydrated bacteria and its repair** M Frankenberg-Schwarz, G Turcu, C Thomas, H Wollenhaupt, and H Bucker (Frankfurt, Universität, Frankfurt am Main, West Germany) In Life sciences and space research XIII, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974 Berlin, East Germany, Akademie-Verlag GmbH, 1975, p 83-88 9 refs

The dehydration of bacteria by vacuum exposure results in damage to the cell membrane. This membrane damage does not necessarily lead to cell death. A part of the dehydrated bacteria is capable of eliminating the membrane damage by repair processes. Repair can proceed rapidly under conditions that permit synthesizing activities. The kinetics of this repair process were studied by means of the membrane-mediated biosynthesis of the cell wall as well as by

the recovery of resistance to small concentrations of lysozyme Repair is a precondition for cell proliferation At low temperature cells can conserve their membrane damage and the repair process can be initiated when conditions become favorable (Author)

**A75-44138 # New methodology for assessing the probability of contaminating Mars** D W North, B R Judd, and J P Pezier (Stanford Research Institute, Menlo Park, Calif) In *Life sciences and space research XIII, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974* Berlin, East Germany, Akademie Verlag GmbH, 1975, p 103-109 8 refs

New methodology is proposed to assess the probability that the planet Mars will be contaminated by terrestrial microorganisms aboard a spacecraft Present NASA methods are based on the Sagan-Coleman formula, which states that the probability of contamination is the product of the expected microbial release and a probability of growth The proposed new methodology extends the Sagan Coleman approach to permit utilization of detailed information on microbial characteristics, the lethality of release and transport mechanisms, and of other information about the Martian environment Three different types of microbial release are distinguished, and for each release mechanism a probability of growth is computed Using this new methodology an assessment has been carried out for the 1975 Viking landings on Mars The resulting probability of contamination for each Viking lander, 0 000006, is based on expert judgment and is amenable to revision as additional information becomes available (Author)

**A75-44139 \* # Consideration of probability of bacterial growth for Jovian planets and their satellites** D M Taylor, R M Berkman, and N Divine (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif) In *Life sciences and space research XIII, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17 July 1, 1974* Berlin, East Germany, Akademie Verlag GmbH, 1975, p 111-118 16 refs Contract No NAS7-100

Environmental parameters affecting growth of bacteria (e.g., moisture, temperature, pH, and chemical composition) were compared with current atmospheric models for Jupiter and Saturn, and with the available physical data for their satellites Different zones of relative probability of growth were identified for Jupiter and Saturn, with the highest in pressure regions of 1 10 million N/sq m (10 to 100 atmospheres) and 3 30 million N/sq m (30 to 300 atmospheres), respectively Of the more than two dozen satellites, only the largest (Io, Europa, Ganymede, Callisto, and Titan) were found to be interesting biologically Titan's atmosphere may produce a substantial greenhouse effect providing increased surface temperatures Models predicting a dense atmosphere are compatible with microbial growth for a range of pressures at Titan's surface For Titan's surface the probability of growth would be enhanced if (1) the surface is entirely or partially liquid (water), (2) volcanism (in an ice-water-steam system) is present, or (3) access to internal heat sources is significant (Author)

**A75-44140 \* # Flux of high-LET cosmic-ray particles in manned space flight** E V Benton, R P Henke, D D Peterson (San Francisco, University, San Francisco, Calif), J V Bailey (NASA, Johnson Space Flight Center, Houston, Tex), and C A Tobias (California, University, Berkeley, Calif) In *Life sciences and space research XIII, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974* Berlin, East Germany, Akademie-Verlag GmbH, 1975, p 121-128 17 refs

On the Apollo and Skylab missions the high-energy heavy ion (HZE) flux was measured by means of plastic nuclear track detectors Measurements involved the fluxes of high linear energy transfer (LET), particles with Z between 6 and 26 incident on astronauts and on several biological experiments Partial results of these measurements are presented, the effects of shielding and solar modulation are discussed (Author)

**A75-44141 # The study of the radiation environment in near-earth space** V M Petrov, Y A Akatov, S B Kozlova, V V Markelov, V M Nesterov, V I Redko, L N Smirnenni, A V Khortsev, and I V Chernikh (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR) In *Life sciences and space research XIII, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974* Berlin, East Germany, Akademie-Verlag GmbH, 1975, p 129-134 10 refs

Results of daily radiation dose measurements in near-earth space are presented and analyzed It is concluded that (1) dose depends on apogee altitude and inclination, as well as solar activity cycle period (during solar minimum the doses increase by a factor of about two), (2) increasing the shield thickness does not greatly decrease the dose rate, (3) the major portion of the doses is contributed by the high energy protons of the galactic cosmic rays and radiation belt in the South Atlantic Anomaly, and (4) it is relatively safe to orbit with inclinations of less than 62 deg and apogees of less than 350 km, provided there are no strong solar flares S J M

**A75-44142 \* # Physical dosimetric evaluations in the Apollo 16 microbial response experiment** G R Taylor, J V Bailey (NASA, Johnson Space Center, Life Sciences Directorate, Houston, Tex), and E V Benton (San Francisco, University, San Francisco, Calif) In *Life sciences and space research XIII, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17 July 1, 1974* Berlin, East Germany, Akademie-Verlag GmbH, 1975, p 135-141 9 refs

Texts of high-energy multicharged particle, ultraviolet light, and galactic irradiation fluxes on exposed biological specimens aboard Apollo 16 are described Passive nuclear track detectors, passive dosimeters, and thermoluminescent dosimeters, respectively, were used for the measurements Biological phenomena studied ranged from lipolytic alpha toxin production in *Bacillus thuringiensis* to animal tissue invasion (of human hair by *Trichophyton terrestris*) Fluxes observed were lower than those recorded by detectors located in the Biostack and in the passive personnel dosimeters worn by the astronauts, suggesting a greater average shielding in the latter two environments S J M

**A75-44143 \* # Effects of solar ultraviolet radiations on *Bacillus subtilis* spores and T-7 bacteriophage** J Spizizen, J E Isherwood (Scripps Clinic and Research Foundation, La Jolla, Calif), and G R Taylor (NASA, Johnson Space Center, Houston, Tex) In *Life sciences and space research XIII, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974* Berlin, East Germany, Akademie-Verlag GmbH, 1975, p 143-149

Spores of *Bacillus subtilis* HA 101 and the DNA polymerase I-defective mutant HA 101 (59)F were exposed to selected wavelengths of solar ultraviolet light and space vacuum during the return of Apollo 16 In addition, coliphage T-7 suspensions were exposed to solar ultraviolet radiation as part of the Microbial Response to Space Environment Experiment Optical filters were employed to provide different energy levels at wavelengths 254 nm and 280 nm Dose-response curves for lethal and mutagenic effects were compared with ground-based data A close parallel was observed between the results of solar radiation and ground tests with spores of the two strains However, significantly greater inactivation of T-7 bacteriophage was observed after exposure to solar ultraviolet radiation (Author)

**A75-44144 # Radiobiological results of the Biostack experiment on board Apollo 16 and 17** E H Graul, W Ruther (Klinik und Poliklinik für Nuklearmedizin, Marburg an der Lahn, West Germany), W Heinrich, O C Alkofer (Kiel, Neue Universität, Kiel, West Germany), R Kaiser, R Pföhl (CNRS, Centre de Recherches Nucléaires de Strasbourg, Strasbourg, France), E Schopper, G Henig, J U Schott, and H Bucker (Frankfurt, Universität, Frankfurt am Main, West Germany) In *Life sciences and space research XIII, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil,*

June 17-July 1, 1974 Berlin, East Germany,  
Akademie Verlag GmbH, 1975, p 153-159 9 refs

The most radiosensitive biological objects in the Biostack experiments have proved to be the shrimp eggs. The development of 500 eggs hit by heavy cosmic ions was investigated. This differed significantly from the flight controls (eggs flown in the Biostack but not hit by heavy ions) and from the ground controls. From this it has been concluded that penetration on the part of a single heavy ion may injure the encysted blastula. This damage was found to influence gastrula formation and even the hatching process of the nauplius. Abnormalities (increased by a factor of 10) in the orthonauplius were observed during the development of the hit eggs, they consisted, for example, of shortened extremities or an abnormal thorax or abdomen. In addition, eggs of *Tribolium confusum* and *Carausius morosus*, which were included in Biostack 2 (Apollo 17), have been investigated, and the influence of single heavy ions on the development process of these highly organized insects has been studied.

**A75-44145 # Results of the *Bacillus subtilis* unit of the Biostack II experiment - Physical characteristics and biological effects of individual cosmic HZE particles** H Bucker, R Fack, D Hildebrand, and G Horneck (Frankfurt, Universität, Frankfurt am Main, West Germany) In *Life sciences and space research XIII*, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974 Berlin, East Germany, Akademie-Verlag GmbH, 1975, p 161-166

The effectiveness of cosmic HZE-particles on unicellular prokaryotic organisms was studied on *Bacillus subtilis* spores, which were accommodated in the Biostack I and II experiments on board Apollo 16 and 17. Identification of the spores that were hit was achieved by using the Biostack sandwich construction and by precise microscopical measurements of tracks of particles. Germination, outgrowth and the rate of cellular elongation were investigated. A method was developed to determine the charge of each individual HZE particle that penetrated a spore and its energy loss in the region of hit. An attempt was made to establish a connection between these physical characteristics and the biological effects produced.

**A75-44146 # Modifying effect of dynamic space flight factors on radiation damage of air-dry seeds of *Crepis capillaris*** L Wallr, E N Vaulina and L N Kostina (Akademie Nauk SSSR, Moscow, USSR) In *Life sciences and space research XIII*, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974 Berlin, East Germany, Akademie-Verlag GmbH, 1975, p 167-172 9 refs

The influence of dynamic factors (vibration and linear acceleration) on the rate of chromosome aberrations in *Crepis capillaris* was studied. The vibrational process simulated was similar in its characteristics to that occurring at the launch of spaceships. In combination with linear acceleration it caused a statistically significant increase in the rate of chromosome aberrations compared with the control ( $R = 7.70$ ). The dynamic factors modified the effect of radiation damage induced by acute gamma-irradiation (3 krad). Pre-radiation treatment with vibration and acceleration on the seeds caused a significant decrease ( $R = 10.23$ ) in the effect of radiation damage, from 15.57% to 9.74%. The post-radiation treatment of *C. capillaris* seeds with the dynamic factors did not change the rate of chromosome aberrations significantly (from 15.57% to 15.90%).

**A75-44147 # Effects of space balloon flights on reproductive activity in *Paramecium aurelia*** H Planel, J P Soleilhavoup, and F Croute (Toulouse III, Université, Toulouse, France) In *Life sciences and space research XIII*, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974 Berlin, East Germany, Akademie-Verlag GmbH, 1975, p 173-180 14 refs

Results of studies on the behavior of *Paramecium* cultures flown in stratospheric balloons and exposed to a high flux of energetic primary and secondary cosmic rays are reported. A constant and significant increase in cellular growth rate was observed when the

ceiling duration did not exceed about 6 hours. A stimulating effect appears to occur only for radiation doses lower than 2 mrads. It is likely that the cosmic radiation acts indirectly through the culture medium, control of factors such as temperature and pressure indicates that the effects observed are indeed due to cosmic radiation. Thus cosmic rays have a stimulating effect in addition to their known higher-dose lethal effect.

**A75-44148 # The effect of ionizing radiations with different LET on survival and mutation in *Chlorella*** N P Dubinin, V A Shevchenko, A V Rubanovich, L K Vekshina, and I S Sakovich (Akademie Nauk SSSR, Moscow, USSR) In *Life sciences and space research XIII*, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974 Berlin, East Germany, Akademie-Verlag GmbH, 1975, p 181-186 14 refs

Experiments were conducted on the relative biological efficiency (RBE) of ionizing radiations with varying linear energy transfer (LET). Survival curves were sigmoid for low LET radiations (such as gamma rays), but they were exponential in the case of high LET radiations (e.g., multiply-charged ions of carbon, boron, and neon). Mutation rate was linear with dose for gamma rays, but it reached a maximum at certain prescribed doses for charged-particle irradiation. The highest RBE occurred with multiply-charged carbon ions.

**A75-44149 # Peculiarities of biological action of hadrons of space radiation I** G Akoev and S S Iurov (Akademie Nauk SSSR, Institut Biofiziki, Pushchino-on-Oka, USSR) In *Life sciences and space research XIII*, Proceedings of the Seventeenth Plenary Meeting, São Paulo, Brazil, June 17-July 1, 1974 Berlin, East Germany, Akademie-Verlag GmbH, 1975, p 187-193 18 refs

A review of experimental data on the somatic and genetic effects of high-energy hadrons is presented, based on data obtained in space and from high-energy accelerator studies, the physical and molecular principles behind these effects are discussed. Data concern relative biological efficiency (RBE) and linear energy transfer (LET). In particular, the results of 70 GeV proton radiation on bacteriophage T4B and *Vicia faba* were studied. It is concluded that the molecular mechanism of mutagenesis under the action of high-energy hadrons is due to multiple DNA changes caused by 'burning' a narrow cone of secondary particles and producing deletions of various dimensions. Moreover, secondary radiation generated by high-energy hadrons upon their interaction with spaceships is likely to be the greatest hazard of radiation during space flights.

**A75-44167 # Experiment in the application of multivariate correlation-regression analysis in physiological studies (Dosvid zastosuvannia mnogochnogo koreliatsionno-regresionnogo analizu u fiziologichnykh doslidzhenniakh)** A S Pavlov (Donets'kiy Medichnyy Institut, Donetsk, Ukrainian SSR) *Fiziologichnyy Zhurnal*, vol 21, July/Aug 1975, p 544-547 12 refs. In Ukrainian

The dynamics of functional stress and the degree of disturbance of thermal homeostasis of an organism under the effect of a critical step probe were studied in four groups of human subjects (non-athletes, persons engaged in regular exercise, gymnasts, and boxers). Multivariate correlation regression analysis was applied in order to derive analytic interrelations between physiological functions and to ascertain the most decisive factors limiting performance in the step test.

**A75-44191 Models of hearing** M R Schroeder (Göttingen, Universität, Göttingen, West Germany, Bell Telephone Laboratories, Inc, Murray Hill, NJ) *IEEE Proceedings*, vol 63, Sept 1975, p 1332-1350 81 refs

Current and past models of human hearing are discussed. The bases of the approaches range from head diffraction and inner-ear mechanics to neural transduction and processing, they touch on physical and physiological measurement, as well as the psycho-acoustic study of auditory perception. Historical antecedents dating back to Lucretius and progressing through Tartini, Ohm, Seebach, and Helmholtz, the anatomy and basic capabilities of the ear,

including the pinnae and the outer ear canal, the perception of three-dimensionality, the middle ear, and the inner ear, a two-dimensional model of the basilar membrane, long- and short-wave models of the auditory process (e.g., an electrical analog model), nonlinear models of inner-ear mechanics dealing with combination tones, nonlinear losses, and two-tone suppression, mechanical-neural transduction (including nervous firing in the inner ear, a sparse model for the transduction, and RC-circuit representation of the neural transduction model), and monaural phase sensitivity as conceived in the envelope hypothesis are considered

**A75-44212** A family of models for measuring human reliability A I Siegel, J J Wolf, and M R Lautman (Applied Psychological Services, Inc., Wayne, Pa.) In *Annual Reliability and Maintainability Symposium, Washington, D C, January 28-30, 1975, Proceedings* New York, Institute of Electrical and Electronics Engineers, Inc., 1975, p 110-115 Navy-USAF-Army-supported research

A set of stochastic, digital simulation models for simulating the performance of the human component in man-machine systems is described. The models emphasize human behavioral variables along with equipment, environmental, and crew composition considerations. Emphasis is placed on (1) unique advances which permit simultaneous computer and physical simulation, and (2) integrated man-machine system reliability predictions. One of the models (Model VIII) is held to be of special interest because of its capability to consider both equipment and human performance so as to yield a prediction of integrated system reliability

**A75-44269** # Techniques for avoiding biological contamination of the outer planets by atmospheric probes R E DeFrees, J W Lanham, and W R McNeilly (McDonnell Douglas Astronautics Co., St. Louis, Mo.) *American Institute of Aeronautics and Astronautics and American Geophysical Union, Conference on the Exploration of the Outer Planets, St. Louis, Mo., Sept 17-19, 1975, AIAA Paper 75-1164* 4 p

Contamination probabilities are qualitatively determined, considering planetary inhospitality, structural integrity, space-life incompatibility, clean fabricability, and fortuitous and undesirable events. Microbes are more likely to lodge on internal or mating surfaces than on external surfaces, they are even more difficult to kill and monitor when they establish themselves in the materials that make up the instruments and support equipment. The most influential factor on overall probability is the specified growth and replication probability value, which is about one-millionth. It is concluded that the schedule and cost increments for planetary quarantine of the outer planets are smaller than those required for Mars Viking procedures

**A75-44323** The man-machine interface M A Hofmann (U S Army, Aeromedical Research Laboratory, Fort Rucker, Ala.) *Vertiflite*, vol 21, May-June 1975, p 2, 3

The human role in aircraft safety and performance is evaluated, especially as regards rotary-wing craft. It is emphasized that the cost of replacing the human component of the man-machine system can often be larger than the cost of replacing the hardware component. Cockpit environment (temperature, noise, vibration, visual input requirements, workspace, gaseous environment, life-support equipment, and crash survivability), displayed information, and operator-input control devices (manipulanda) are the three man-machine interface areas of major concern

**A75-44351** Human assay of antinotion sickness drugs. A Graybiel, C D. Wood, J Knepton, J P Hoche, and G F Perkins (U S Navy, Naval Aerospace Medical Research Laboratory, Pensacola, Fla., Louisiana State University, Shreveport, La., Columbia-Presbyterian Hospital, Ridgewood, N J) *Aviation, Space, and Environmental Medicine*, vol 46, Sept. 1975, p 1107-1118 13 refs. Navy Project MF51,524-005.

The present study was undertaken to improve previous testing procedures, involving the use of a slow rotation room, for assessing the efficacy of antinotion sickness drugs which had validity for groups of subjects but not for each individual in the groups. The cardinal findings can be briefly summarized: (1) group responses were similar to the data previously reported, (2) large individual variation in response to antinotion sickness drugs was revealed, implying that individual assessments must be made for maximal benefits, (3) the fixed-dose combination of promethazine hydrochloride and ephedrine sulfate (25 mg each) proved to be outstanding, as this combination of homeric drugs clearly exhibited a suprasummation effect, and (4) a few tests were conducted using larger than usual doses and the results supported previous findings that, for a maximal beneficial effect in response to a single dose, individuals may vary both with regard to the choice of drug and the amount administered

**A75-44352** Quantitative cyto- and histochemical studies of the Deiters' nucleus and nodular cortex of cerebellum in rats exposed to weightlessness I B Krasnov (Institute of Biomedical Problems, Moscow, USSR) *Aviation, Space, and Environmental Medicine*, vol 46, Sept 1975, p 1119-1122 18 refs

Spaceflight aboard the 'Cosmos-605' artificial satellite during 22 d does not have a substantial effect upon the activity of enzymes involved in energy metabolism - lactate dehydrogenase and creatine kinase - in cytoplasm of the giant neurons of the dorsocaudal part of the Deiters' nucleus and cortex layers of the cerebellar nodulus in rats. At the same time, on the second postflight day, in the molecular layer of cerebellar nodulus in rats flown for 22 d in space, some increase in lipid content was noted, probably connected with quantitative or qualitative changes in afferent impulses from the vestibular apparatus to the nodulus. On the 27th postflight day, lipid content in the molecular layer returned to the level observed in rats during ground-based experiments

**A75-44353** Ethanol-induced lowering of arterial oxygen saturation during hypoxia J E Hansen and J R Claybaugh (U S Army, Tripler Army Medical Center, Honolulu, Hawaii) *Aviation, Space, and Environmental Medicine*, vol 46, Sept 1975, p 1123-1127 37 refs

Nine fasting, healthy, adult male volunteers were given oral carbohydrate before exposures to normoxia (inhaled partial O<sub>2</sub> pressure = 149 torr) and mild hypoxia (inhaled partial O<sub>2</sub> pressure = 98 torr). Following recovery, they were given oral ethanol before similar exposure to normoxia and mild hypoxia. Repeated measures of arterial blood and expired gases were made. Ethanol diminished respiratory gas exchange (R), causing lower alveolar and arterial oxygen pressures during normoxia and mild hypoxia and a reduction in arterial oxygen saturation from 89.9 to 87.4% during mild hypoxia. It is suggested that carbohydrates are preferable to ethanol and fats as nutrients during limited oxygen transport situations, such as high-altitude, carbon monoxide exposure, or heavy exertion, and for patients with cardiovascular or pulmonary disease

**A75-44354** Infrasound - A short review of effects on man J B Westin (Tel Hashomer Hospital, Israel) *Aviation, Space, and Environmental Medicine*, vol 46, Sept 1975, p 1135-1140 50 refs

The amount of natural and man-made infrasound that man is subjected to is larger than is generally realized. The few studies that have concerned themselves uniquely with the physiologic effects of moderate-to-high levels of infrasound exposure (as opposed to audible sound or vibrational exposures) have failed to demonstrate significant effects on man other than those concerning the inner ear

and balance control. But the existing studies indicate that inner ear symptomatology due to moderate-to-high levels of infrasound may be more common than is generally appreciated. At very high sound pressure levels (exceeding 140 dB), ear pain and pressure become the limiting factors. Ear muffs and ear plugs appear to offer slight protection from the effects of infrasound, but quantification of this is still lacking. Direct evidence of adverse effects of exposure to low-intensity signals (below 90 dB) is lacking. The need for further research in this field is clearly indicated. (Author)

**A75-44356 \*** Hematologic changes in mice during and after exposure to severe hypobaric hypoxia J E Huff (Oak Ridge National Laboratory, Oak Ridge, Tenn), G E Kaufman (Rochester, University, Rochester, N Y), and M Ingram (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif) *Aviation, Space, and Environmental Medicine*, vol 46, Sept 1975, p 1147-1151 30 refs ERDA-supported research

Exposing mice to an atmospheric pressure of 300 mm Hg for 16 d caused a variety of hematologic effects. Hematocrit increased rapidly in the first 8 d of exposure and slowly in the second 8 d. Reticulocyte counts rose above normal, peaked on day 8, and then fell rapidly toward the control level. Macrocytic erythrocytes, formed during exposure, remained macrocytic after the termination of exposure and after the loss of their reticulum. The posthypoxic mice proved sensitive for erythropoietin bioassay. Mice injected with normal dog serum showed a significantly higher incorporation of Fe-59 than control mice injected with physiologic saline. A reduction of the duration of exposure to 10 d resulted in only a slight decrease in the sensitivity of the mouse bioassay system. However, a 16-d exposure at a pressure of 360 mm Hg resulted in considerably less sensitive bioassay animals. (Author)

**A75-44358** Sensitivity of GABA synthesis in human brain to oxygen poisoning. J D Wood, S J Peesker, and B Rozdilsky (Saskatchewan, University, Saskatoon, Canada) *Aviation, Space, and Environmental Medicine*, vol 46, Sept 1975, p 1155, 1156 12 refs Research supported by the Defence Research Board of Canada

Homogenates were prepared from the basal ganglia and frontal cortex of human brain and incubated for 20 min at 25°C under either 1 ATA N2 or 3 ATA O2 (OHP). Exposure of the homogenates to OHP caused a significant inhibition in the activity of the gamma-aminobutyric acid (GABA) synthesizing enzyme, glutamic acid decarboxylase. This finding, together with previously published data on animal experiments, suggests that a deranged GABA metabolism must be given serious consideration as a possible mechanism for OHP-induced seizures in man. (Author)

**A75-44359** Effects in rodents of a 1-month exposure to magnetic fields /200-1200 gauss/ G G Nahas, H Boccalon, P Berryer, and B Wagner (Columbia University, New York, N Y, Institut National de la Sante et de la Recherche Medicale, Paris, France) *Aviation, Space, and Environmental Medicine*, vol 46, Sept 1975, p 1161-1163 19 refs

Under the conditions of the present study, magnetic fields ranging from 200 to 1200 gauss strength have no toxic or histopathological effects on rats. The *in vivo* study and the histopathological results show no alterations of the vascular tissues, except for a nonpathological congestion of the spleen, and no intravascular thrombosis related to the experimental conditions. An unexpected observation was that the increase in body and organ weight of young rats was significantly greater in the groups exposed to magnetic fields. Therefore, no undesirable effects should be

expected when magnetic fields within the prescribed safety limits of 200 to 2000 gauss are applied to human subjects for several hours. (Author)

**A75-44360 \*** Cardiorespiratory responses to orthostasis and the effects of propranolol J A Loepky (Lovelace Foundation for Medical Education and Research, Albuquerque, N Mex) *Aviation, Space, and Environmental Medicine*, vol 46, Sept 1975, p 1164-1169 25 refs Contract No NAS9-12572

Cardiac output and gas exchange were determined serially using the single-breath method of Kim et al before, during, and after orthostasis on six subjects after beta-adrenergic blockade and in duplicate controls. In the latter, heart rate increased and pulse pressure dropped immediately on tilting to 60 deg and remained stable while cardiac output and stroke volume declined gradually over 21 min upright. On propranolol, heart rate was 10 bpm lower supine and 20 bpm less at 60 deg but cardiac output was only slightly lower before and following tilt-up. However, after 15 min upright, stroke volume and cardiac output recovered on propranolol exceeding the controls after 21 min without change in heart rate. Returning to supine, heart rate dropped in all tests with a transitory increase in stroke volume, cardiac output and arteriovenous O2 difference. At the same time, apparent O2 uptake increased temporarily, reflecting the return of pooled venous blood to the lungs. Orthostatic tolerance did not appear to be affected by beta-adrenergic blockade. **A75-44361** Cosmic radiation exposure in supersonic and subsonic flight *Aviation, Space, and Environmental Medicine*, vol 46, Sept 1975, p 1170-1185 10 refs

The main body of this document consists of four major sections: (1) an introduction describing the scope of Committee operations and proving a brief exposition of the concepts of radiation protection, (2) a survey of experimental and theoretical data on cosmic radiations that have been obtained in individual research projects with emphasis on investigations that were performed under the sponsorship of the Committee. The studies evaluate galactic and solar radiation as a function of altitude and magnetic latitude, (3) best current estimates of cosmic radiation levels in the atmosphere, and (4) radiation protection recommendations dealing with maximum permissible doses and operational aspects covering satellite warning systems, on-board instrumentation, and forecasting. Nine annexes submitted by individual authors cover various of these subjects in greater detail. (Author)

**A75-44362** Central nervous system involvement following type I aviator's bends complicated by complacency F E Dally, Jr (US Naval Aerospace Medical Center, Aerospace Medical Institute, Pensacola, Fla) *Aviation, Space, and Environmental Medicine*, vol 46, Sept 1975, p 1186, 1187 8 refs

A false sense of security surrounds the possibility of postflight complications resulting from 'aviator's bends.' The accepted clinical clue that a patient is at risk for serious complications is the presence of some form of dysbarism at altitude. This principle has been inappropriately extended to imply that serious postflight complications of the evolved gas syndrome only follow serious in-flight symptoms. This paper, in addition to reporting the occurrence of postflight neurologic signs in a patient after Type I pain-only bends during an altitude chamber flight, also identifies a broader subtle complacency in the professional community that routinely deals with hypobars. **A75-44512 #** New methods and test batteries for the psychological selection of aircrew (Novye metody i kompleksy testov psichologicheskogo otbora letnogo sostava) B L Pokrovskii *Voenno-Meditsinskii Zhurnal*, June 1975, p 58-60 In Russian

Numerous investigational efforts are presently directed toward refining existing psychological tests of aircrew candidates, taking into account changes in pilot activity due to the advent of automatic control systems. In this respect, the requirements for intellectual and perceptual spheres of activity are increased, whereas the demands for sensorimotor qualities are decreased. Previous psychological tests are being superseded by prognostic test batteries which help determine the characteristics of a testee's higher nervous activity, which are indispensable both in acquiring initial flight skills and in conversion training on other types of aircraft. A computer-aided automatic laboratory for psychophysiological evaluation of candidate pilots is described. Adapted personality questionnaires are recommended for practical approval

**A75-44618** Effect of inspiratory resistance on occlusion pressure in hypoxia and hypercapnia M H Kryger, O Yacoub, and N. R Anthonisen (Royal Victoria Hospital, McGill University, Montreal, Canada) *Respiration Physiology*, vol 24, Sept 1975, p 241-248 9 refs Research supported by the Medical Research Council and Defence Research Board of Canada

The authors measured ventilation and the mouth pressure developed during the first 0.1 sec of inspiratory effort against a closed airway (PO1) in response to normoxic hypercapnia and normocapnic hypoxia, with and without added inspiratory resistance. Hypercapnic responses were elicited by a steady-state technique, hypoxic responses by a nonsteady-state technique. External resistances depressed the ventilatory response to CO<sub>2</sub> but in general augmented the PO1 response. The degree of change of response was not predictable on the basis of the response in the absence of resistance. Hypoxic ventilatory response was also diminished by resistance and PO1 increased. The authors concluded that in normal subjects added inspiratory resistance increased inspiratory drive as assessed by PO1

**A75-44619** Stimulus interaction in the responses of carotid body chemoreceptor single afferent fibers S Lahiri and R G DeLaney (Pennsylvania, University, Philadelphia, Pa) *Respiration Physiology*, vol 24, Sept 1975, p 249-266 36 refs Grant No PHS-HL-08805

The characteristics of steady-state responses of single afferent fibers of carotid chemoreceptors to independent changes in arterial PO<sub>2</sub> and PCO<sub>2</sub> were investigated in cats. The arterial blood pressure was maintained within the normal limits (115-130 torr). Single chemoreceptor afferent fibers responded to changes both in arterial PO<sub>2</sub> and PCO<sub>2</sub>. The relationship between the activity of chemoreceptors and changes in arterial PCO<sub>2</sub> was linear at a constant arterial PO<sub>2</sub>. The two stimuli showed multiplicative interaction. The activity approached zero (threshold) as arterial PCO<sub>2</sub> was decreased at a constant arterial PO<sub>2</sub>, a decrease in arterial PO<sub>2</sub> decreased the arterial PCO<sub>2</sub> threshold. These response characteristics of a single fiber suggest that the sensory receptor may be activated through a single mechanism by the two stimuli. The data fit into an idea that the mechanism may involve a conformational change in the membrane-bound polymeric chromophore group which reacts with O<sub>2</sub> reversibly and shows a Bohr-shift  
(Author)

**A75-44620** Relationship between carotid chemoreceptor activity and ventilation in the cat S Lahiri and R G DeLaney (Pennsylvania, University, Philadelphia, Pa) *Respiration Physiology*, vol 24, Sept 1975, p 267-286 32 refs Grant No PHS-HL-08805

The steady-state stimulus-response relations between arterial PO<sub>2</sub> and PCO<sub>2</sub> and the mean activity of carotid chemoreceptors (single and multi-fiber) and ventilation were simultaneously recorded in 48 anesthetized cats. The carotid chemoreceptor activity varied linearly with the increase of arterial PCO<sub>2</sub>, below and above the normal value, at any given level of arterial PO<sub>2</sub>. A decrease in arterial PO<sub>2</sub> increased the activity of the carotid chemoreceptors and increased its sensitivity to changes in arterial PCO<sub>2</sub>, showing multiplicative stimulus interaction. The response in ventilation during hypoxia to changes in arterial PCO<sub>2</sub> below the normal value was smaller than that to changes above it, unlike the response of carotid chemoreceptors. This arterial PCO<sub>2</sub> quasi-threshold for ventilation was, therefore, not due to a corresponding threshold for the activity of the carotid chemoreceptors but to a central mechanism. A multiplicative interaction between the activity of peripheral chemoreceptors and central CO<sub>2</sub> excitation appears to play a role in the regulation of ventilation

**A75-44650** Invariant properties of the motion parallax field due to the movement of rigid bodies relative to an observer J J Koenderink and A J van Doorn (Utrecht, Rijksuniversiteit, Utrecht, Netherlands) *Optica Acta*, vol 22, Sept 1975, p 773-791 12 refs

It is shown that the time-change of the natural perspective, due to the movement of rigid bodies relative to an observer, conveys

information about geometrical properties of the moving surfaces. Certain differential properties of the dynamic perspective are shown to be conserved. These properties are related to determinants of the shape of the surface elements of the moving bodies, as for instance the sign of the gaussian curvature, the asymptotic curves and the future contours. A kinematic analysis of the motion parallax field shows that the type of parallax field is related to the slant of the surface relative to the observer. The theory is of possible significance to visual kinesthesia. (Author)

**A75-45054 # Concept of algorithmic control for a class of large systems (Poniatie algoritmicheskogo upravleniya dla odnogo klassa bol'shikh sistem)** M Vukobratovic *Avtomatika i Telemekhanika*, July 1975, p 83-100 14 refs In Russian Research supported by the Matematichki Institut of Belgrade

An engineering approach to the synthesis of control mechanisms for a wide class of large systems is formalized. The approach is based on a preliminary determination of the nominal operational modes, the hierarchical structure consists of a nominal dynamics level (algorithmic level) and an adaptation level (level of disturbed modes). Using this approach, a case of large disturbances can be reduced to a case of small disturbances, i.e., to a linear control problem. V P

**A75-45071 # Effect of thymus extract on granulocyte content in the peripheral blood (Vliyanie ekstrakta timusa na soderzhanie granulotsitov v perifericheskoi krovi)** T V Todriia (Akademia Nauk Gruzinskoi SSR, Institut Eksperimental'noi Morfologii, Tiflis, Georgian SSR) *Akademia Nauk Gruzinskoi SSR, Soobshcheniya*, vol 79, July 1975, p 205-208 14 refs In Russian

The influence of a single administration of 0.3 and 0.6 ml of thymus extract on *in vivo* granulopoiesis in the peripheral blood of young and old male albino rats is studied. It is shown that thymus extracts affects not only the lymphoid system but also myeloid elements. In particular, thymus extract causes a marked increase in the number of segmented nuclear neutrophils in the peripheral blood of young rats, whereas old rats are characterized by enhancement of lymphocytes in the peripheral blood with inhibition of transfer of the remaining forms of leukocytes into the blood. **A75-45123 Ability of man to detect increases in his breathing** D W M West, C G Ellis, and E J M Campbell (St Joseph's Hospital, McMaster University, Hamilton, Ontario, Canada) *Journal of Applied Physiology*, vol 39, Sept 1975, p 372-376 8 refs

The ability of four normal subjects to detect increases in their ventilation was studied at rest and at two levels of exercise using a raised inspired PCO<sub>2</sub> to further increase ventilation. Subjects signaled when the increase in ventilation was recognized. The average tidal volume at rest was 520 ml with a frequency of 14, these values increased to an average of 3300 ml and 21 at the highest work load. There was no significant change in frequency with CO<sub>2</sub>. Detection occurred when the tidal volume increased by 700 ml. The appreciation of increase is proportionately more sensitive at higher levels of ventilation. Experiments in which the ventilation was increased by hypoxia or by following a visual demand, and observations of other sensations (oral, cerebral) indicate that the increase in ventilation is recognized through increased breathing rather than awareness of ventilatory stimuli. **A75-45125 \* A new gas lesion syndrome in man, induced by 'isobaric gas counterdiffusion'** C J Lambertsen and J Idicula (Pennsylvania, University, Philadelphia, Pa) *Journal of Applied Physiology*, vol 39, Sept 1975, p 434-443 30 refs Grants No NIH-HL-08899-11, No NSG-9011, Contract No N00014-67-A-0216-0026

Normal men have been found to develop pruritis and gas bubble lesions in the skin, and disruption of vestibular function, when breathing nitrogen or neon with oxygen while surrounded by helium at increased ambient pressure. This phenomenon, which occurs at stable ambient pressures, at 1 or many ATA, has been designated the isobaric gas counterdiffusion syndrome. In a series of analyses and experiments *in vivo* and *in vitro* the cause of the syndrome has been established as due to gas accumulation and development of gas bubbles in tissues as a result of differences in selective diffusivities, for various respired and ambient gases, in the tissue substances between capillary blood and the surrounding atmosphere. The phenomenon described in man is an initial stage of a process shown later in animals to progress to continuous, massive, lethal, intra-vascular gas embolization. (Author)

**A75-45126 Ventricular function following acute carbon monoxide exposure** S H Cramlet, H H Erickson, and H A Gorman (USAF, School of Aerospace Medicine, Brooks AFB, Tex, Colorado State University, Fort Collins, Colo) *Journal of Applied Physiology*, vol 39, Sept 1975, p 482-486 23 refs

Cardiac output function curves were used to investigate the effects of carbon monoxide on the heart in the conscious dog. Each dog was briefly exposed to 1500 ppm carbon monoxide through a permanent tracheostomy. Immediately upon attaining either 10%, 20%, or 30% HbCO a rapid infusion of Ringer's lactate was given to test cardiac capabilities. The combined effects of carbon monoxide and infusion produced significant increases in cardiac output, heart rate, mean left ventricular pressure, peak rate of rise in left ventricular pressure and ratio of peak rate of rise in left ventricular pressure to instantaneous left ventricular pressure. Cardiac output was sufficient to prevent peripheral hypoxia at all HbCO levels, however, there was evidence of impending cardiac depression beginning at 20% HbCO. (Author)

**A75-45127 \* Use of dew-point detection for quantitative measurement of sweating rate** G L Brengelmann, M McKeag, and L B Rowell (Washington, University, Seattle, Wash) *Journal of Applied Physiology*, vol 39, Sept 1975, p 498-500 9 refs Grants No NIH-HL-16910, No NIH-HL-09773, No NIH-RR-37, No NGR-48-002-082

A method of measuring sweat rate (SR) based on detection of dew point (DP) is proposed which has advantages that may be attractive to other laboratories concerned with recording SR from selected areas of skin. It is similar to other methods in that dry gas is passed through a capsule which isolates several square centimeters of skin surface. The difference is in the means of determining how much gaseous water is carried off in the effluent moist gas. The DP detector used is free of the drawbacks of previous devices. DP is obtained through the fundamental technique of determining the temperature at which condensate forms on a mirror. Variations in DP are tracked rapidly, and accurately (+ or - 0.8 C nominal, sensitivity + or - 0.05 C) over a wide range (-40 C to +50 C) without measurable hysteresis. The detector assembly is rugged and readily opened for cleaning and inspection. (Author)

The biological effects of electrical and electromagnetic fields on man were investigated. Parameters considered include reaction time, blood pressure, pulse, ECG, EEG, blood count, thrombocytes, reticulocytes, clotting time and sedimentation rate. Test results show that under the experimental conditions of a 50 Hz alternating field no harmful effects were noted. Apart from slight non-specific stimulation phenomena in the physiological range, no pathological changes were observed which could be attributed to the influence of the field. Both male and female subjects were studied.

A detailed introduction is given providing the geographical, geological and ecological characterization of a site chosen in Bohemia. The main body of this article deals with the morphology and taxonomy of several fungi of the Hygrophoraceae family found in the given locale. The author gives very full descriptive data on several species of Hygrophoraceae (i.e., Hygrophorus Camarophyllus, Camarophyllopsis, Godfrinia, Neohygrocybe, Hygrocybe and Gliophorus). He also proposes a new systematic classification of the sections and subsections of Godfrinia R. Maire, Neohygrocybe (gen. nov.), Hygrocybe (Fr.) P. Karst., and Gliophorus (gen. nov.)

The study reported here was designed with two objectives. The first objective was to determine whether or not photopigments may be involved in the production of nonthermal lesions and the second objective was to extend argon ED50 measurements for nonthermal lesions to 1000-sec exposures. To accomplish the first objective exposures were made for 120 seconds using a wavelength of 1060 nm. This wavelength when absorbed at the retina can produce a temperature rise but is inefficient in bleaching photopigments. Thus lesions produced by these exposures should stem primarily from thermal changes. The results of these exposures were then compared to those obtained from exposure to a wavelength of 514.5 nm which readily interacts with photopigments

Different approaches to the problem of training pilots to cope with spatial disorientation are analyzed with emphasis on those approaches using hardware (antivertigo trainers) specifically designed for such training. Antivertigo trainers are categorized according to function i.e., as (1) demonstrators of vestibular

and visual illusions (2) demonstrators of spatial disorientation or (3) trainers to eliminate through practice erroneous responses to disorienting stimuli. Simple control-system diagrams of various antivertigo trainers illustrate the critical concepts of identification of the controlled parameter degree of motion-control-loop closure, cross-sensory-modality coupling and relevance of vestibular stimulation to the control problem. Opinions regarding probabilities of transfer of the various types of ground-based training to inflight situations are discussed

(Grant NGR-22-009-733)

(NASA-CR-137734) Avail NTIS HC \$8 75 CSCL 05J

Psychophysical models for the behavior of the human operator in detection tasks which include change in detectability correlation between observations and deferred decisions are developed. Classical Signal Detection Theory (SDT) is discussed and its emphasis on the sensory processes is contrasted to decision strategies. The analysis of decision strategies utilizes detection tasks with time varying signal strength. The classical theory is modified to include such tasks and several optimal decision strategies are explored. Two methods of classifying strategies are suggested. The first method is similar to the analysis of ROC curves while the second is based on the relation between the criterion level (CL) and the detectability. Experiments to verify the analysis of tasks with changes of signal strength are designed. The results show that subjects are aware of changes in detectability and tend to use strategies that involve changes in the CLs

The NOAA OPS project developed excursion procedures for shallow nitrogen habitats. Operational verification of the concept was carried out in two laboratory saturation dives using three subjects each. Cognitive and psychomotor performance was evaluated on the subjects under several conditions at sea level, during normoxic nitrogen saturation exposures of seven-day duration each at pressures equivalent to 30, 60, 90 and 120 feet of sea water (fsw) on compressed air excursions from saturation to depths as great as 300 fsw, and on equivalent air dives as made from the surface in the unsaturated condition. Results indicated that divers can live and work in normoxic nitrogen habitats--to depths as great as 120 fsw for at least one week duration--at performance levels comparable to sea level efficiency. Raymond H Faergeb, Jr Dec 1974 93 p refs  
(AD-A008707 GE/EE/74-42) Avail NTIS CSCL 05/8

A technique is developed which can be used to identify the

$j$ -dimensional hypersurface of a multimodal human operator model. The  $j$  is equivalent to the number of system parameters plus one for the parameters performance. The technique uses a bounded random search to select the parameters which are used to calculate an output from the model. Parameters which produce an output that meets the performance criterion are stored then they are used as an input to a clustering algorithm. The clustering algorithm produces clusters or groupings of parameters which identify the model's hypersurface from which local maximums can be determined using existing techniques such as Newton-Raphson or gradient search. The local maximum with the best performance is considered the global maximum and the parameters associated with the global maximum are referred to as the optimal set of system parameters. One use of this technique is parameter tracking such as is required in human operator modeling over long periods of time or under changing tasks. GRA

(NASA-CR-143420) Avail NTIS HC \$3 25 CSCL 05H

A hand/touch sensing system is described that when mounted on a position-controlled manipulator greatly expands the kinds of automated manipulation tasks that can be undertaken. Because of the variety of coordinate conversions control equations and completion criteria control is necessarily dependent upon a small digital computer. The sensing system is designed both to be rugged and to sense the necessary touch and force information required to execute a wide range of manipulation tasks. The system consists of a six-axis wrist sensor, external touch sensors, and a pair of matrix jaw sensors. Details of the construction of the particular sensors, the integration of the end effector into the sensor system and the control algorithms for using the sensor outputs to perform manipulation tasks automatically are discussed

The enzyme polyphosphate-synthetase, isolated from the crushing of cells with low phosphate concentrations, was found

capable of catalyzing the synthesis of polyphosphates from the orthophosphate. The enzyme is localized in the sedimentary membranous fraction obtained between 400 and 1000 g. Its optimal pH level is 7.1, its Km vis-a-vis the orthophosphate is 4.0 x 10<sup>-4</sup> M. ATP stimulates the reaction. This enzyme synthesizes primarily short chain polyphosphates

**PHYTOPLANKTON POPULATIONS IN RELATION TO DIFFERENT TROPHIC LEVELS AT WINNIPESAUKEE LAKE, NEW HAMPSHIRE, USA**

Harry William Yeo and Arthur C Mathieson Feb 1973 161 p refs (PB-240981/1, W75-06354) Avail NTIS HC \$6 25 CSCL 06F

Composition, abundance and seasonal periodicity of phytoplankton at Lake Winnipesaukee were determined. Trophic levels were evaluated for the entire lake and for eight individual stations. The trophic levels of Lake Winnipesaukee were compared with Newfound and Winnisquam Lakes. The response of phytoplankton to nutrient enrichments of nitrates, phosphates and silicates was evaluated. The differences in phytoplankton numbers (cell/ml) and nutrient levels were compared with previous records at Winnisquam and Newfound Lakes. The nutrient levels at Winnipesaukee were in excess of those previously found at Newfound and Winnisquam Lakes. The species diversity at Winnipesaukee Lake was much greater than at either of the other two lakes

Ray R Lassiter May 1975 62 p refs (PB-241987/7 EPA-660/3-75-012) Avail NTIS HC \$4 25 CSCL 06F

To provide capability to model aquatic ecosystems or their subsystems as needed for particular research goals, a modeling strategy was developed. Submodels of several processes common to aquatic ecosystems were developed or adapted from previously existing ones. Submodels are included for photosynthesis as a function of light and depth, biological growth rates as a function of temperature, dynamic chemical equilibrium, feeding and growth and various types of losses to biological populations. These submodels may be used as modules in the construction of models of subsystems of ecosystems. A preliminary model for the nitrogen cycle subsystem was developed using the modeling strategy and applicable submodels

Martin C Moore Eds 30 Jun 1975 173 p ref

(Contract NAS-14249)

(NASA-CR-144413) Avail NTIS HC \$6.25 CSCL 06P

The mechanisms that underlie the circadian variations in electrolyte content in body fluid compartments were investigated, and the mechanisms that control the oscillations were studied in order to investigate what effects internal desynchronization in such a system would have during manned space flight. The studies were performed using volunteer human subjects and squirrel monkeys. The intercompartmental distribution of potassium was examined when dietary intake, activity and posture are held constant throughout each 24-hour day. A net flux of potassium was observed out of the body cell mass during the day and a reverse flux from the extracellular fluid into the body cell mass during the night, counterbalanced by changes in urinary potassium excretion. Experiments with monkeys provided evidence for the synchronization of renal potassium excretion by the rhythm of cortisol secretion with the light-dark cycle. Three models of the circadian timing system were formalized

**EFFECTS OF HIGH TEMPERATURE ON MAINTENANCE PERFORMANCE** Final Report

Denis M Balint Mar 1975 45 p refs

(AD-A009295 USAMC-ITC-02-08-75-108) Avail NTIS CSCL 06/19

The objective of the research was to determine whether or not there is a decrease in the efficiency of maintenance performance when conducted under heat stress conditions which

is detectable prior to the occurrence of visible physical deterioration. Two groups of 10 male subjects were exposed to either a comfortable (72F dry-bulb) or a high temperature (110F dry-bulb) environment. The time to complete a basic electronic maintenance task by each subject was measured and the mean task completion time of each experimental group was calculated for use in the statistical comparison. Experimental results indicate a statistically significant decrease in maintenance performance efficiency because of the increase in temperature. GRA

Results are given of the effectiveness of a lead shielding belt in reducing the gamma dose to the center of a cylindrical tissue-equivalent phantom exposed to isotropic gamma radiation. Three different shield designs were used. The first was a lead belt 20-cm high (wide) of a thickness varying from 0.0 cm (no belt) to 5.08 cm. The second design belt was 30-cm high (wide) of thickness varying from 0.0 cm (no belt) to 5.08 cm. For the third case, the 20-cm high (wide) lead belt of a thickness varying from 0.0 cm (no belt) to 5.08 cm was used but with a lead seat and back. The results demonstrate the feasibility of using a lead belt to reduce the gamma tissue dose to a tissue-equivalent phantom from an isotropic gamma source. GRA

**HUMAN BIOASSAY OF ANTIMOTION SICKNESS DRUGS**

Ashton Graybiel, Charles D Wood, James Knepton, John P Hoche and Gene F Perkins 2 Apr 1975 28 p refs

(MF51524005)

(AD-A009799 NAMRL-1215) Avail NTIS CSCL 06/15

Great individual differences in response to antimotion sickness drugs administered in usual doses were revealed. In one experiment (involving 11 subjects and 7 drugs) the single best therapeutic response implicated all seven drugs tested (three single drugs and four fixed-dose combinations). In terms of percentage of subjects demonstrating a substantial beneficial antimotion sickness drug effect, administration of a fixed-dose combination of promethazine hydrochloride and ephedrine sulfate (25 mg each) proved to be outstanding. This combination of homogenic drugs clearly exhibited a suprasummation effect. A few tests were conducted using larger than usual doses and the results support previous findings that for a maximal beneficial effect in response to a single dose, individuals may vary both with regard to the choice of drug and the amount administered. **FREQUENCY RESPONSE OF THE OCULOVESTIBULAR SYSTEM DURING YAW OSCILLATION**

W Carroll Hixson 8 Dec 1974 32 p refs

(MF51524005)

(AD-A009769 NAMRL-1212) Avail NTIS CSCL 06/19

The report describes the results of a system transfer function

type study of the oculovestibular response to sinusoidal yaw angular oscillations of the head. Ten naval aviator candidates were exposed to earth-vertical rotation about the z head axis at nine different octave-separated stimulus frequencies covering the 0.005 to 1.28 Hz spectrum with peak velocity of the stimulus held constant at 50 deg/sec. The frequency dependence of the oculovestibular system was interpreted in terms of phase and amplitude measures of the slow component eye velocity element of the resulting horizontal nystagmus. Though the phase data collected at the lower stimulus frequencies deviated somewhat from those predicted by the conventional second-order model of cupula-endolymph response a theoretical account for the deviation was postulated by introducing an adaptation transfer function as developed by other investigators

**CONSPICUITY OF TARGET LIGHTS THE INFLUENCE OF FLASH RATE AND BRIGHTNESS**

Mary M Connors Washington Sep 1975 17 p refs (NASA-TN-D-7961 A-5792) Avail NTIS HC \$3 25 CSCL 05E

The stimulus characteristics of lights that might aid a pilot to see and avoid by alerting him to a potential threat were studied. The relative conspicuity of foveally equated, point-source, steady and flashing lights of several brightnesses, seen against a star background was examined. From the subject's viewpoint,

these target lights could appear anywhere within a large (40 deg horizontal by 35 deg vertical) field of view. The lights appeared at random time intervals while the subject was periodically distracted by a simulated cockpit task. The results indicate that correct target detection increases and reaction time decreases with increased target intensity. Steady lights are missed more frequently and acquired more slowly than flashing lights, but no significant differences are found among the wide range of flash rates employed. The intensity of the light has a greater effect on both detection and reaction time to steady lights than to flashing lights. These results are compared with results of other researchers who used targets which appeared at fixed locations. The longest reaction times were recorded to lights which appeared either at the extremes or at the very center of the visual field

**MODELING THE SATURATION LEVEL OF A HUMAN RADAR OPERATOR** M S Thesis

Dahl B Metters Dec 1974 101 p refs (AD-A009203 GE/EE/74-73) Avail NTIS CSCL 05/9

The United States Air Force is building a mathematical model of the air battle and needs, as an input, a model of the saturation level of the groundbased enemy radar operator. Saturation level can be loosely defined as the number of targets that the human operator can effectively manage. The concept of an ideal operator is introduced to allow the precise definition of saturation level. An ideal operator is defined as an operator who can perform a certain amount of work per unit time perfectly. The amount of work that the ideal operator can perform is termed the operator's saturation level. The human operator is then modeled as an ideal operator who makes random errors. The human operator's saturation level is then estimated from a series of measurements as a function of the human's maximum time-between-errors. An experiment which was conducted to measure saturation level is described in detail and the results are presented. The resulting data are then analyzed using the Kolmogorov-Smirnov and Likelihood Ratio tests. GRA

The present research was conducted to determine transfer of practice from a formation simulator to aircraft formation flying. Evidence in support of positive transfer was obtained by comparing students trained in the formation simulator with students who were essentially untrained and with students trained in the aircraft. This design provided data for a direct comparison with five simulator sorties with two aircraft sorties in an effort to quickly establish a training cost/transfer comparison. GRA

Overcrowded conditions unavoidable absence and the lack of standardization in a course can detract from the learning experience. In an attempt to solve these problems, fully automatic slide-tape programs have been developed for use in the gasdynamics laboratory course. In order to improve these lecture packages, the students have been asked to evaluate them. A significant portion of this research is devoted to the development of a detailed questionnaire to sample student reaction to the slide-tape lecture format. GRA

 (AD-A009159 AFOSR-75-0593TR) Avail NTIS

The conjecture was investigated that the intellective load carrying capability for selected intellective functions is identifiable and measurable. Intellective load carrying failure was defined as the point at which a change in transfer function components occurs as a tracking and a scaled intellective function were concomitantly performed. The scaled intellective functions were drawn from the Guilford Structure-of-Intellect model. The transfer function components included amplitude ratio and phase lag as defined by the frequency-response analytic method. GRA

 (NASA-CR-144435) Avail NTIS HC \$3 25 CSCL 06K

The work to correct several design deficiencies present in the bearings used in the orbital extravehicular spacesuit is reported. These deficiencies included difficult stitch-on interface between fabric and outer race, a tendency for the clamping threads to seize and most importantly the failure of the sealing surfaces (Teflon seat Delrin seal) to maintain integrity with cycling. The first problem was corrected by raising the stitch-on holes so as to be more accessible. The seizing was eliminated by changing to a coarser thread from 32/inch to 24/inch. The solution to the sealing problem required a materials evaluation candidate material selection and adhesive evaluation (for bonding the seat material to the outer race) and bench-cycling of candidate seal/seat combinations. The final configuration successfully bench-cycled and delivered to NASA is shown. Author

 (NASA-CR-144430) Avail NTIS HC \$3 75 CSCL 06B

A mechanical occlusive cuff controller suitable for blood flow experiments in space shuttle flights is described. The device requires 115 volt ac power and a pressurized gas source. Two occluding cuff pressures (30 and 50 mmHg) are selectable by a

switch on the front panel. A screw driver adjustment allows accurate cuff pressurization levels for under or oversized limbs. Two pressurization cycles (20 second and 2 minutes) can be selected by a front panel switch. Adjustment of the timing cycles is also available through the front panel. A pushbutton hand switch allows remote start of the cuff inflation cycle. A stop/reset switch permits early termination of the cycle and disabling of the controller to prevent inadvertent reactivation. Pressure in the cuff is monitored by a differential aneroid barometer. In addition, an electrocardiogram trigger circuit permits the initiation of the pressurization cycle by an externally supplied ECG signal. Author

ON DEVELOPMENT OF AN INEXPENSIVE, LIGHTWEIGHT  
THERMAL MICROMETEROID GARMENT FOR SPACE  
SUITS Final Report**

16 Jul 1975 156 p  
(Contract NAS9-14199)  
(NASA-CR-144428) Avail NTIS HC \$6 25 CSCL 06K

A lightweight and inexpensive coverlayer developed for space suits is described. Material selection, procurement and testing, pattern design and prototype fabrication are discussed. By using the minimum required cross section necessary for earth orbital mission by utilizing the lightest weight materials possible, and by decreasing the use of weight costly taping a lightweight and economical thermal micrometeoroid garment was developed. Simplification of manufacturing techniques and use of off-the-shelf materials helped to reduce costs. J M S

The results of a comprehensive study which defined an Extravehicular Life Support System Thermal Control System (TCS) are presented. The design of the prototype hardware and a detail summary of the prototype TCS fabrication and test effort are given. Several heat rejection subsystems, water management subsystems, humidity control subsystems, pressure control schemes and temperature control schemes were evaluated. Alternative integrated TCS systems were studied and an optimum system was selected based on quantitative weighing of weight, volume, cost, complexity and other factors. The selected subsystem contains a sublimator for heat rejection, bubble expansion tank for water management, a slurper and rotary separator for humidity control, and a pump, a temperature control valve, a gas separator and a vehicle umbilical connector for water transport. The prototype hardware complied with program objectives. Author

A Vapor Compression Distillation (VCD) module was developed and evaluated as part of a Space Station Prototype (SSP) environmental control and life support system. The VCD module includes the waste tankage, pumps, post-treatment cells, automatic controls and fault detection instrumentation. Development problems were encountered with two components: the liquid pumps, and the waste tank and quantity gauge. Peristaltic pumps were selected instead of gear pumps, and a sub-program of materials and design optimization was undertaken leading to a projected life greater than 10,000 hours of continuous operation. A bladder tank was designed and built to contain the waste liquids and deliver it to the processor. A detrimental pressure pattern imposed upon the bladder by a force-operated quantity gauge was corrected by rearranging the force application and design goals were achieved. System testing has demonstrated that all performance goals have been fulfilled. Author

A GRAPHICAL SUMMARY OF OXYGEN REGULATOR PERFORMANCE Interim Report, Apr - Sep 1974**

Paul J Zalesky and Ronald D Holden Apr 1975 30 p refs  
(AF Proj 7164)  
(AD-A009134 SAM-TR-75-12) Avail NTIS CSCL 14/2

The static performance characteristics of USAF oxygen regulators were evaluated utilizing the regulator test stand at USAFSAM. Outlet suction pressures, flows, positive pressures and delivered oxygen dilutions were observed and plotted as functions of operational altitudes. General findings indicated that (1) excessive oxygen addition occurs in all models especially at low cabin altitudes, (2) positive pressure schedules generally conform to specifications, (3) negative suction pressures for most regulators are less than -10 in H<sub>2</sub>O. The validity of static evaluation is discussed and data interpretation is considered with respect to biomedical compatibility that emphasizes maintenance of crewmember physiological sufficiency. GRA

**A STUDY OF PROPOSED EAR PROTECTION DEVICES FOR LOW FREQUENCY NOISE ATTENUATION Final Report**  
Patrick Michael Dallotta Apr 1975 143 p refs  
(AD-A009274 USAMC-ITC-02-08-75-004) Avail NTIS CSCL 06/17

The investigation was undertaken to evaluate several methods of ambient noise attenuation proposed by Columbia Broadcasting Systems and Bolt Beranek and Newman. It also explores the new developments in the area of active noise suppression. The end result of the attenuation method was the employment of the selected device in the SPH-4 helmet. Both companies proposed new models and suggestions for not only active, but also passive systems. The results of the study indicate that the best form of attenuation lies with the passive methods. **COMPUTER MODEL TO DETERMINE CENTER OF GRAVITY AND MOMENTS OF INERTIA FOR PROTECTIVE HELMETS Final Report**

Don Allan Slaymaker Apr 1975 55 p refs  
(AD-A009285 USAMC-ITC-02-08-75-001) Avail NTIS CSCL 06/17

The purpose of the study is to describe a computer model that will provide the parameters center of gravity, moments of inertia and perceived protective area for combat helmets. The model is intended to be a design tool for use in the development of new helmets. It will also provide data on helmets already in use. The helmet is approximated by a series of flat triangular plates. The above parameters for each triangular increment are available in geometry text books. The perceived area is the actual area of the triangle times the dot product of a unit vector normal to the flat plate. A hollow hemisphere is used to test the accuracy of the model. Model accuracy is proved to be quite good. GRA

**SYSTEM SAFETY EVALUATION OF LIFE SUPPORT SYSTEMS FOR CHEMICAL AND BIOLOGICAL PROTECTIVE SUITS** Final Report  
 Richard B Belmonte Apr 1975 84 p refs  
 (AD-A009312, USAMC-ITC-02-08-75-401) Avail NTIS CSCL 06/17

The paper presents a system safety analysis of two air supply sub-systems which are to be used with a chemical and biological protective suit system. The backpack assembly sub-system has been developed and tested already, whereas the remote air supply apparatus has not yet been developed. The system safety analysis of each air supply sub-system includes mission analysis, preliminary hazard analysis, failure mode and effect analysis, flow analysis and fault tree analysis. A reliability model and block diagram of each sub-system is also included. The results of these analyses indicate that with proper maintenance and trained personnel the safety provided by these sub-systems should be acceptable. GRA

Some fundamental problems involved in the exobiology (space biology) of the moon have been clarified through investigations of the moon and the materials of which it consists samples of which have been brought to the earth by automatic and manned space stations. These problems include the possible presence of lunar forms of life, the conditions for man's presence on the moon, the presence of organogenic (entering into the composition of living matter) chemical elements and their compounds and the search for some idea concerning the sources of carbon in lunar surface material. Numerous results obtained recently are generalized. Author

# SUBJECT INDEX

AEROSPACE MEDICINE AND BIOLOGY / A Continuing Bibliography (Suppl 148)

DECEMBER 1975

## Typical Subject Index Listing

The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content a title extension is added separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable a report number is also included as an aid in identifying the document.

Effect of 50-Hz fields on man [ELL-CE-TRANS-6689-(9022.09)] N75-30770

<b>BIOLOGICAL EVOLUTION</b>	
Nonlinear mathematical models for the origin of asymmetry in biological molecules	A75-43889
Primary catalytic systems of biogenesis and structure-functional evolution of biocatalysers	A75-43895
Speculations on the evolution of the genetic code	A75-43896
On the evolution of the photosynthetic pigments	A75-43898
On the origin of plastids --- chloroplast ribosome studies	A75-43899
Some considerations of the theoretical limits for living organisms	A75-44135
<b>BIOMEDICAL DATA</b>	
Research progress in radiobiology [AD-A009327]	N75-31723
<b>BIOMETRICS</b>	
Optimum uses of psychobiological, sensorimotor, and performance measurement strategies --- for industrial safety	A75-43844
Biological individuality of man [AD-A008888]	N75-30782
<b>BIOSYNTHESIS</b>	
Adaptation of brain monoamine synthesis to hypoxia in the rat	A75-42756
Biochemistry: Investigation of the polyphosphate-synthetase of <i>saccharomyces cerevisiae</i> [NASA-TT-F-16497]	N75-31708
<b>BIOTELEMETRY</b>	
Analog sample/hold circuit for physiological signal monitoring	A75-42322
A multichannel implantable telemetry system for flow, pressure, and ECG measurements	A75-42767
Multichannel subcarrier ECG, respiration, and temperature biotelemetry system	A75-42769
Blood flow and pressure telemetry [AD-A008885]	N75-30781
Electronic auscultation in telemedicine [PE-242009/9]	N75-31717
<b>BLOOD CIRCULATION</b>	
Blood flow and pressure telemetry [AD-A008885]	N75-30781
<b>BLOOD FLOW</b>	
A numerical study of pulsatile flow through constricted arteries	A75-42192
A multichannel implantable telemetry system for flow, pressure, and ECG measurements	A75-42767
Physiological effects of long time sitting	A75-43004
Special report: Occlusive cuff controller [NASA-CR-144430]	N75-31744
<b>BLOOD PLASMA</b>	
Sialoproteids of the liver and blood serum in rats exposed to small doses of ionizing radiation	A75-42316
Circadian variations in concentrations of plasma thyroxine and triiodothyronine in man	A75-42764
Anaerobic recovery in man --- following supramaximal exercise	A75-43434
<b>BLOOD PRESSURE</b>	
Ventral midbrain stimulation, blood pressure responses and their relation to the dopaminergic nigro-striatal pathways	A75-41913
A multichannel implantable telemetry system for flow, pressure, and ECG measurements	A75-42767
Blood flow and pressure telemetry [AD-A008885]	N75-30781
<b>BLUE GREEN ALGAE</b>	
On the origin of plastids --- chloroplast ribosome studies	A75-43899
<b>BODY COMPOSITION (BIOLOGY)</b>	
Prediction of body composition in habitually active middle-aged men	A75-42757
Response and adaptation of Beagle dogs to hypergravity	A75-44128
Gravitational effects on body composition in birds	A75-44129
Control mechanisms of circadian rhythms in body composition: Implications for manned spaceflight [NASA-CR-144413]	N75-31715
<b>BODY FLUIDS</b>	
Metabolic studies of transient tyrosinemia in premature infants	A75-42830
<b>BODY KINEMATICS</b>	
Relationship among the kinematic characteristics of human walking	A75-42813
Invariant properties of the motion parallax field due to the movement of rigid bodies relative to an observer	A75-44650
<b>BODY MEASUREMENT (BIOLOGY)</b>	
In vivo measurement of human body composition [NASA-CR-143375]	N75-30774
<b>BODY SIZE (BIOLOGY)</b>	
Gravitational effects on body composition in birds	A75-44129
<b>BODY TEMPERATURE</b>	
Circadian variations in the sweating mechanism	A75-42758
Multichannel subcarrier ECG, respiration, and temperature biotelemetry system	A75-42769
Response and adaptation of Beagle dogs to hypergravity	A75-44128
Symposium on Temperature Regulation and Drug Action [AD-A006372]	N75-30780
<b>BODY WEIGHT</b>	
Gravitational effects on body composition in birds	A75-44129
<b>BRADYCARDIA</b>	
Autonomic nervous system and adaptation to cold in man	A75-42752
<b>BRAIN</b>	
Adaptation of brain monoamine synthesis to hypoxia in the rat	A75-42756
Specific and general mechanisms of brain support of psychic activity in man and prospects of this problem	A75-42801
Cooperative mechanisms for the sensitivity of brain tissue to external and internal electric fields	A75-42805
Fundamental differences in the informative significance and the physiological meaning of slow electrical processes in the human brain for different measurement ranges of the potential	A75-42806
Functional changes in the deep structures of the human brain during long-term operative memory tests	A75-42807
Statistical properties of the random field of brain bipotentials in man	A75-42809
Bioelectrical activity of the human brain and subjective estimation of time during dreams of different structure	A75-42810
Mechanism of the adaptation of the auditory apparatus to an acoustic load	A75-42811
Quantitative regulation and information estimates for the systemic activity of the brain	A75-42814
A structural method for investigation of slow fluctuations in the human brain	A75-42815
Sensitivity of GABA synthesis in human brain to oxygen poisoning	A75-44358

BRAIN CIRCULATION	
Ventral midbrain stimulation, blood pressure responses and their relation to the dopaminergic nigro-striatal pathways	A75-41913
BREATHING	
Simulation of regional lung emptying during slow and forced expirations	A75-42754
Ability of man to detect increases in his breathing	A75-45123
BREATHING APPARATUS	
System safety evaluation of life support systems for chemical and biological protective suits [AD-A009312]	N75-31752
BREATHING VIBRATION	
A modified measurement of respiratory resistance by forced oscillation during normal breathing	A75-42765
BRIGHTNESS	
Conspicuity of target lights: The influence of flash rate and brightness --- collision avoidance - visual discrimination/pilot performance, aircraft lights [NASA-TN-D-7961]	N75-31732
BUTYRIC ACID	
Sensitivity of GABA synthesis in human brain to oxygen poisoning	A75-44358
<b>C</b>	
CALCIUM METABOLISM	
Myocardial calcium in experimental myocardial infarction	A75-43275
CALIBRATING	
Analog sample/hold circuit for physiological signal monitoring	A75-42322
CAPILLARIES	
Modifying effect of dynamic space flight factors on radiation damage of air-dry seeds of <i>Crepis capillaris</i> /L/ Wallr	A75-44146
CARBOHYDRATES	
Radio-chemical synthesis of amino acids in aqueous media containing carbohydrates, hydrocarbons and nitrates	A75-44134
CARBON DIOXIDE CONCENTRATION	
Effects of hyperoxic gas mixtures on energy metabolism during prolonged work	A75-42761
Stimulus interaction in the responses of carotid body chemoreceptor single afferent fibers --- to independent hypoxic and hypercapnic stimuli	A75-44619
CARBON DIOXIDE TENSION	
Relationship between carotid chemoreceptor activity and ventilation in the cat --- to combined hypoxic and hypercapnic stimuli	A75-44620
CARBON MONOXIDE	
Ventricular function following acute carbon monoxide exposure	A75-45126
CARDIAC VESSELS	
The sequence of normal recovery of excitability in the dog heart	A75-42360
Cardiac and respiratory effects of digitalis during chronic hypoxia in intact conscious dogs	A75-43942
Ventricular function following acute carbon monoxide exposure	A75-45126
CARDIOLOGY	
A long-lived, reliable, rechargeable cardiac pacemaker	N75-31712
CARDIOVASCULAR SYSTEM	
Shunt dynamics in experimental atrial septal defects	A75-42762
Cardiac glycogen in Long-Evans rats - Diurnal pattern and response to exercise	A75-43945
Cardiorespiratory responses to orthostasis and the effects of propranolol	A75-44360
Effects of the abnormal acceleratory environment of flight [AD-A009593]	N75-31716
CAROTID SINUS BODY	
Stimulus interaction in the responses of carotid body chemoreceptor single afferent fibers --- to independent hypoxic and hypercapnic stimuli	A75-44619
Relationship between carotid chemoreceptor activity and ventilation in the cat --- to combined hypoxic and hypercapnic stimuli	A75-44620
CARRIER FREQUENCIES	
Multichannel subcarrier ECG, respiration, and temperature biotelemetry system	A75-42765
CATALYSIS	
Synthesis of biological molecules on molecular sieves --- abiogenic amino acid production	A75-43893
Primary catalytic systems of biogenesis and structure-functional evolution of biocatalysers	A75-43895
CATECHOLAMINE	
Ventral midbrain stimulation, blood pressure responses and their relation to the dopaminergic nigro-striatal pathways	A75-41913
CELLS (BIOLOGY)	
Spontaneous voltage fluctuations in retinal cones and bipolar cells	A75-42683
Membrane damage in dehydrated bacteria and its repair	A75-44136
Quantitative cyto- and histochemical studies of the Deiters' nucleus and nodular cortex of cerebellum in rats exposed to weightlessness	A75-44352
CENTER OF GRAVITY	
Computer model to determine center of gravity and moments of inertia for protective helmets [AD-A009285]	N75-31751
CENTRAL NERVOUS SYSTEM	
Effect of the functional state of the central nervous system on the formation of an elementary motor response /from EEG correlation analysis data/	A75-42808
Quantitative regulation and information estimates for the systemic activity of the brain	A75-42814
Central nervous system involvement following type I aviator's bends complicated by complacency	A75-44362
CENTRIFUGAL FORCE	
Response and adaptation of Beagle dogs to hypergravity	A75-44128
CENTRIFUGING STRESS	
Acceleration tolerance level dependence on age and some morphotic features	A75-42645
Human sensitivity to gravity - On the problem of gravipreferendum	A75-44127
CEREBELLUM	
Quantitative cyto- and histochemical studies of the Deiters' nucleus and nodular cortex of cerebellum in rats exposed to weightlessness	A75-44352
CEREBRAL CORTEX	
Correlation between evoked potentials and processes of sensory analysis in man	A75-42812
Increment spectral sensitivity and colour discrimination in the primate, studied by means of graded potentials from the striate cortex	A75-43422
CHEMICAL EFFECTS	
The application of human operator describing functions to studies on the effects of alcohol and marijuana on human performance	A75-42902

<b>CHEMORECEPTORS</b>		
Ventilatory interaction between hypoxia and $\text{H}^+$ at chemoreceptors of man	A75-42763	
Stimulus interaction in the responses of carotid body chemoreceptor single afferent fibers --- to independent hypoxic and hypercapnic stimuli	A75-42856	A75-42619
Relationship between carotid chemoreceptor activity and ventilation in the cat --- to combined hypoxic and hypercapnic stimuli	A75-44620	A75-44619
<b>CHLORELLA</b>		
The effect of ionizing radiations with different LET on survival and mutation in Chlorella	A75-44148	
<b>CHLOROPLASTS</b>		
On the origin of plastids --- chloroplast ribosome studies	A75-43899	
<b>CHROMOSOMES</b>		
Autosomal recombination in males of <i>Drosophila melanogaster</i> caused by a transmissible factor	A75-42827	
<b>CHRONIC CONDITIONS</b>		
Cardiac and respiratory effects of digitalis during chronic hypoxia in intact conscious dogs	A75-43942	
<b>CIRCADIAN RHYTHMS</b>		
Circadian variations in the sweating mechanism	A75-42758	
Circadian variations in concentrations of plasma thyroxine and triiodothyronine in man	A75-42764	
Cardiac glycogen in Long-Evans rats - Diurnal pattern and response to exercise	A75-43945	
Mapping of individual circadian rhythm [NASA-TT-F-16502]	N75-30775	
Control mechanisms of circadian rhythms in body composition: Implications for manned spaceflight [NASA-CR-144413]	N75-31715	
<b>CIRCUIT DIAGRAMS</b>		
Portable medical status system [NASA-CE-144411]	N75-30798	
<b>CLEAN ROOMS</b>		
Quantitative relationship between airborne viable and total particles	A75-42799	
<b>CLINICAL MEDICINE</b>		
Progress in medical research, including communicable diseases, military dog improvement, radiation injury, and tropical and internal medicine [AD-A008984]	N75-31722	
<b>CLOSED ECOLOGICAL SYSTEMS</b>		
Space garden [NASA-IT-F-16421]	N75-30769	
<b>COCKPITS</b>		
The man-machine interface --- in cockpit	A75-44323	
<b>COLD ACCLIMATIZATION</b>		
Autonomic nervous system and adaptation to cold in man	A75-42752	
<b>COLD WEATHER</b>		
Exploratory analysis of predictors of diver performance decrement during 3 hour cold water exposures [AD-A009359]	N75-31724	
<b>COLLISION AVOIDANCE</b>		
ROBNAV - A range-based robot navigation and obstacle avoidance algorithm	A75-42903	
Conspicuity of target lights: The influence of flash rate and brightness --- collision avoidance - visual discrimination/pilot performance, aircraft lights [NASA-TN-D-7961]	N75-31732	
<b>COLOR VISION</b>		
Increment spectral sensitivity and colour discrimination in the primate, studied by means of graded potentials from the striate cortex	A75-43422	
<b>COMPRESSORY TRACKING</b>		
Basic attention measures as predictors of success in flight training [AD-A006385]	N75-30789	
<b>COMPUTER TECHNIQUES</b>		
A program-controlled device for operative man/minicomputer interaction		A75-42856
ROBNAV - A range-based robot navigation and obstacle avoidance algorithm		A75-42903
Optokinetic nystagmus during selective retinal stimulation		A75-43350
The effect of target surround density on visual search performance		A75-43846
The development of a real-time electrocardiogram analyzing system using the POP-15 computer [AD-A008672]		N75-30784
<b>COMPUTERIZED DESIGN</b>		
Computer model to determine center of gravity and moments of inertia for protective helmets [AD-A009285]		N75-31751
<b>COMPUTERIZED SIMULATION</b>		
Computerized method for analyzing maximum and partial expiratory flow-volume curves		A75-42766
Computer simulation of robot-manipulator control --- Russian book		A75-43249
<b>CONFERENCES</b>		
Life sciences and space research XIII; Proceedings of the Seventeenth Plenary Meeting, Sao Paulo, Brazil, June 17-July 1, 1974		A75-44126
Symposium on Temperature Regulation and Drug Action [AD-A006372]		N75-30780
Noise and Speech Interference: Proceedings of Minisymposium [NASA-TM-X-72696]		N75-31731
<b>CONTACT LENSES</b>		
Soft hydrophilic contact lenses in civil and military aviation		A75-44363
<b>CONTAMINATION</b>		
Techniques for avoiding biological contamination of the outer planets by atmospheric probes [AIAA PAPER 75-1164]		A75-44269
<b>CONTROL SIMULATION</b>		
Computer simulation of robot-manipulator control --- Russian book		A75-43249
<b>CONTROL THEORY</b>		
Concept of algorithmic control for a class of large systems		A75-45054
<b>CONVECTIVE HEAT TRANSFER</b>		
On differences in sensitivity of the thermoreceptors of the skin to radiative and convective thermal action		A75-42997
<b>CORONARY CIRCULATION</b>		
Shunt dynamics in experimental atrial septal defects		A75-42762
<b>COSMIC RAYS</b>		
Flux of high-LET cosmic-ray particles in manned space flight		A75-44140
Results of the <i>Bacillus subtilis</i> unit of the Biostack II experiment - Physical characteristics and biological effects of individual cosmic HZE particles		A75-44145
Effects of space balloon flights on reproductive activity in <i>Paramecium aurelia</i>		A75-44147
Cosmic radiation exposure in supersonic and subsonic flight		A75-44361
<b>COSMONAUTS</b>		
Assessment of the efficiency of human performance in space flight [JPBS-65477]		N75-31730
<b>CRASH INJURIES</b>		
Strain of human bodies protected by safety belts in simulated frontal crashes [CSIR-TRANS-1196]		N75-30779
<b>CRYSTAL OPTICS</b>		
Asymmetric adsorption by quartz - A model for the prebiotic origin of optical activity		A75-43890

## CULTURE TECHNIQUES

Effects of space balloon flights on reproductive activity in *Paramecium aurelia* A75-44147

## CYTOLOGY

On the origin of plastids --- chloroplast ribosome studies A75-43899

## CZECHOSLOVAKIA

Species of fungi of the Hygrophoraceae family on the Velka Borka Hill near Michovka Bradiste [NASA-TT-F-16492] N75-30768

## D

## DARK ADAPTATION

Spontaneous voltage fluctuations in retinal cones and bipolar cells A75-42683

## DATA STORAGE

Analog sample/hold circuit for physiological signal monitoring A75-42322

## DECISION MAKING

Psychophysical models for signal detection with time varying uncertainty [NASA-CR-137734] N75-30788

## DECOMPRESSION SICKNESS

Study of the characteristics of decompressive gas formation with the aid of ultrasound A75-42263

The effect of decompression on the alimentary canal A75-42644

Central nervous system involvement following type I aviator's bends complicated by cosplacency A75-44362

A new gas lesion syndrome in man, induced by 'isobaric gas counterdiffusion' A75-45125

## DEHYDRATION

Differential permeation of artemia cysts and cucumber seeds by alcohols A75-42828

Membrane damage in dehydrated bacteria and its repair A75-44136

## DIAGNOSIS

Diagnostic accuracy of an ultrasonic multiple transducer cardiac imaging system A75-42775

## DIFFRACTION PATTERNS

High-speed holography of vibrating objects and rapid events --- ultrasonic bonders and eardrums A75-42578

## DIGITAL SIMULATION

A family of models for measuring human reliability A75-44212

## DIGITAL SYSTEMS

A high accuracy linear rate meter --- digital design for heart and respiratory rate measurements A75-42768

## DIGITALIS

Cardiac and respiratory effects of digitalis during chronic hypoxia in intact conscious dogs A75-43942

## DISPLAY DEVICES

The effect of target surround density on visual search performance A75-43846

Motion relationships in aircraft attitude and guidance displays - A flight experiment A75-43848

Aircraft simulator motion and the order of merit of flight attitude and steering guidance displays A75-43849

The transition of experienced pilots to a frequency-separated aircraft attitude display A75-43850

Evaluation of slide-tape lecture programs used in aero laboratories [AD-A009571] N75-31741

Helmet-mounted display implications for Army aviation [AD-A009507] N75-31748

## DISTILLATION EQUIPMENT

Vapor compression distillation module [NASA-CR-144024] N75-31747

## DIURNAL VARIATIONS

Cardiac glycogen in Long-Evans rats - Diurnal pattern and response to exercise A75-43945

## DIVING (UNDERWATER)

Cognitive and psychomotor performance during NOAA OPS 1 and 2 --- diver performance in nitrogen habitat [AD-A005643] N75-30791

Exploratory analysis of predictors of diver performance decrement during 3 hour cold water exposures [AD-A009359] N75-31724

## DOGS

Blood flow and pressure telemetry [AD-A008885] N75-30781

## DOPPLER EFFECT

Acoustic Doppler echocardiograph A75-43820

## DOSIMETERS

The study of the radiation environment in near-earth space --- dose measurements by Cosmos satellites A75-44141

Distribution effectiveness for space radiation dosimetry A75-44434

## DREAMS

Bioelectrical activity of the human brain and subjective estimation of time during dreams of different structure A75-42810

## DROSOPHILA

Autosomal recombination in males of *Drosophila melanogaster* caused by a transmissible factor A75-42827

## DRUGS

Human bioassay of antimotion sickness drugs [AD-A009799] N75-31727

## DYNAMIC CONTROL

Concept of algorithmic control for a class of large systems A75-45054

Control mechanisms of circadian rhythms in body composition: Implications for manned spaceflight [NASA-CR-144413] N75-31715

## E

## EAR

Models of hearing --- in man A75-44191

Infrasound - A short review of effects on man A75-44354

## EAR PROTECTORS

A study of proposed ear protection devices for low frequency noise attenuation [AD-A009274] N75-31750

## EARDRUMS

Microholcgraphy - Interferometric investigation of deformations of the eardrum of guinea pigs undergoing transient sound effects A75-42580

## EARTH ENVIRONMENT

The study of the radiation environment in near-earth space --- dose measurements by Cosmos satellites A75-44141

## ECHOCARDIOGRAPHY

Diagnostic accuracy of an ultrasonic multiple transducer cardiac imaging system A75-42775

Acoustic Doppler echocardiograph A75-43820

## ECOSYSTEMS

Modeling the dynamics of biological and chemical components of aquatic ecosystems [PB-241987/7] N75-31710

## EDUCATION

Evaluation of slide-tape lecture programs used in aero laboratories [AD-A009571] N75-31741

## EGGS

The influence of variable gravitational fields on the embryonic development of some caecidate amphibians A75-44130

Radiobiological results of the Biostack experiment on board Apollo 16 and 17	A75-44144
<b>ELECTRIC CURRENT</b>	
An evaluation of electroanesthesia and electrosleep [PE-241305/2]	N75-30787
<b>ELECTRIC DISCHARGES</b>	
Exponential kinetics of formation of organic microstructures	A75-43897
<b>ELECTRIC FIELDS</b>	
Effect of 50-Hz fields on man [ELL-CR-TRANS-6689-(9022.09)]	N75-30770
<b>ELECTRIC STIMULI</b>	
Ventral midbrain stimulation, blood pressure responses and their relation to the dopaminergic nigro-striatal pathways	A75-41913
The sequence of normal recovery of excitability in the dog heart	A75-42360
<b>ELECTROANESTHESIA</b>	
An evaluation of electroanesthesia and electrosleep [PE-241305/2]	N75-30787
<b>ELECTROCARDIOGRAPHY</b>	
The sequence of normal recovery of excitability in the dog heart	A75-42360
Multichannel subcarrier ECG, respiration, and temperature bimlemetry system	A75-42769
The development of a real-time electrocardiogram analyzing system using the POP-15 computer [AD-A008672]	N75-30784
<b>ELECTROENCEPHALOGRAPHY</b>	
A multichannel implantable telemetry system for flow, pressure, and ECG measurements	A75-42767
Microelectrode investigation of the neuronal mechanisms of voluntary mnemonic activity in man	A75-42803
Cooperative mechanisms for the sensitivity of brain tissue to external and internal electric fields	A75-42805
Fundamental differences in the informative significance and the physiological meaning of slow electrical processes in the human brain for different measurement ranges of the potential	A75-42806
Effect of the functional state of the central nervous system on the formation of an elementary motor response /from EEG correlation analysis data/	A75-42808
Statistical properties of the random field of brain biopotentials in man	A75-42809
Quantitative regulation and information estimates for the systemic activity of the brain	A75-42814
<b>ELECTROLYTE METABOLISM</b>	
Myocardial calcium in experimental myocardial infarction	A75-43275
<b>ELECTROMAGNETIC ABSORPTION</b>	
Long-wavelength electromagnetic power absorption in prolate spheroidal models of man and animals	A75-43271
<b>ELECTROMAGNETIC FIELDS</b>	
Effect of 50-Hz fields on man [ELL-CR-TRANS-6689-(9022.09)]	N75-30770
<b>ELECTROPHYSIOLOGY</b>	
Sleep patterns after graded exercise	A75-42753
Fundamental differences in the informative significance and the physiological meaning of slow electrical processes in the human brain for different measurement ranges of the potential	A75-42806
Long-wavelength electromagnetic power absorption in prolate spheroidal models of man and animals	A75-43271
<b>ELECTRORETINOGRAPHY</b>	
The electrical response of the human eye to sinusoidal light stimulation	A75-42320
<b>EMBOLISMS</b>	
A new gas lesion syndrome in man, induced by 'isobaric gas counterdiffusion'	A75-45125
<b>EMBRYOLOGY</b>	
The influence of variable gravitational fields on the embryonic development of some caudate amphibians	A75-44130
<b>EMERGENCY LIFE SUSTAINING SYSTEMS</b>	
Skylab IAMS checklist application study for emergency medical care --- emergency medical care operations involving the use and operation of the portable ambulance module [NASA-CR-144394]	N75-30772
<b>EMOTIONAL FACTORS</b>	
Specific and general mechanisms of brain support of psychic activity in man and prospects of this problem	A75-42801
<b>ENDOCRINE SECRETIONS</b>	
Role of the hypothalamic neurosecretory system in adaptive reactions of the body: Contribution to the problem of neurohormonal interactions [NASA-TT-P-16329]	N75-31711
<b>ENERGY TRANSFER</b>	
Flux of high-LET cosmic-ray particles in manned space flight	A75-44140
<b>ENGINEERING DRAWINGS</b>	
Portable medical status system [NASA-CR-144411]	N75-30798
<b>ENVIRONMENT EFFECTS</b>	
Physical dosimetric evaluations in the Apollo 16 microbial response experiment	A75-44142
<b>ENVIRONMENTAL MONITORING</b>	
The study of the radiation environment in near-earth space --- dose measurements by Cosmos satellites	A75-44141
<b>ENZYME ACTIVITY</b>	
Primary catalytic systems of biogenesis and structure-functional evolution of biocatalysers	A75-43895
Effect of exercise on lipoprotein lipase activity in rat heart and skeletal muscle	A75-43944
Quantitative cyto- and histochemical studies of the Deiters' nucleus and nodular cortex of cerebellum in rats exposed to weightlessness	A75-44352
Sensitivity of GABA synthesis in human brain to oxygen poisoning	A75-44358
<b>ESTERS</b>	
Polymerization of amino acid methyl esters via their copper complexes	A75-43894
<b>ETHYL ALCOHOL</b>	
The application of human operator describing functions to studies on the effects of alcohol and marijuana on human performance	A75-42902
Ethanol-induced lowering of arterial oxyhemoglobin saturation during hypoxia	A75-44353
<b>EVOLUTION (DEVELOPMENT)</b>	
Some considerations of the theoretical limits for living organisms	A75-44135
<b>EXOBIOLOGY</b>	
Fluorescence detection of organic molecules in the Jovian atmosphere	A75-43892
Life in the universe and man in space [NASA-TT-P-16563]	N75-31754
Exobiology of the moon [NASA-TT-P-16378]	N75-31755
<b>EXPERIMENTAL DESIGN</b>	
Optimum uses of psychobiological, sensorimotor, and performance measurement strategies --- for industrial safety	A75-43844
<b>EXPIRED AIR</b>	
Simulation of regional lung emptying during slow and forced expirations	A75-42754

Computerized method for analyzing maximum and partial expiratory flow-volume curves A75-42766

**EXTRATERRESTRIAL COMMUNICATION**  
Stanford workshop on extraterrestrial civilization - Opening a new scientific dialog A75-43900

**EXTRATERRESTRIAL LIFE**  
Stanford workshop on extraterrestrial civilization - Opening a new scientific dialog A75-43900

Is the detection of optical activity in extraterrestrial samples a safe indicator for life A75-44133

Consideration of probability of bacterial growth for Jovian planets and their satellites A75-44139

**EXTRATERRESTRIAL RADIATION**  
Peculiarities of biological action of hadrons of space radiation A75-44149

**EXTRAVEHICULAR ACTIVITY**  
On development of a sealed bearing for space suits [NASA-CR-144435] N75-31743

**EYE (ANATOMY)**  
Soft hydrophilic contact lenses in civil and military aviation A75-44363

Ocular absorption of laser radiation for calculating personnel hazards [AE-A009176] N75-31719

**EYE DISEASES**  
The electrical response of the human eye to sinusoidal light stimulation A75-42320

**EYE MOVEMENTS**  
Eye movement response to simultaneous stimulation of the vestibular and visual receptors A75-44350

**F**

**FATIGUE (BIOLOGY)**  
Sleep patterns after graded exercise A75-42753

Characteristics of the regulation of cardiac rhythm during mental work A75-44050

**FATTY ACIDS**  
Turnover of free fatty acids during recovery from exercise A75-42759

Effects of hyperoxic gas mixtures on energy metabolism during prolonged work A75-42761

Effect of exercise on lipoprotein lipase activity in rat heart and skeletal muscle A75-43944

**FLIGHT CONDITIONS**  
The development of seedling shoots under space flight conditions A75-44132

**FLIGHT CREWS**  
Surveillance of some infectious diseases among aircrew personnel in Southeast Asia A75-44357

**FLIGHT SAFETY**  
Reliability of life support systems as related to general space flight safety requirements A75-42052

**FLIGHT SIMULATION**  
Aircraft simulator motion and the order of merit of flight attitude and steering guidance displays A75-43849

Design of a motion simulator with several degrees of freedom for ergonomic studies [DGON PAPER 1] A75-44110

Effects of Pyrobenzamine and Plimasin on fighter pilots flying a fighter intercept mission in the F4D flight simulator A75-44364

**FLIGHT SIMULATORS**  
The transition of experienced pilots to a frequency-separated aircraft attitude display A75-43850

Effects of aircraft simulator motion cue fidelity on pilot performance [DGON PAPER 1] A75-44106

Transfer of training with formation flight trainer [AD-A009638] N75-31739

**FLIGHT SURGEONS**  
Recent advances in aerospace medicine [AD-A009132] N75-31718

**FLIGHT TESTS**  
Motion relationships in aircraft attitude and guidance displays - A flight experiment A75-43848

The transition of experienced pilots to a frequency-separated aircraft attitude display A75-43850

**FLIGHT TRAINING**  
Basic attention measures as predictors of success in flight training [AD-A006385] N75-30789

**FLOW MEASUREMENT**  
A modified measurement of respiratory resistance by forced oscillation during normal breathing A75-42765

**FLOW STABILITY**  
A numerical study of pulsatile flow through constricted arteries A75-42192

**FLOWMETERS**  
Development of ultrasonic methods of hemodynamic measurements --- rheoencephalography/flowmeters [NASA-CR-143458] N75-31714

**FLUORESCENCE**  
Fluorescence detection of organic molecules in the Jovian atmosphere A75-43892

**FORCED VIBRATION**  
A modified measurement of respiratory resistance by forced oscillation during normal breathing A75-42765

**FORESTS**  
The introduction of mycorrhizal fungi into forested areas of Veronezh region (oblast) [NASA-TT-F-16481] N75-30767

Species of fungi of the Hygrophoraceae family on the Velka Borka Hill near Mnichovo Hradiste [NASA-TT-F-16492] N75-30768

**FOVEA**  
Increment spectral sensitivity and colour discrimination in the primate, studied by means of graded potentials from the striate cortex A75-43422

**FREQUENCY RESPONSE**  
Sustained and transient channels in human vision A75-43424

**FUNGI**  
The introduction of mycorrhizal fungi into forested areas of Veronezh region (oblast) [NASA-TT-F-16481] N75-30767

Species of fungi of the Hygrophoraceae family on the Velka Borka Hill near Mnichovo Hradiste [NASA-TT-F-16492] N75-30768

**G**

**GAMMA RAYS**  
Radio-chemical synthesis of amino acids in aqueous media containing carbohydrates, hydrocarbons and nitrates A75-44134

**GAS CHROMATOGRAPHY**  
Metabolic studies of transient tyrosinemia in premature infants A75-42830

**GAS EXCHANGE**  
Nitrogen exchange across the lungs in resting man A75-44621

**GAS IONIZATION**  
The temperature dependences of some types of gaseous ionic reactions of astrochemical interest A75-43891

**GAS MIXTURES**  
Synthesis of biological molecules on molecular sieves --- abiogenic amino acid production A75-43893

**GASEOUS DIFFUSION**  
A new gas lesion syndrome in man, induced by 'isobaric gas counterdiffusion' A75-45125

**GASTROINTESTINAL SYSTEM**  
The effect of decompression on the alimentary canal A75-42644

<b>GENETIC CODE</b>	
Speculations on the evolution of the genetic code	
A75-43896	
<b>GENETICS</b>	
Autosomal recombination in males of <i>Drosophila melanogaster</i> caused by a transmissible factor	
A75-42827	
<b>GERMINATION</b>	
The development of seedling shoots under space flight conditions	
A75-44132	
<b>GLYCINE</b>	
Polymerization of amino acid methyl esters via their copper complexes	
A75-43894	
<b>GLYCOGENS</b>	
Cardiac glycogen in Long-Evans rats - Diurnal pattern and response to exercise	
A75-43945	
<b>GLYCOLYSIS</b>	
Anaerobic recovery in man --- following supramaximal exercise	
A75-43434	
Leg muscle metabolism during exercise in the heat and cold	
A75-43437	
<b>GOOGLES</b>	
Preliminary evaluation of commercially available laser protective eyewear [PB-241903/4]	
N75-31753	
<b>GRAVITATIONAL EFFECTS</b>	
Human sensitivity to gravity - On the problem of gravipreferendum	
A75-44127	
Response and adaptation of Beagle dogs to hypergravity	
A75-44128	
Gravitational effects on body composition in birds	
A75-44129	
The influence of variable gravitational fields on the embryonic development of some ecaudate amphibians	
A75-44130	
The development of seedling shoots under space flight conditions	
A75-44132	
<b>H</b>	
<b>HABITABILITY</b>	
Habitability of ships [JPBS-65334]	
N75-30794	
<b>HADRONS</b>	
Peculiarities of biological action of hadrons of space radiation	
A75-44149	
<b>HEALTH PHYSICS</b>	
Long-wavelength electromagnetic power absorption in prolate spheroidal models of man and animals	
A75-43271	
Effects in rodents of a 1-month exposure to magnetic fields /200-1200 gauss/	
A75-44359	
Cosmic radiation exposure in supersonic and subsonic flight	
A75-44361	
Distribution effectiveness for space radiation dosimetry	
A75-44434	
<b>HEARING</b>	
Models of hearing --- in man	
A75-44191	
<b>HEART DISEASES</b>	
Diagnostic accuracy of an ultrasonic multiple transducer cardiac imaging system	
A75-42775	
<b>HEART FUNCTION</b>	
Experimental cardiac necrosis in hypobaric and anemic hypoxia	
A75-42755	
Shunt dynamics in experimental atrial septal defects	
A75-42762	
Acoustic Doppler echocardiograph	
A75-43820	
Ventricular function following acute carbon monoxide exposure	
A75-45126	
<b>HEART RATE</b>	
A high accuracy linear rate meter --- digital design for heart and respiratory rate measurements	
A75-42768	
Characteristics of the regulation of cardiac rhythm during mental work	
A75-44050	
Frequency characteristics of the regulatory systems of the heart	
A75-44051	
Response and adaptation of Beagle dogs to hypergravity	
A75-44128	
Effect of exogenous catecholamines on heart rate and thermoregulation in the hibernating hedgehog ( <i>Erinaceus europaeus</i> L.). [NASA-TT-F-16533]

**HUMAN BEHAVIOR**

Cooperative mechanisms for the sensitivity of brain tissue to external and internal electric fields A75-42805

Mapping of individual circadian rhythm [NASA-TT-F-16502] N75-30775

Higher nervous activity of man: Motivational-emotional aspects [NASA-TT-F-16453] N75-30777

Psychophysical models for signal detection with time varying uncertainty [NASA-CR-137734] N75-30788

**HUMAN FACTORS ENGINEERING**

Noise in space --- effect on Skylab astronauts A75-42707

The application of human operator describing functions to studies on the effects of alcohol and marijuana on human performance A75-42902

Aircraft simulator motion and the order of merit of flight attitude and steering guidance displays A75-43849

Design of a motion simulator with several degrees of freedom for ergonomic studies [DGON PAPER 1] A75-44110

A family of models for measuring human reliability A75-44212

Optimal multimodal parameter identification in the state space model of the human operator [AD-A008707] N75-30793

Posture and seat design for the car driver [RAE-LIE-TRANS-1842] N75-30796

Investigation of inertial properties of the human body [PE-241566/9] N75-31725

**HUMAN PATHOLOGY**

Surveillance of some infectious diseases among aircrew personnel in Southeast Asia A75-44357

Strain of human bodies protected by safety belts in simulated frontal crashes [CSIR-TRANS-1196] N75-30779

**HUMAN PERFORMANCE**

Specific and general mechanisms of brain support of psychic activity in man and prospects of this problem A75-42801

Human physiology and the science of psychology /formulation of the problem/ A75-42802

Functional changes in the deep structures of the human brain during long-term operative memory tests A75-42807

Statistical properties of the random field of brain biopotentials in man A75-42809

Bioelectrical activity of the human brain and subjective estimation of time during dreams of different structure A75-42810

Correlation between evoked potentials and processes of sensory analysis in man A75-42812

Relationship among the kinematic characteristics of human walking A75-42813

Experimental study of the performance of competition swimmers A75-43435

Optimum uses of psychobiological, sensorimotor, and performance measurement strategies --- for industrial safety A75-43844

Visual time compression - Spatial and temporal cues A75-43845

The effect of target surround density on visual search performance A75-43846

Pacing, product complexity, and task perception in simulated inspection A75-43847

A family of models for measuring human reliability A75-44212

The man-machine interface --- in cockpit A75-44323

Mapping of individual circadian rhythm [NASA-TT-F-16502] N75-30775

**BIOLOGICAL INDIVIDUALITY OF MAN**

[AD-A008888] N75-30782

Cognitive and psychomotor performance during NOAA OPS 1 and 2 --- diver performance in nitrogen habitat [AD-A005643] N75-30791

Effects of high temperature on maintenance performance [AD-A009295] N75-31720

Exploratory analysis of predictors of diver performance decrement during 3 hour cold water exposures [AD-A009359] N75-31724

A user oriented review of the literature on the effects of sleep loss, work-rest schedules, and recovery on performance [AD-A009778] N75-31726

Design and construction of a computer controllable multi-chromatic stimulus for human visual system testing and modeling [AD-A008678] N75-31729

Assessment of the efficiency of human performance in space flight [JPRS-65477] N75-31730

**HUMAN REACTIONS**

Anaerobic recovery in man --- following supramaximal exercise A75-43434

Human assay of antimotion sickness drugs A75-44351

Soft hydrophilic contact lenses in civil and military aviation A75-44363

Effect of inspiratory resistance on occlusion pressure in hypoxia and hypercapnia A75-44618

Ability of man to detect increases in his breathing A75-45123

Effect of 50-Hz fields on man [BLL-CE-TRANS-6689-(9022.09)] N75-30770

An evaluation of electroanesthesia and electrosleep [PB-241305/2] N75-30787

Transfer and use of training technology: A model for matching training approaches with training settings [AD-A005616] N75-30790

Habitability of ships [JPRS-65334] N75-30794

**HUMAN TOLERANCES** Acceleration tolerance level dependence on age and some morphotic features A75-42645

Physiological effects of long time sitting A75-43004

Human sensitivity to gravity - On the problem of gravipreferendum A75-44127

Influence of auditory fatigue on the perception of speech under conditions of intense low-frequency noise A75-44511

**HYDROCARBONS** Radio-chemical synthesis of amino acids in aqueous media containing carbohydrates, hydrocarbons and nitrates A75-44134

**HYDROGEN IONS** Ventilatory interaction between hypoxia and  $H^+$  at chemoreceptors of man A75-42763

Effect of norepinephrine on myocardial intracellular hydrogen ion concentration A75-43943

**HYGROMETERS** Use of dew-point detection for quantitative measurement of sweating rate A75-45127

**HYPERBARIC CHAMBERS** Cognitive and psychomotor performance during NOAA OPS 1 and 2 --- diver performance in nitrogen habitat [AD-A005643] N75-30791

**HYPERCAPNIA** Effect of inspiratory resistance on occlusion pressure in hypoxia and hypercapnia A75-44618

## HYPEROXIA

Effects of hyperoxic gas mixtures on energy metabolism during prolonged work A75-42761  
 Sensitivity of GABA synthesis in human brain to oxygen poisoning A75-44358

## HYPOBARIC ATMOSPHERES

The effect of decompression on the alimentary canal A75-42644  
 Experimental cardiac necrosis in hypobaric and anemic hypoxia A75-42755  
 Hematologic changes in mice during and after exposure to severe hypobaric hypoxia A75-44356

## HYPOTHALAMUS

Biogenic amines and acute thermal stress in the rat A75-43975  
 Role of the hypothalamic neurosecretory system in adaptive reactions of the body: Contribution to the problem of neurohormonal interactions [NASA-TT-F-16329] N75-31711

## HYPOXIA

Experimental cardiac necrosis in hypobaric and anemic hypoxia A75-42755  
 Adaptation of brain monoamine synthesis to hypoxia in the rat A75-42756  
 Ventilatory interaction between hypoxia and  $\text{H}^+$  at chemoreceptors of man A75-42763  
 Cardiac and respiratory effects of digitalis during chronic hypoxia in intact conscious dogs A75-43942  
 Ethanol-induced lowering of arterial oxyhemoglobin saturation during hypoxia A75-44353  
 Hematologic changes in mice during and after exposure to severe hypobaric hypoxia A75-44356  
 Effect of inspiratory resistance on occlusion pressure in hypoxia and hypercapnia A75-44618

## IMAGING TECHNIQUES

Diagnostic accuracy of an ultrasonic multiple transducer cardiac imaging system A75-42775

## IMPLANTATION

A multichannel implantable telemetry system for flow, pressure, and ECG measurements A75-42767

## IMPLANTED ELECTRODES (BIOLOGY)

Microelectrode investigation of the neuronal mechanisms of voluntary mnemonic activity in man A75-42803

## INDUSTRIAL PLANTS

An integrated workload and manpower planning system for the Naval Air Rework Facility, North Island [AD-A006293] N75-30792

## INDUSTRIAL SAFETY

Optimum uses of psychobiological, sensorimotor, and performance measurement strategies --- for industrial safety A75-43844

## INERTIA

Investigation of inertial properties of the human body [PB-241566/9] N75-31725

## INFECTIOUS DISEASES

Surveillance of some infectious diseases among aircrew personnel in Southeast Asia A75-44357

Progress in medical research, including communicable diseases, military dog improvement, radiation injury, and tropical and internal medicine [AD-A008984] N75-31722

## INFORMATION FLOW

Abstraction and encoding of sensory information [AD-A008929] N75-30783

## INFORMATION SYSTEMS

Electronic auscultation in telemedicine [PE-242009/9] N75-31717

## INFRASOUND FREQUENCIES

Infrasound - A short review of effects on man A75-44354

## INSTRUMENT ERRORS

A high accuracy linear rate meter --- digital design for heart and respiratory rate measurements A75-42768

## INTELLIGENCE

Identification and measurement of intellective load carrying thresholds [AD-A009159] N75-31742

## INTERSTELLAR GAS

The temperature dependences of some types of gaseous ionic reactions of astrochemical interest A75-43891

## INVARIANCE

Invariant properties of the motion parallax field due to the movement of rigid bodies relative to an observer A75-44650

## ION CONCENTRATION

Effect of norepinephrine on myocardial intracellular hydrogen ion concentration A75-43943

## IONIC REACTIONS

The temperature dependences of some types of gaseous ionic reactions of astrochemical interest A75-43891

## IONIZING RADIATION

Sialoproteids of the liver and blood serum in rats exposed to small doses of ionizing radiation A75-42316

The effect of ionizing radiations with different LET on survival and mutation in Chlorella A75-44148

## ISOMERS

The origin of optical asymmetry on earth A75-43888

## ISOTOPIC LABELING

Turnover of free fatty acids during recovery from exercise A75-42759

## J

## JUPITER (PLANET)

Consideration of probability of bacterial growth for Jovian planets and their satellites A75-44139

## JUPITER ATMOSPHERE

Fluorescence detection of organic molecules in the Jovian atmosphere A75-43892

## L

## LACTATES

Effects of equivalent sea-level and altitude training on maximal oxygen uptake and running performance A75-42760

## LACTIC ACID

Anaerobic recovery in man --- following supramaximal exercise A75-43434

## LAKES

Phytoplankton populations in relation to different trophic levels at Winnipesaukee Lake, New Hampshire, USA [PB-240981/1] N75-31709

## LASERS

Ocular absorption of laser radiation for calculating personnel hazards [AD-A009176] N75-31719

Preliminary evaluation of commercially available laser protective eyewear [PB-241903/4] N75-31753

## LEAD (METAL)

Lead belt radiation shield [AD-A009181] N75-31721

## LESIONS

A new gas lesion syndrome in man, induced by 'isobaric gas counterdiffusion' A75-45125

## LIFE DETECTORS

Is the detection of optical activity in extraterrestrial samples a safe indicator for life A75-44133

**LIFE SCIENCES**

Life sciences and space research III; Proceedings of the Seventeenth Plenary Meeting, Sao Paulo, Brazil, June 17-July 1, 1974

A75-44126

**LIFE SUPPORT SYSTEMS**

Reliability of life support systems as related to general space flight safety requirements

A75-42052

Life support systems aboard the Soyuz-18-Salyut-4 flight

A75-30797

[NASA-TT-F-16500] Thermal control extravehicular life support system [NASA-CR-144425]

A75-31746

A graphical summary of oxygen regulator performance [AD-A009134]

A75-31749

System safety evaluation of life support systems for chemical and biological protective suits [AD-A009312]

A75-31752

**LINEAR ENERGY TRANSFER (LET)**

The effect of ionizing radiations with different LET on survival and mutation in Chlorella

A75-44148

**LIPIDS**

Differential permeation of artemia cysts and cucumber seeds by alcohols

A75-42828

**LIPOPROTEINS**

Effect of exercise on lipoprotein lipase activity in rat heart and skeletal muscle

A75-43944

**LIVER**

Sialoproteins of the liver and blood serum in rats exposed to small doses of ionizing radiation

A75-42316

**LONG TERM EFFECTS**

Noise in space --- effect on Skylab astronauts

A75-42707

**LONG WAVE RADIATION**

Long-wavelength electromagnetic power absorption in prolate spheroidal models of man and animals

A75-43271

**LOW FREQUENCIES**

Influence of auditory fatigue on the perception of speech under conditions of intense low-frequency noise

A75-44511

A study of proposed ear protection devices for low frequency noise attenuation [AD-A009274]

A75-31750

**M****MAGNETIC EFFECTS**

Effects in rodents of a 1-month exposure to magnetic fields /200-1200 gauss/

A75-44359

**MAGNETIC FIELDS**

Effects in rodents of a 1-month exposure to magnetic fields /200-1200 gauss/

A75-44359

**MAINTENANCE**

Effects of high temperature on maintenance performance [AC-A009295]

A75-31720

**MAMMALS**

Effect of exogenous catecholamines on heart rate and thermoregulation in the hibernating hedgehog (Erinaceus europaeus L.).

A75-30776

**MAN MACHINE SYSTEMS**

A program-controlled device for operative man/minicomputer interaction

A75-42856

Pacing, product complexity, and task perception in simulated inspection

A75-43847

Design of a motion simulator with several degrees of freedom for ergonomic studies

A75-44110

A family of models for measuring human reliability

**MEDICAL ELECTRONICS**

A high accuracy linear rate meter --- digital design for heart and respiratory rate measurements

A75-42768

**MEDICAL EQUIPMENT**

Urine sampling and collection system optimization and testing [NASA-CR-144401]

A75-30795

Portable medical status system [NASA-CR-144411]

A75-30798

**MECHANOBANES**

Differential permeation of artemia cysts and cucumber seeds by alcohols

A75-42828

**MEMORY**

Microelectrode investigation of the neuronal mechanisms of voluntary amnesia activity in man

A75-42803

Organizational principles of the neural code of individual psychic activity

A75-42804

Functional changes in the deep structures of the human brain during long-term operative memory tests

A75-42807

## MENTAL PERFORMANCE

MENTAL PERFORMANCE	
Characteristics of the regulation of cardiac rhythms during mental work	A75-44050
HIGHER NERVOUS ACTIVITY OF MAN:	
Motivational-emotional aspects [NASA-TT-F-16453]	N75-30777
METAL IONS	
Primary catalytic systems of biogenesis and structure-functional evolution of biocatalysers	A75-43895
METHYL ALCOHOLS	
Differential permeation of artemia cysts and cucumber seeds by alcohols	A75-42828
METHYL COMPOUNDS	
Polymerization of amino acid methyl esters via their copper complexes	A75-43894
MICROBIOLOGY	
Quantitative relationship between airborne viable and total particles	A75-42799
PHYSICAL DOSIMETRIC EVALUATIONS IN THE APOLLO 16 MICROBIAL RESPONSE EXPERIMENT	A75-44142
MICROORGANISMS	
Some considerations of the theoretical limits for living organisms	A75-44135
New methodology for assessing the probability of contaminating Mars	A75-44138
Techniques for avoiding biological contamination of the outer planets by atmospheric probes [AIAA PAPER 75-1164]	A75-44269
MICROSTRUCTURE	
Exponential kinetics of formation of organic microstructures	A75-43897
MILITARY AVIATION	
Transfer and use of training technology: A model for matching training approaches with training settings [AD-A005816]	N75-30790
MILITARY HELICOPTERS	
Helmet-mounted display implications for Army aviation [AD-AC09507]	N75-31748
MILITARY TECHNOLOGY	
The man-machine interface --- in cockpit	A75-44323
MINICOMPUTERS	
A program-controlled device for operative man/minicomputer interaction	A75-42856
MOLECULAR BIOLOGY	
Nonlinear mathematical models for the origin of asymmetry in biological molecules	A75-43889
MOLECULAR INTERACTIONS	
The temperature dependences of some types of gaseous ionic reactions of astrochemical interest	A75-43891
MOLECULAR SPECTRA	
Fluorescence detection of organic molecules in the Jovian atmosphere	A75-43892
MOMENTS OF INERTIA	
Computer model to determine center of gravity and moments of inertia for protective helmets [AD-A009285]	N75-31751
MOON	
Exobiology of the moon [NASA-TT-F-16378]	N75-31755
MOTION AFTEREFFECTS	
Visual texture as a factor in the apparent velocity of objective motion and motion aftereffects	A75-43500
MOTION PERCEPTION	
Stereovision based on visual persistence	A75-42682
Visual texture as a factor in the apparent velocity of objective motion and motion aftereffects	A75-43500

## SUBJECT INDEX

INVARIANT PROPERTIES OF THE MOTION PARALLAX FIELD DUE TO THE MOVEMENT OF RIGID BODIES RELATIVE TO AN OBSERVER	A75-44650
MOTION SICKNESS	
Human bioassay of antimotion sickness drugs [AD-A009799]	N75-31727
MOTION SICKNESS DRUGS	
Human assay of antimotion sickness drugs	A75-44351
MOTION SIMULATORS	
Aircraft simulator motion and the order of merit of flight attitude and steering guidance displays	A75-43849
Design of a motion simulator with several degrees of freedom for ergonomic studies [DGON PAPER 1]	A75-44110
MOVING TARGET INDICATORS	
Visual time compression - Spatial and temporal cues	A75-43845
MULTIVARIATE STATISTICAL ANALYSIS	
Experiment in the application of multivariate correlation-regression analysis in physiological studies	A75-44167
MUSCULAR FUNCTION	
Effect of the functional state of the central nervous system on the formation of an elementary motor response /from EEG correlation analysis data/	A75-42808
Leg muscle metabolism during exercise in the heat and cold	A75-43437
Coronary artery cyclic AMP content during adrenergic receptor stimulation	A75-43941
MUSCULOSKELETAL SYSTEM	
Effect of exercise on lipoprotein lipase activity in rat heart and skeletal muscle	A75-43944
MUTATIONS	
The effect of ionizing radiations with different LET on survival and mutation in Chlorella	A75-44148
MYOCARDIAL INFARCTION	
Myocardial calcium in experimental myocardial infarction	A75-43275
MYOCARDIUM	
Effect of norepinephrine on myocardial intracellular hydrogen ion concentration	A75-43943
Effect of exercise on lipoprotein lipase activity in rat heart and skeletal muscle	A75-43944
<b>N</b>	
NARCOSIS	
Cognitive and psychomotor performance during NOAA OPS 1 and 2 --- diver performance in nitrogen habitat [AD-A005643]	N75-30791
NATURAL SATELLITES	
Consideration of probability of bacterial growth for Jovian planets and their satellites	A75-44139
NAVIGATION INSTRUMENTS	
ROBNAV - A range-based robot navigation and obstacle avoidance algorithm	A75-42903
NEURAL NETS	
Organization principles of the neural code of individual psychic activity	A75-42804
Cooperative mechanisms for the sensitivity of brain tissue to external and internal electric fields	A75-42805
ABSTRACTION AND ENCODING OF SENSORY INFORMATION	N75-30783
NEUROMUSCULAR TRANSMISSION	
Ventral midbrain stimulation, blood pressure responses and their relation to the dopaminergic nigro-striatal pathways	A75-41913

**NEUROSES**  
 Microelectrode investigation of the neuronal mechanisms of voluntary mnemonic activity in man A75-42803

Quantitative cyto- and histochemical studies of the Deiters' nucleus and nodular cortex of cerebellum in rats exposed to weightlessness A75-44352

**NEUROPHYSIOLOGY**  
 Adaptation of brain monoamine synthesis to hypoxia in the rat A75-42756

Specific and general mechanisms of brain support of psychic activity in man and prospects of this problem A75-42801

Human physiology and the science of psychology /formulation of the problem/ A75-42802

Microelectrode investigation of the neuronal mechanisms of voluntary mnemonic activity in man A75-42803

Organization principles of the neural code of individual psychic activity A75-42804

Fundamental differences in the informative significance and the physiological meaning of slow electrical processes in the human brain for different measurement ranges of the potential A75-42806

Functional changes in the deep structures of the human brain during long-term operative memory tests A75-42807

Mechanism of the adaptation of the auditory apparatus to an acoustic load A75-42811

A structural method for investigation of slow fluctuations in the human brain A75-42815

An evaluation of electroanesthesia and electrosleep [PE-241305/2] N75-30787

**NEW HAMPSHIRE**  
 Phytoplankton populations in relation to different trophic levels at Winnipesaukee Lake, New Hampshire, USA [PB-240981/1] N75-31709

**NICKEL CADMIUM BATTERIES**  
 A multichannel implantable telemetry system for flow, pressure, and ECG measurements A75-42767

A long-lived, reliable, rechargeable cardiac pacemaker N75-31712

**NITROGEN METABOLISM**  
 Nitrogen exchange across the lungs in resting man A75-44621

**NOISE (SOUND)**  
 Exploitation of central mechanisms in listening to noisy speech [AD-A009886] N75-31734

**NOISE POLLUTION**  
 Noise and Speech Interference: Proceedings of Minisymposium [NASA-TM-X-72696] N75-31731

**NOISE REDUCTION**  
 A study of proposed ear protection devices for low frequency noise attenuation [AD-A009274] N75-31750

**NOISE TOLERANCE**  
 Noise in space --- effect on Skylab astronauts A75-42707

Influence of auditory fatigue on the perception of speech under conditions of intense low-frequency noise A75-44511

**NOREPINEPHRINE**  
 Effect of norepinephrine on myocardial intracellular hydrogen ion concentration A75-43943

Biogenic amines and acute thermal stress in the rat A75-43975

Effect of exogenous catecholamines on heart rate and thermoregulation in the hibernating hedgehog (Erinaceus europaeus L.). [NASA-TT-P-16533] N75-30776

**Numerical Analysis**  
 A numerical study of pulsatile flow through constricted arteries A75-42192

**Numerical Control**  
 A program-controlled device for operative man/minicomputer interaction A75-42856

Concept of algorithmic control for a class of large systems A75-45054

**Nystagmus**  
 Optokinetic nystagmus during selective retinal stimulation A75-43350

Saccadic suppression in the monkey A75-43425

Effect of linear acceleration on nystagmic response induced by angular acceleration A75-44049

**O**

**OLEIC ACID**  
 Turnover of free fatty acids during recovery from exercise A75-42759

**OPERATOR PERFORMANCE**  
 The application of human operator describing functions to studies on the effects of alcohol and marijuana on human performance A75-42902

A family of models for measuring human reliability A75-44212

Psychophysical models for signal detection with time varying uncertainty [NASA-CR-137734] N75-30788

Modeling the saturation level of a human radar operator [AD-A009203] N75-31736

**OPERATORS (PEOPLE)**  
 Optimal multimodal parameter identification in the state space model of the human operator [AD-A008707] N75-30793

**OPTICAL ACTIVITY**  
 The origin of optical asymmetry on earth A75-43888

Nonlinear mathematical models for the origin of asymmetry in biological molecules A75-43889

Asymmetric adsorption by quartz - A model for the prebiotic origin of optical activity A75-43890

Is the detection of optical activity in extraterrestrial samples a safe indicator for life A75-44133

**OPTICAL EQUIPMENT**  
 The Mark 3 Haploscope [NASA-CR-2584] N75-30778

**OPTICAL ILLUSION**  
 Stereoillusion based on visual persistence A75-42682

**OPTICAL TRACKING**  
 Optokinetic nystagmus during selective retinal stimulation A75-43350

Motion relationships in aircraft attitude and guidance displays - A flight experiment A75-43848

**ORGANIC COMPOUNDS**  
 Fluorescence detection of organic molecules in the Jovian atmosphere A75-43892

Exponential kinetics of formation of organic microstructures A75-43897

**ORTHOSTATIC TOLERANCE**  
 Cardiorespiratory responses to orthostasis and the effects of propranolol A75-44360

**OTOLARYNGOLOGY**  
 Recent advances in aerospace medicine [AD-A009132] N75-31718

**OTOLITH ORGANS**  
 Effect of linear acceleration on nystagmic response induced by angular acceleration A75-44049

## OUTER PLANETS EXPLORERS

Techniques for avoiding biological contamination of the outer planets by atmospheric probes [AIAA PAPER 75-1164] A75-44269

**OUTGASSING**  
Contaminant evaluation of helicopter oxygen system [AD-A006139] B75-30800

**OXYGEN BREATHING**  
Effects of hyperoxic gas mixtures on energy metabolism during prolonged work A75-42761

Sensitivity of GABA synthesis in human brain to oxygen poisoning A75-44358

Maximal oxygen uptake during treadmill walking and running at various speeds A75-45124

**OXYGEN CONSUMPTION**  
Effects of equivalent sea-level and altitude training on maximal oxygen uptake and running performance A75-42760

Experimental study of the performance of competition swimmers A75-43435

Nitrogen exchange across the lungs in resting man A75-44621

**OXYGEN METABOLISM**  
Adaptation of brain monoamine synthesis to hypoxia in the rat A75-42756

Anaerobic recovery in man --- following supramaximal exercise A75-43434

Leg muscle metabolism during exercise in the heat and cold A75-43437

**OXYGEN REGULATORS**  
A graphical summary of oxygen regulator performance [AD-A009134] B75-31749

**OXYGEN SUPPLY EQUIPMENT**  
Contaminant evaluation of helicopter oxygen system [AD-A006139] B75-30800

**OXYGEN TENSION**  
A structural method for investigation of slow fluctuations in the human brain A75-42815

Stimulus interaction in the responses of carotid body chemoreceptor single afferent fibers --- to independent hypoxic and hypercapnic stimuli A75-44619

Relationship between carotid chemoreceptor activity and ventilation in the cat --- to combined hypoxic and hypercapnic stimuli A75-44620

**OXYHEMOGLOBIN**  
Ethanol-induced lowering of arterial oxyhemoglobin saturation during hypoxia A75-44353

## P

## PARALLAX

Invariant properties of the motion parallax field due to the movement of rigid bodies relative to an observer A75-44650

## PARAMECIUM

Effects of space balloon flights on reproductive activity in *Paramecium aurelia* A75-44147

## PARASITIC DISEASES

Surveillance of some infectious diseases among aircrrew personnel in Southeast Asia A75-44357

## PARTICLE FLUX DENSITY

Flux of high-LET cosmic-ray particles in manned space flight A75-44140

## PARTICLE SIZE DISTRIBUTION

Quantitative relationship between airborne viable and total particles A75-42799

## PARTICULATE SAMPLING

Quantitative relationship between airborne viable and total particles A75-42799

## PATHOLOGICAL EFFECTS

Experimental cardiac necrosis in hypobaric and anemic hypoxia A75-42755

## PDP COMPUTERS

The development of a real-time electrocardiogram analyzing system using the PDP-15 computer [AD-A008672] B75-30784

## PERFORMANCE PREDICTION

Exploratory analysis of predictors of diver performance decrement during 3 hour cold water exposures [AD-A009359] B75-31724

## PERFORMANCE TESTS

The application of human operator describing functions to studies on the effects of alcohol and marijuana on human performance A75-42902

## PERIPHERAL CIRCULATION

Effect of thymus extract on granulocyte content in the peripheral blood A75-45071

## PERMEABILITY

Differential permeation of artemia cysts and cucumber seeds by alcohols A75-42828

## PERSPIRATION

Use of dew-point detection for quantitative measurement of sweating rate A75-45127

## PHARMACOLOGY

Ventral midbrain stimulation, blood pressure responses and their relation to the dopanergic nigro-striatal pathways A75-41913

Biogenic amines and acute thermal stress in the rat A75-43975

Human assay of antimotion sickness drugs A75-44351

Cardiorespiratory responses to orthostasis and the effects of propranolol A75-44360

Effects of Pyrobenzamine and Plimasin on fighter pilots flying a fighter intercept mission in the F4D flight simulator A75-44364

Symposium on Temperature Regulation and Drug Action [AD-A006372] B75-30780

## PHOTOGRAPHIC FILM

Evaluation of slide-tape lecture programs used in aero laboratories [AD-A009571] B75-31741

## PHOTOGRAPHIC RECORDING

High-speed holography of vibrating objects and rapid events --- ultrasonic bonders and eardrums A75-42578

## PHOTOSENSITIVITY

Increment spectral sensitivity and colour discrimination in the primate, studied by means of graded potentials from the striate cortex A75-43422

## PHOTOSYNTHESIS

On the evolution of the photosynthetic pigments A75-43898

## PHYSICAL EXERCISE

Sleep patterns after graded exercise A75-42753

Turnover of free fatty acids during recovery from exercise A75-42759

Effects of equivalent sea-level and altitude training on maximal oxygen uptake and running performance A75-42760

Effects of hyperoxic gas mixtures on energy metabolism during prolonged work A75-42761

Anaerobic recovery in man --- following supramaximal exercise A75-43434

Ammonia production following maximal exercise - Treadmill vs. bicycle testing A75-43436

Leg muscle metabolism during exercise in the heat and cold A75-43437

Effect of exercise on lipoprotein lipase activity in rat heart and skeletal muscle A75-43944

Cardiac glycogen in Long-Evans rats - Diurnal pattern and response to exercise	A75-43945	Ammonia production following maximal exercise - Treadmill vs. bicycle testing	A75-43436
Frequency characteristics of the regulatory systems of the heart	A75-44051	Human assay of antinotion sickness drugs	A75-44351
Experiment in the application of multivariate correlation-regression analysis in physiological studies	A75-44167	Hematologic changes in mice during and after exposure to severe hypobaric hypoxia	A75-44356
Ability of man to detect increases in his breathing	A75-45123	Effects in rodents of a 1-month exposure to magnetic fields /200-1200 gauss/	A75-44355
<b>PHYSICAL FITNESS</b>		Cardiorespiratory responses to orthostasis and the effects of propranolol	A75-44360
Prediction of body composition in habitually active middle-aged men	A75-42757	Ability of man to detect increases in his breathing	A75-45123
<b>PHYSICAL WORK</b>		Use of dew-point detection for quantitative measurement of sweating rate	A75-45127
Experimental study of the performance of competition swimmers	A75-43435	<b>PIGMENTS</b>	
<b>PHYSIOLOGICAL EFFECTS</b>		On the evolution of the photosynthetic pigments	A75-43898
Physiological effects of long time sitting	A75-43004	<b>PILOT PERFORMANCE</b>	
Human sensitivity to gravity - On the problem of gravipreferendum	A75-44127	The transition of experienced pilots to a frequency-separated aircraft attitude display	A75-43850
In vivo measurement of human body composition [NASA-CR-143375]	N75-30774	Effects of aircraft simulator motion cue fidelity on pilot performance [DGON PAPER 1]	A75-44106
Frequency response of the oculovestibular system during yaw oscillation [AD-A009769]	N75-31728	Soft hydrophilic contact lenses in civil and military aviation	A75-44363
<b>PHYSIOLOGICAL RESPONSES</b>		Effects of Pyrobenzamine and Plimasin on fighter pilots flying a fighter intercept mission in the F4D flight simulator	A75-44364
Sleep patterns after graded exercise	A75-42753	New methods and test batteries for the psychological selection of aircrews	A75-44512
Circadian variations in the sweating mechanism	A75-42758	Conspicuity of target lights: The influence of flash rate and brightness --- collision avoidance - visual discrimination/pilot performance, aircraft lights [NASA-TN-D-7961]	N75-31732
Effects of equivalent sea-level and altitude training on maximal oxygen uptake and running performance	A75-42760	<b>PILOT SELECTION</b>	
Effect of the functional state of the central nervous system on the formation of an elementary motor response /from EEG correlation analysis data/	A75-42808	New methods and test batteries for the psychological selection of aircrews	A75-44512
Ammonia production following maximal exercise - Treadmill vs. bicycle testing	A75-43436	The use of the 'reserves' technique in the psychological selection of aircrew students	A75-44513
Cardiac glycogen in Long-Evans rats - Diurnal pattern and response to exercise	A75-43945	Basic attention measures as predictors of success in flight training [AD-A006385]	N75-30789
Response and adaptation of Beagle dogs to hypergravity	A75-44128	<b>PILOT TRAINING</b>	
Gravitational effects on body composition in birds	A75-44129	The use of the 'reserves' technique in the psychological selection of aircrew students	A75-44513
Influence of simulated weightlessness on the rate of anomalies of the flour beetle Tribolium confusum	A75-44131	Behavioral taxonomy of undergraduate pilot training tasks and skills: Executive summary [AD-A008771]	N75-31737
Infrasound - A short review of effects on man	A75-44354	Behavioral taxonomy of undergraduate pilot training tasks and skills: Guidelines and examples for taxonomy application in flying training research [AD-A008897]	N75-31738
Stimulus interaction in the responses of carotid body chemoreceptor single afferent fibers --- to independent hypoxic and hypercapnic stimuli	A75-44619	Transfer of training with formation flight trainer [AD-A009638]	N75-31739
Relationship between carotid chemoreceptor activity and ventilation in the cat --- to combined hypoxic and hypercapnic stimuli	A75-44620	<b>PILOTS</b>	
Maximal oxygen uptake during treadmill walking and running at various speeds	A75-45124	Central nervous system involvement following type I aviator's bends complicated by complacency	A75-44362
A new gas lesion syndrome in man, induced by 'isobaric gas counterdiffusion'	A75-45125	<b>PITUITARY GLAND</b>	
Ventricular function following acute carbon monoxide exposure	A75-45126	Influence of chronic and repeated stress on the pituitary-adrenal system and behavior [NASA-CR-143622]	N75-31713
Role of the hypothalamic neurosecretory system in adaptive reactions of the body: Contribution to the problem of neurohormonal interactions [NASA-TT-F-16329]	N75-31711	<b>PLANETARY ATMOSPHERES</b>	
<b>PHYSIOLOGICAL TESTS</b>		The temperature dependences of some types of gaseous ionic reactions of astrochemical interest	A75-43891
Study of the characteristics of decompressive gas formation with the aid of ultrasound	A75-42263	<b>PLANETARY QUARANTINE</b>	
		Techniques for avoiding biological contamination of the outer planets by atmospheric probes [AIAA PAPER 75-1164]	A75-44269
		<b>PLANKTON</b>	
		Phytoplankton populations in relation to different trophic levels at Winnipesaukee Lake, New Hampshire, USA [PB-240981/1]	N75-31709

## SUBJECT INDEX

## RESPIRATORY PHYSIOLOGY

**RADIATION DISTRIBUTION**  
Distribution effectiveness for space radiation dosimetry A75-44434

**RADIATION DOSAGE**  
The study of the radiation environment in near-earth space --- dose measurements by Cosmos satellites A75-44141

Physical dosimetric evaluations in the Apollo 16 microbial response experiment A75-44142

Cosmic radiation exposure in supersonic and subsonic flight A75-44361

Distribution effectiveness for space radiation dosimetry A75-44434

Lead belt radiation shield [AD-A009181] N75-31721

**RADIATION EFFECTS**  
Cooperative mechanisms for the sensitivity of brain tissue to external and internal electric fields A75-42805

Effects of solar ultraviolet radiations on Bacillus subtilis spores and T-7 bacteriophage A75-44143

Radiobiological results of the Biostack experiment on board Apollo 16 and 17 A75-44144

Results of the Bacillus subtilis unit of the Biostack II experiment - Physical characteristics and biological effects of individual cosmic HZE particles A75-44145

Research progress in radiobiology [AD-A009327] N75-31723

**RADIATION HAZARDS**  
Peculiarities of biological action of hadrons of space radiation A75-44149

Ocular absorption of laser radiation for calculating personnel hazards [AD-A009176] N75-31719

Progress in medical research, including communicable diseases, military dog improvement, radiation injury, and tropical and internal medicine [AD-A008984] N75-31722

Preliminary evaluation of commercially available laser protective eyewear [PE-241903/4] N75-31753

**RADIATION LAWS**  
Cosmic radiation exposure in supersonic and subsonic flight A75-44361

**RADIATION MEASUREMENT**  
Flux of high-LET cosmic-ray particles in manned space flight A75-44140

The study of the radiation environment in near-earth space --- dose measurements by Cosmos satellites A75-44141

**RADIATION PROTECTION**  
Cosmic radiation exposure in supersonic and subsonic flight A75-44361

**RADIATION SHIELDING**  
Lead belt radiation shield [AD-A009181] N75-31721

**RADIATION TOLERANCE**  
Long-wavelength electromagnetic power absorption in prolate spheroidal models of man and animals A75-43271

**RADIATIVE HEAT TRANSFER**  
On differences in sensitivity of the thermoreceptors of the skin to radiative and convective thermal action A75-42997

**RADIOBIOLOGY**  
Sialoproteids of the liver and blood serum in rats exposed to small doses of ionizing radiation A75-42316

Radio-chemical synthesis of amino acids in aqueous media containing carbohydrates, hydrocarbons and nitrates A75-44134

Physical dosimetric evaluations in the Apollo 16 microbial response experiment A75-44142

Radiobiological results of the Biostack experiment on board Apollo 16 and 17 A75-44144

Results of the Bacillus subtilis unit of the Biostack II experiment - Physical characteristics and biological effects of individual cosmic HZE particles A75-44145

The effect of ionizing radiations with different LET on survival and mutation in Chlorella A75-44148

Research progress in radiobiology [AD-A009327] N75-31723

**RADIOGRAPHY**  
The effect of decompression on the alimentary canal A75-42644

**RANGEFINDING**  
ROBNAV - A range-based robot navigation and obstacle avoidance algorithm A75-42903

**RAPID EYE MOVEMENT STATE**  
Sleep patterns after graded exercise A75-42753

**REACTION KINETICS**  
Exponential kinetics of formation of organic microstructures A75-43897

**REACTION TIME**  
Reaction times in the detection of gratings by human observers - A probabilistic mechanism A75-43423

Pacing, product complexity, and task perception in simulated inspection A75-43847

**RECEPTORS (PHYSIOLOGY)**  
Coronary artery cyclic AMP content during adrenergic receptor stimulation A75-43941

**REGRESSION ANALYSIS**  
Experiment in the application of multivariate correlation-regression analysis in physiological studies A75-44167

**RELATIVE BIOLOGICAL EFFECTIVENESS (RBE)**  
The effect of ionizing radiations with different LET on survival and mutation in Chlorella A75-44148

**RELATIVISTIC EFFECTS**  
Invariant properties of the motion parallax field due to the movement of rigid bodies relative to an observer A75-44650

**RELIABILITY ENGINEERING**  
Reliability of life support systems as related to general space flight safety requirements A75-42052

A long-lived, reliable, rechargeable cardiac pacemaker N75-31712

A graphical summary of oxygen regulator performance [AD-A009134] N75-31749

**RESPIRATORY DISEASES**  
A modified measurement of respiratory resistance by forced oscillation during normal breathing A75-42765

**RESPIRATORY IMPEDANCE**  
A modified measurement of respiratory resistance by forced oscillation during normal breathing A75-42765

Effect of inspiratory resistance on occlusion pressure in hypoxia and hypercapnia A75-44618

**RESPIRATORY PHYSIOLOGY**  
Cardiac and respiratory effects of digitalis during chronic hypoxia in intact conscious dogs A75-43942

Effect of norepinephrine on myocardial intracellular hydrogen ion concentration A75-43943

Cardiorespiratory responses to orthostasis and the effects of propranolol A75-44360

Nitrogen exchange across the lungs in resting man A75-44621

**RESPIRATORY RATE**  
 A modified measurement of respiratory resistance by forced oscillation during normal breathing A75-42765  
 Computerized method for analyzing maximum and partial expiratory flow-volume curves A75-42766  
 A high accuracy linear rate meter --- digital design for heart and respiratory rate measurements A75-42768  
 Ability of man to detect increases in his breathing A75-45123  
 Maximal oxygen uptake during treadmill walking and running at various speeds A75-45124

**RESPIRATORY SYSTEM**  
 Analysis of plethysmographic estimation of alveolar pressure A75-42321  
 Simulation of regional lung emptying during slow and forced expirations A75-42754  
 Effects of hyperoxic gas mixtures on energy metabolism during prolonged work A75-42761

**RESPIROMETERS**  
 Multichannel subcarrier ECG, respiration, and temperature biotelemetry system A75-42769

**RETENTION (PSYCHOLOGY)**  
 Functional changes in the deep structures of the human brain during long-term operative memory tests A75-42807

**RETINA**  
 Spontaneous voltage fluctuations in retinal cones and bipolar cells A75-42683  
 Optokinetic nystagmus during selective retinal stimulation A75-43350  
 Evaluation of retinal damage produced by long-term exposure to laser radiation [AD-A008769] N75-30785

**RETINAL IMAGES**  
 Visual masking and saccadic suppression A75-42793

**RHEOENCEPHALOGRAPHY**  
 Development of ultrasonic methods of hemodynamic measurements --- rheoencephalography/flowmeters [NASA-CR-143458] N75-31714

**RIGID STRUCTURES**  
 Invariant properties of the motion parallax field due to the movement of rigid bodies relative to an observer A75-44650

**ROBOTS**  
 ROBNAV - A range-based robot navigation and obstacle avoidance algorithm A75-42903  
 Computer simulation of robot-manipulator control --- Russian book A75-43249

**ROTATING DISKS**  
 Visual texture as a factor in the apparent velocity of objective motion and motion aftereffects A75-43500

**ROTATING ENVIRONMENTS**  
 Human assay of antimotion sickness drugs A75-44351

**RUNNING**  
 Maximal oxygen uptake during treadmill walking and running at various speeds A75-45124

**S**

**SACCADIC EYE MOVEMENTS**  
 Visual masking and saccadic suppression A75-42793  
 Saccadic suppression in the monkey A75-43425

**SACCHAROMYCES**  
 Biochemistry: Investigation of the polyphosphate-synthetase of *saccharomyces cerevisiae* [NASA-TT-F-16457] N75-31708

**SAFETY FACTORS**  
 Habitability of ships [JPRS-65334] N75-30794

**SALYUT SPACE STATION**  
 Life support systems aboard the Soyuz-18-Salyut-4 flight [NASA-TT-F-16500] N75-30797

**SAMPLING**  
 Urine sampling and collection system optimization and testing [NASA-CR-144401] N75-30795

**SATELLITE OBSERVATION**  
 The study of the radiation environment in near-earth space --- dose measurements by Cosmos satellites A75-44141

**SATURN (PLANET)**  
 Consideration of probability of bacterial growth for Jovian planets and their satellites A75-44139

**SEAT BELTS**  
 Strain of human bodies protected by safety belts in simulated frontal crashes [CSIR-TRANS-1196] N75-30779

**SEATS**  
 Posture and seat design for the car driver [BAE-LIB-TRANS-1842] N75-30796

**SEEDS**  
 Modifying effect of dynamic space flight factors on radiation damage of air-dry seeds of *Crepis capillaris* L/ Wallr A75-44146

**SELF ADAPTIVE CONTROL SYSTEMS**  
 Quantitative regulation and information estimates for the systemic activity of the brain A75-42814

**SENSIMOTOR PERFORMANCE**  
 Optimum uses of psychobiological, sensorimotor, and performance measurement strategies --- for industrial safety A75-43844

Motion relationships in aircraft attitude and guidance displays - A flight experiment A75-43848

Eye movement response to simultaneous stimulation of the vestibular and visual receptors A75-44350

The visual-motor-orientation of the diver in the working space depending on experience and water turbidity [DLR-FB-75-35] N75-31733

**SENSORS**  
 Manipulation based on sensor-directed control: An integrated end effector and touch sensing system [NASA-CR-143420] N75-30799

**SENSORY STIMULATION**  
 Correlation between evoked potentials and processes of sensory analysis in man A75-42812

Coronary artery cyclic AMP content during adrenergic receptor stimulation A75-43941

**SEPTUM**  
 Shunt dynamics in experimental atrial septal defects A75-42762

**SHIPS**  
 Habitability of ships [JPRS-65334] N75-30794

**SIGNAL DETECTION**  
 Psychophysical models for signal detection with time varying uncertainty [NASA-CR-137734] N75-30788

**SIGNAL MEASUREMENT**  
 Analog sample/hold circuit for physiological signal monitoring A75-42322

**SITTING POSITION**  
 Physiological effects of long time sitting A75-43004

**SKIN TEMPERATURE (BIOLOGY)**  
 On differences in sensitivity of the thermoreceptors of the skin to radiative and convective thermal action A75-42997

Use of dew-point detection for quantitative measurement of sweating rate A75-45127

<b>SKYLAB PROGRAM</b>		
Noise in space --- effect on Skylab astronauts		
A75-42707		
Skylab IMSS checklist application study for emergency medical care --- emergency medical care operations involving the use and operation of the portable ambulance module [NASA-CR-144394]		
N75-30772		
<b>SLEEP</b>		
Sleep patterns after graded exercise		
A75-42753		
<b>SLEEP DEPRIVATION</b>		
A user oriented review of the literature on the effects of sleep loss, work-rest schedules, and recovery on performance [AD-A009778]		
N75-31726		
<b>SOLAR RADIATION</b>		
Effects of solar ultraviolet radiations on <i>Bacillus subtilis</i> spores and T-7 bacteriophage		
A75-44143		
<b>SOULD INTENSITY</b>		
Mechanism of the adaptation of the auditory apparatus to an acoustic load		
A75-42811		
<b>SOUND LOCALIZATION</b>		
Acoustic Doppler echocardiograph		
A75-43820		
<b>SOUND WAVES</b>		
Infrasound - A short review of effects on man		
A75-44354		
<b>SOUTHEAST ASIA</b>		
Surveillance of some infectious diseases among aircrew personnel in Southeast Asia		
A75-44357		
<b>SOYUZ SPACECRAFT</b>		
Life support systems aboard the Soyuz-18-Salyut-4 flight [NASA-TT-F-16500]		
N75-30797		
<b>SPACE ENVIRONMENT SIMULATION</b>		
Membrane damage in dehydrated bacteria and its repair		
A75-44136		
Modifying effect of dynamic space flight factors on radiation damage of air-dry seeds of <i>Crepis capillaris</i> L/ Wallr		
A75-44146		
<b>SPACE FLIGHT</b>		
The development of seedling shoots under space flight conditions		
A75-44132		
Modifying effect of dynamic space flight factors on radiation damage of air-dry seeds of <i>Crepis capillaris</i> L/ Wallr		
A75-44146		
Peculiarities of biological action of hadrons of space radiation		
A75-44149		
The Mark 3 Baplosccpe [NASA-CR-2584]		
N75-30778		
Assessment of the efficiency of human performance in space flight [JPBS-65477]		
N75-31730		
<b>SPACE FLIGHT FEEDING</b>		
Space garden [NASA-TT-F-16421]		
N75-30769		
<b>SPACE FLIGHT STRESS</b>		
Physical dosimetric evaluations in the Apollo 16 microbial response experiment		
A75-44142		
Effects of the abnormal acceleratory environment of flight [AD-A009593]		
N75-31716		
<b>SPACE PERCEPTION</b>		
The implications of experiments on the perception of space and motion [AD-A009399]		
N75-31740		
<b>SPACE STATIONS</b>		
Vapor compression distillation module [NASA-CR-144424]		
N75-31747		
<b>SPACE SUITS</b>		
On development of a sealed bearing for space suits [NASA-CR-144435]		
N75-31743		
On development of an inexpensive, lightweight thermal micrometeoroid garment for space suits [NASA-CR-144428]		
N75-31745		
<b>SPACECRAFT CONTAMINATION</b>		
Quantitative relationship between airborne viable and total particles		
A75-42799		
		New methodology for assessing the probability of contaminating Mars
		A75-44138
<b>SPACECRAFT ENVIRONMENTS</b>		
Noise in space --- effect on Skylab astronauts		
A75-42707		
Distribution effectiveness for space radiation dosimetry		
A75-44434		
<b>SPACECRAFT STERILIZATION</b>		
Techniques for avoiding biological contamination of the outer planets by atmospheric probes [AIAA PAPER 75-1164]		
A75-44269		
<b>SPECTROMETERS</b>		
A program-controlled device for operative man/minicomputer interaction		
A75-42856		
<b>SPEECH</b>		
Influence of auditory fatigue on the perception of speech under conditions of intense low-frequency noise		
A75-44511		
<b>SPEECH RECOGNITION</b>		
Exploitation of central mechanisms in listening to noisy speech [AD-A009886]		
N75-31734		
<b>SPHYSIOGRAPHY</b>		
Special report: Occlusive cuff controller [NASA-CR-144430]		
N75-31744		
<b>SPOROS</b>		
Effects of solar ultraviolet radiations on <i>Bacillus subtilis</i> spores and T-7 bacteriophage		
A75-44143		
<b>STEREOCHEMISTRY</b>		
The origin of optical asymmetry on earth		
A75-43888		
<b>STEREOSCOPIC VISION</b>		
Stereoeffusion based on visual persistence		
A75-42682		
<b>STETHOSCOPES</b>		
Electronic auscultation in telemedicine [PB-242009/9]		
N75-31717		
<b>STOCHASTIC PROCESSES</b>		
A family of models for measuring human reliability		
A75-44212		
<b>STRATOSPHERE RADIATION</b>		
Effects of space balloon flights on reproductive activity in <i>Paramecium aurelia</i>		
A75-44147		
<b>STRESS (PHYSIOLOGY)</b>		
Turnover of free fatty acids during recovery from exercise		
A75-42759		
Experiment in the application of multivariate correlation-regression analysis in physiological studies		
A75-44167		
Blood flow and pressure telemetry [AD-A008885]		
N75-30781		
Effects of the abnormal acceleratory environment of flight [AD-A009593]		
N75-31716		
A user oriented review of the literature on the effects of sleep loss, work-rest schedules, and recovery on performance [AD-A009778]		
N75-31726		
<b>STRESS CONCENTRATION</b>		
Influence of chronic and repeated stress on the pituitary-adrenal system and behavior [NASA-CR-143622]		
N75-31713		
<b>STROBOSCOPES</b>		
Stereoeffusion based on visual persistence		
A75-42682		
<b>SUGARS</b>		
Sialoproteids of the liver and blood serum in rats exposed to small doses of ionizing radiation		
A75-42316		
<b>SUPERSONIC FLIGHT</b>		
Cosmic radiation exposure in supersonic and subsonic flight		
A75-44361		
<b>SWEAT</b>		
Circadian variations in the sweating mechanism		
A75-42758		
<b>SWIMMING</b>		
Experimental study of the performance of competition swimmers		
A75-43435		

<b>SYMPATHETIC NERVOUS SYSTEM</b>	
Autonomic nervous system and adaptation to cold in man	A75-42752
<b>SYSTEMS ANALYSIS</b>	
Quantitative regulation and information estimates for the systemic activity of the brain	A75-42814
<b>T</b>	
<b>TACHYCARDIA</b>	
Autonomic nervous system and adaptation to cold in man	A75-42752
<b>TARGET ACQUISITION</b>	
Alternative approaches to modeling visual target acquisition	
[AD-B000465]	N75-31735
<b>TARGET RECOGNITION</b>	
Visual time compression - Spatial and temporal cues	A75-43845
The effect of target surround density on visual search performance	A75-43846
Conspicuity of target lights: The influence of flash rate and brightness --- collision avoidance - visual discrimination/pilot performance, aircraft lights	
[ NASA-TN-D-7961 ]	N75-31732
<b>TASK COMPLEXITY</b>	
Pacing, product complexity, and task perception in simulated inspection	A75-43847
Assessment of the efficiency of human performance in space flight	
[ JPRS-65477 ]	N75-31730
<b>TAXONOMY</b>	
Behavioral taxonomy of undergraduate pilot training tasks and skills: Executive summary	
[ AD-A008771 ]	N75-31737
Behavioral taxonomy of undergraduate pilot training tasks and skills: Guidelines and examples for taxonomy application in flying training research	
[ AD-A008897 ]	N75-31738
<b>TECHNOLOGY UTILIZATION</b>	
Skylab IMSS checklist application study for emergency medical care --- emergency medical care operations involving the use and operation of the portable ambulance module	
[ NASA-CR-144394 ]	N75-30772
<b>TELECOMMUNICATION</b>	
Electronic auscultation in telemedicine	
[ PE-242009/9 ]	N75-31717
<b>TEMPERATURE COMPENSATION</b>	
Autonomic nervous system and adaptation to cold in man	A75-42752
<b>TEMPERATURE CONTROL</b>	
Thermal control extravehicular life support system	
[ NASA-CR-144425 ]	N75-31746
<b>TEMPERATURE EFFECTS</b>	
Leg muscle metabolism during exercise in the heat and cold	
A75-43437	
The temperature dependences of some types of gaseous ionic reactions of astrochemical interest	
A75-43891	
Effects of high temperature on maintenance performance	
[ AD-A009295 ]	N75-31720
<b>TEMPERATURE MEASUREMENT</b>	
Use of dew-point detection for quantitative measurement of sweating rate	
A75-45127	
<b>TERMAL PROTECTION</b>	
On development of an inexpensive, lightweight thermal micrometeoroid garment for space suits	
[ NASA-CR-144428 ]	N75-31745
<b>TERMAL STRESSES</b>	
Leg muscle metabolism during exercise in the heat and cold	
A75-43437	
<b>TERMORECEPTORS</b>	
On differences in sensitivity of the thermoreceptors of the skin to radiative and convective thermal action	
A75-42997	
<b>THERMOREGULATION</b>	
Circadian variations in the sweating mechanism	
A75-42758	
Biogenic amines and acute thermal stress in the rat	
A75-43975	
Experiment in the application of multivariate correlation-regression analysis in physiological studies	
A75-44167	
Effect of exogenous catecholamines on heart rate and thermoregulation in the hibernating hedgehog ( <i>Erinaceus europaeus</i> L.).	
[ NASA-TT-F-16533 ]	N75-30776
Symposium on Temperature Regulation and Drug Action [AD-A006372]	
N75-30780	
<b>THRESHOLDS (PERCEPTION)</b>	
Mechanism of the adaptation of the auditory apparatus to an acoustic load	
A75-42811	
Identification and measurement of intellective load carrying thresholds	
[ AD-A009159 ]	N75-31742
<b>THYMUS GLAND</b>	
Effect of thymus extract on granulocyte content in the peripheral blood	
A75-45071	
<b>THYROIDINE</b>	
Circadian variations in concentrations of plasma thyroxine and triiodothyronine in man	
A75-42764	
<b>TIMBER VIGOR</b>	
The introduction of mycorrhizal fungi into forested areas of Veronezh region (oblast)	
[ NASA-TT-F-16481 ]	N75-30767
<b>TITAN</b>	
Consideration of probability of bacterial growth for Jovian planets and their satellites	
A75-44139	
<b>TOLEBRANCES (PHYSIOLOGY)</b>	
Some considerations of the theoretical limits for living organisms	
A75-44135	
<b>TOXIC HAZARDS</b>	
Contaminant evaluation of helicopter oxygen system	
[ AD-A006139 ]	N75-30800
<b>TRACKING (POSITION)</b>	
Optimal multimodal parameter identification in the state space model of the human operator	
[ AD-A008707 ]	N75-30793
<b>TRAINING DEVICES</b>	
Transfer and use of training technology: A model for matching training approaches with training settings	
[ AD-A005816 ]	N75-30790
Transfer of training with formation flight trainer	
[ AD-A009638 ]	N75-31739
<b>TRAINING SIMULATORS</b>	
Effects of aircraft simulator motion cue fidelity on pilot performance	
[ DGON PAPER 1 ]	A75-44106
The use of the 'reserves' technique in the psychological selection of aircrew students	
A75-44513	
<b>TRANSIENT OSCILLATIONS</b>	
Microholography - Interferometric investigation of deformations of the eardrum of guinea pigs undergoing transient sound effects	
A75-42580	
<b>TRANSIENT RESPONSE</b>	
Sustained and transient channels in human vision	
A75-43424	
<b>TREADMILLS</b>	
Maximal oxygen uptake during treadmill walking and running at various speeds	
A75-45124	
<b>TRIBOLIA</b>	
Influence of simulated weightlessness on the rate of anomalies of the flour beetle <i>Tribolium confusum</i>	
A75-44131	
<b>TRYPTAMINES</b>	
Biogenic amines and acute thermal stress in the rat	
A75-43975	
<b>TURBIDITY</b>	
The visual-motor-orientation of the diver in the working space depending on experience and water turbidity	
[ DLB-FB-75-35 ]	N75-31733

## U

**ULTRASONIC TESTS**  
Study of the characteristics of decompressive gas formation with the aid of ultrasound A75-42263

**ULTRASONIC WAVE TRANSDUCERS**  
Diagnostic accuracy of an ultrasonic multiple transducer cardiac imaging system A75-42775

**ULTRASOICS**  
Development of ultrasonic methods of hemodynamic measurements --- rheoencephalography/flowmeters [NASA-CR-143458] N75-31714

**ULTRAVIOLET RADIATION**  
Effects of solar ultraviolet radiations on *Bacillus subtilis* spores and T-7 bacteriophage A75-44143

**UNDERWATER TESTS**  
The visual-motor-orientation of the diver in the working space depending on experience and water turbidity [DLR-FB-75-35] N75-31733

**UNIDENTIFIED FLYING OBJECTS**  
Stanford workshop on extraterrestrial civilization - Opening a new scientific dialog A75-43900

**URINALYSIS**  
Metabolic studies of transient tyrosinemia in premature infants A75-42830

Urine sampling and collection system optimization and testing [NASA-CR-144401] N75-30795

## V

**VACUUM EFFECTS**  
Membrane damage in dehydrated bacteria and its repair A75-44136

**VAPOR PRESSURE**  
Vapor compression distillation module [NASA-CR-144424] N75-31747

**VECTORCARDIOGRAPHY**  
The sequence of normal recovery of excitability in the dog heart A75-42360

**VEGETABLES**  
Space garden [NASA-TT-F-16421] N75-30769

**VELOCITY MEASUREMENT**  
Visual texture as a factor in the apparent velocity of objective motion and motion aftereffects A75-43500

**VENTILATION**  
Effect of inspiratory resistance on occlusion pressure in hypoxia and hypercapnia A75-44618

Relationship between carotid chemoreceptor activity and ventilation in the cat --- to combined hypoxic and hypercapnic stimuli A75-44620

Ability of man to detect increases in his breathing A75-45123

**VERBAL COMMUNICATION**  
Specific and general mechanisms of brain support of psychic activity in man and prospects of this problem A75-42801

Organization principles of the neural code of individual psychic activity A75-42804

Noise and Speech Interference: Proceedings of Minisymposium [NASA-TM-X-72696] N75-31731

**VERTEBRATES**  
Comparative anatomy of the audio-vestibular organ [NASA-TT-F-16456] N75-30773

**VERTICAL PERCEPTION**  
Stereoeffusion based on visual persistence A75-42682

**VERTIGO**  
Advanced spatial disorientation training concepts [AE-A008768] N75-30786

**VESTIBULAR NYSTAGMUS**  
Frequency response of the oculovestibular system during yaw oscillation [AD-A009769] N75-31728

**VESTIBULAR TESTS**  
Eye movement response to simultaneous stimulation of the vestibular and visual receptors A75-44350

Advanced spatial disorientation training concepts [AD-A008768] N75-30786

**VESTIBULES**  
Comparative anatomy of the audio-vestibular organ [NASA-TT-F-16456] N75-30773

**VIABILITY**  
Some considerations of the theoretical limits for living organisms A75-44135

**VIBRATION EFFECTS**  
Modifying effect of dynamic space flight factors on radiation damage of air-dry seeds of *Crepis capillaris* /L/ Wallr A75-44146

**VIBRATION MEASUREMENT**  
High-speed holography of vibrating objects and rapid events --- ultrasonic benders and eardrums A75-42578

**VISUAL ACUITY**  
The Mark 3 Haploscope [NASA-CR-2584] N75-30778

**VISUAL DISCRIMINATION**  
Correlation between evoked potentials and processes of sensory analysis in man A75-42812

Increment spectral sensitivity and colour discrimination in the primate, studied by means of graded potentials from the striate cortex A75-43422

The effect of target surround density on visual search performance A75-43846

Conspicuity of target lights: The influence of flash rate and brightness --- collision avoidance - visual discrimination/pilot performance, aircraft lights [NASA-TM-D-7961] N75-31732

**VISUAL PERCEPTION**  
Stereoeffusion based on visual persistence A75-42682

Visual texture as a factor in the apparent velocity of objective motion and motion aftereffects A75-43500

Visual time compression - Spatial and temporal cues A75-43845

Abstraction and encoding of sensory information [AD-A008929] N75-30783

Design and construction of a computer controllable multi-chromatic stimulus for human visual system testing and modeling [AD-A008678] N75-31729

Alternative approaches to modeling visual target acquisition [AD-B000465] N75-31735

**VISUAL PHOTOMETRY**  
The Mark 3 Haploscope [NASA-CR-2584] N75-30778

**VISUAL STIMULI**  
The electrical response of the human eye to sinusoidal light stimulation A75-42320

Spontaneous voltage fluctuations in retinal cones and bipolar cells A75-42683

Visual masking and saccadic suppression A75-42793

Optokinetic nystagmus during selective retinal stimulation A75-43350

Reaction times in the detection of gratings by human observers - A probabilistic mechanism A75-43423

Sustained and transient channels in human vision A75-43424

Saccadic suppression in the monkey A75-43425

Eye movement response to simultaneous stimulation of the vestibular and visual receptors A75-44350

**VISUAL TASKS**

Pacing, product complexity, and task perception in simulated inspection

A75-43847

The visual-motor-orientation of the diver in the working space depending on experience and water turbidity

[DLR-FB-75-35]

N75-31733

**VOICE COMMUNICATION**

Influence of auditory fatigue on the perception of speech under conditions of intense low-frequency noise

A75-44511

**W****WAKEFULNESS**

Statistical properties of the random field of brain biopotentials in man

A75-42809

**WALKING**

Relationship among the kinematic characteristics of human walking

A75-42813

Maximal oxygen uptake during treadmill walking and running at various speeds

A75-45124

**WATER**

The visual-motor-orientation of the diver in the working space depending on experience and water turbidity

[DLR-FB-75-35]

N75-31733

**WATER POLLUTION**

Phytoplankton populations in relation to different trophic levels at Winnipesaukee Lake, New Hampshire, USA

[PE-240981/1]

N75-31709

**WEIGHT MEASUREMENT**

Prediction of body composition in habitually active middle-aged men

A75-42757

**WEIGHTLESSNESS**

Quantitative cyto- and histochemical studies of the Deiters' nucleus and nodular cortex of cerebellum in rats exposed to weightlessness

A75-44352

**WEIGHTLESSNESS SIMULATION**

Influence of simulated weightlessness on the rate of anomalies of the flour beetle *Tribolium confusum*

A75-44131

**WORK-REST CYCLE**

Turnover of free fatty acids during recovery from exercise

A75-42759

**Y****YAW**

Frequency response of the oculovestibular system during yaw oscillation

[AD-A009769]

N75-31728

**Z****ZEOLITES**

Synthesis of biological molecules on molecular sieves --- abioogenic amino acid production

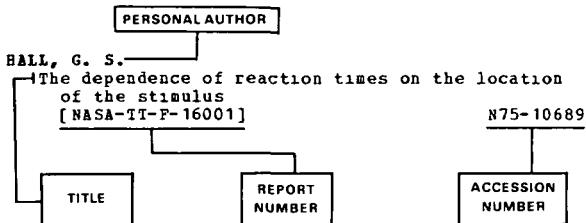

A75-43893

# PERSONAL AUTHOR INDEX

AEROSPACE MEDICINE AND BIOLOGY / A Continuing Bibliography (Suppl 148)

DECEMBER 1975

## Typical Personal Author Index Listing

The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable a report number is also included as an aid in identifying the document.

## A

ABILDSKOV, J. A.  
The sequence of normal recovery of excitability in the dog heart A75-42360

ADAMOVICH, B. A.  
Reliability of life support systems as related to general space flight safety requirements A75-42052

ADAMS, W. C.  
Effects of equivalent sea-level and altitude training on maximal oxygen uptake and running performance A75-42760

ADEY, W. R.  
Cooperative mechanisms for the sensitivity of brain tissue to external and internal electric fields A75-42805

AKATOV, Y. A.  
The study of the radiation environment in near-earth space A75-44141

AKOEV, I. G.  
Peculiarities of biological action of hadrons of space radiation A75-44149

ALBE, F.  
Microholography - Interferometric investigation of deformations of the eardrum of guinea pigs undergoing transient sound effects A75-42580

ALEXANDER, J. A.  
Shunt dynamics in experimental atrial septal defects A75-42762

ALLEN, B. G.  
Evaluation of retinal damage produced by long-term exposure to laser radiation [AD-A008769] N75-30785

ALLKOPEK, O. C.  
Radiobiological results of the Biostack experiment on board Apollo 16 and 17 A75-44144

ALLUSSI, E. A.  
Optimum uses of psychobiological, sensorimotor, and performance measurement strategies A75-43844

AMBROSOLI, G.  
Anaerobic recovery in man A75-43434

AMSTERDAM, E. A.  
Cardiac glycogen in Long-Evans rats - Diurnal pattern and response to exercise A75-43945

ANDRUS, W. S.  
Electronic auscultation in telemedicine [PB-242009/9] N75-31717

ANTHONISEN, N. B.  
Effect of inspiratory resistance on occlusion pressure in hypoxia and hypercapnia A75-44618

ANTONOV, A. G.  
Influence of auditory fatigue on the perception of speech under conditions of intense low-frequency noise A75-44511

## B

BABIBAK, S. P.  
Effect of exercise on lipoprotein lipase activity in rat heart and skeletal muscle A75-43944

BAEVSKII, B. M.  
Characteristics of the regulation of cardiac rhythm during mental work A75-44050

BAILEY, J. V.  
Flux of high-LET cosmic-ray particles in manned space flight A75-44140

Physical dosimetric evaluations in the Apollo 16 microbial response experiment A75-44142

BAKER, J. T.  
Special report: Occlusive cuff controller [NASA-CR-144430] N75-31744

BAKRBIEVA, N.  
Primary catalytic systems of biogenesis and structure-functional evolution of biocatalysers A75-43895

BALASHOVA, E. G.  
Eye movement response to simultaneous stimulation of the vestibular and visual receptors A75-44350

BALINT, D. B.  
Effects of high temperature on maintenance performance [AD-A009295] N75-31720

BALOVOV, L. I.A.  
Mechanism of the adaptation of the auditory apparatus to an acoustic load A75-42811

BALSAM, A.  
Circadian variations in concentrations of plasma thyroxine and triiodothyronine in man A75-42764

BANDGREEN, B.  
Noise in space A75-42707

BARABOHO, J.  
Noise in space A75-42707

BARTEL, P. E.  
Sleep patterns after graded exercise A75-42753

BABYSHNIKOV, S. D.  
The use of the 'reserves' technique in the psychological selection of aircrew students A75-44513

BATTERTON, D. L.  
Ammonia production following maximal exercise - Treadmill vs. bicycle testing A75-43436

BAITER, D. J.  
Myocardial calcium in experimental myocardial infarction A75-43275

BEKETEEVA, N. P.  
Specific and general mechanisms of brain support of psychic activity in man and prospects of this problem A75-42801

Organization principles of the neural code of individual psychic activity A75-42804

BELLER, G. A.  
Cardiac and respiratory effects of digitalis during chronic hypoxia in intact conscious dogs A75-43942

BELMONTE, R. B.  
System safety evaluation of life support systems for chemical and biological protective suits [AD-A009312] N75-31752

BEMBOWSKI, B.  
The effect of decompression on the alimentary canal A75-42644

BENTON, E. V.  
Flux of high-LET cosmic-ray particles in manned space flight A75-44140

Physical dosimetric evaluations in the Apollo 16 microbial response experiment A75-44142

BEEGOVY, G. T.  
Assessment of the efficiency of human performance in space flight [JPRS-65477] N75-31730

BEEINGEBE, D. B.  
The transition of experienced pilots to a frequency-separated aircraft attitude display A75-43850

BEEKMAN, R. M.  
Consideration of probability of bacterial growth for Jovian planets and their satellites A75-44139

BEENAUER, E. M.  
Effects of equivalent sea-level and altitude training on maximal oxygen uptake and running performance A75-42760

BEERYBE, P.  
Effects in rodents of a 1-month exposure to magnetic fields /200-1200 gauss/ A75-44359

BERSEADSKII, M. G.  
Frequency characteristics of the regulatory systems of the heart A75-44051

BIRD, K. T.  
Electronic auscultation in telemedicine [PB-242009/9] N75-31717

BISHOP, L.  
Abstraction and encoding of sensory information [AD-A008929] N75-30783

BOCCALONE, B.  
Effects in rodents of a 1-month exposure to magnetic fields /200-1200 gauss/ A75-44359

BOETTHE, B. A.  
Ocular absorption of laser radiation for calculating personnel hazards [AD-A009176] N75-31719

BOLTEKOV, V. A.  
Acoustic Doppler echocardiograph A75-43820

BOMAR, J. B., JR.

# PUBLIC COLLECTIONS OF NASA DOCUMENTS

## DOMESTIC

NASA distributes its technical documents and bibliographic tools to ten special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

**CALIFORNIA**  
University of California, Berkeley  
**COLORADO**  
University of Colorado, Boulder  
**DISTRICT OF COLUMBIA**  
Library of Congress  
**GEORGIA**  
Georgia Institute of Technology, Atlanta  
**ILLINOIS**  
The John Crerar Library, Chicago

**MASSACHUSETTS**  
Massachusetts Institute of Technology, Cambridge  
**MISSOURI**  
Linda Hall Library, Kansas City  
**NEW YORK**  
Columbia University, New York  
**PENNSYLVANIA**  
Carnegie Library of Pittsburgh  
**WASHINGTON**  
University of Washington, Seattle

NASA publications (those indicated by an "\*" following the accession number) are also received by the following public and free libraries

**CALIFORNIA**  
Los Angeles Public Library  
San Diego Public Library  
**COLORADO**  
Denver Public Library  
**CONNECTICUT**  
Hartford Public Library  
**MARYLAND**  
Enoch Pratt Free Library, Baltimore  
**MASSACHUSETTS**  
Boston Public Library  
**MICHIGAN**  
Detroit Public Library  
**MINNESOTA**  
Minneapolis Public Library  
**MISSOURI**  
Kansas City Public Library  
St. Louis Public Library  
**NEW JERSEY**  
Trenton Public Library

**NEW YORK**  
Brooklyn Public Library  
Buffalo and Erie County Public Library  
Rochester Public Library  
New York Public Library  
**OHIO**  
Akron Public Library  
Cincinnati Public Library  
Cleveland Public Library  
Dayton Public Library  
Toledo Public Library  
**OKLAHOMA**  
Oklahoma County Libraries, Oklahoma City  
**TENNESSEE**  
Memphis Public Library  
**TEXAS**  
Dallas Public Library  
Fort Worth Public Library  
**WASHINGTON**  
Seattle Public Library  
**WISCONSIN**  
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 750 Third Avenue, New York, New York, 10017

## EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "\*", from ESRO/ELDO Space Documentation Service, European Space Research Organization, 114, av. Charles de Gaulle, 92-Neuilly-sur-Seine, France.

## NASA CONTINUING BIBLIOGRAPHY SERIES

NUMBER	TITLE	FREQUENCY
NASA SP-7011	AEROSPACE MEDICINE AND BIOLOGY Aviation medicine, space medicine, and space biology	Monthly
NASA SP-7037	AERONAUTICAL ENGINEERING Engineering, design, and operation of aircraft and aircraft components	Monthly
NASA SP-7039	NASA PATENT ABSTRACTS BIBLIOGRAPHY NASA patents and applications for patent	Semiannually
NASA SP-7041	EARTH RESOURCES Remote sensing of earth resources by aircraft and spacecraft	Quarterly
NASA SP-7043	ENERGY Energy sources, solar energy, energy conversion, transport, and storage	Quarterly
NASA SP-7500	MANAGEMENT Program, contract, and personnel management, and management techniques	Annually

*Details on the availability of these publications may be obtained from:*

**SCIENTIFIC AND TECHNICAL INFORMATION OFFICE**

**NATIONAL AERONAUTICS AND SPACE ADMINISTRATION**  
**Washington, D.C. 20546**
